

# Ten Steps to Selecting Master Agents

#### Ten Steps to Selecting Master Agents

- 1. Establish the key roles and responsibilities of master agents
- Chose the selection criteria that will result in a group of master agents that can achieve the results specified in their roles and responsibilities
- Chart the landscape of existing distribution channels, including layers within the value chain, levels of ownership, and areas of exclusivity
- 4. Graph potential players within the distribution channel landscape to required roles and network size to determine which have the most potential as master agents
- 5. Document the value proposition for each potential master agent, realizing that their motivations could vary widely

#### Ten Steps to Selecting Master Agents

- 6. Map the financial infrastructure, seeking to understand the locations of bank branches and ATMs that can be leveraged for liquidity management
- 7. Based on the anchor product, target initial, secondary, and tertiary retail agent locations, as well as a strategy for rolling out the distribution network country-wide
- 8. Chart potential master agents locations against rollout strategy
- 9. Score the agents based on selection criteria, overlap with financial infrastructure, adherence to rollout strategy, and other key factors
- 10. Create a profile of highest ranking potential partners that can be used to prepare a sales presentation for them

## 1. Key Roles and Responsibilities for Master Agents

Business Management	Financial Planning	Sales
<ul> <li>Plan all aspects of business</li> <li>Meet with retail agents on a regular basis to understand their business</li> <li>Track needs for additional training, promotional materials, other tools</li> </ul>	<ul> <li>Develop primary financial statements</li> <li>Perform financial forecasting</li> <li>Reconcile electronic and cash movement at end of each day</li> </ul>	<ul> <li>Recruit new retail agents</li> <li>Develop sales forecasts for their network</li> <li>Motivate agents, and monitor progress against sales goals</li> <li>Report results to MFSP</li> </ul>
Liquidity Management	Training	Compliance
<ul> <li>Ensure that retail agents have sufficient electronic value on their phones</li> <li>Set up system to provide and retrieve cash, as needed by agents</li> </ul>	<ul> <li>Provide initial training on MFSP services</li> <li>Encourage retail agents to attend MFSP special training sessions</li> <li>Ensure retail agents are sufficiently trained</li> </ul>	<ul> <li>Monitor retail agents effectiveness in achieving compliance with MFSP and regulatory policies</li> <li>Follow up on overdue or outstanding documentation</li> </ul>

#### 2. Master Agent Selection Criteria

Every MFSP will have a unique set of selection criteria that are used to assess and select Master Agents that are likely to include:

- Regulatory Criteria
- Business and Operational Criteria
- Location, Location, Location
- Sales and Marketing Criteria
- Motivation Level

Refer to the Master Agent Responsibilities in Part 7 of the Toolkit for more details on these and other roles and responsibilities of Master Agents

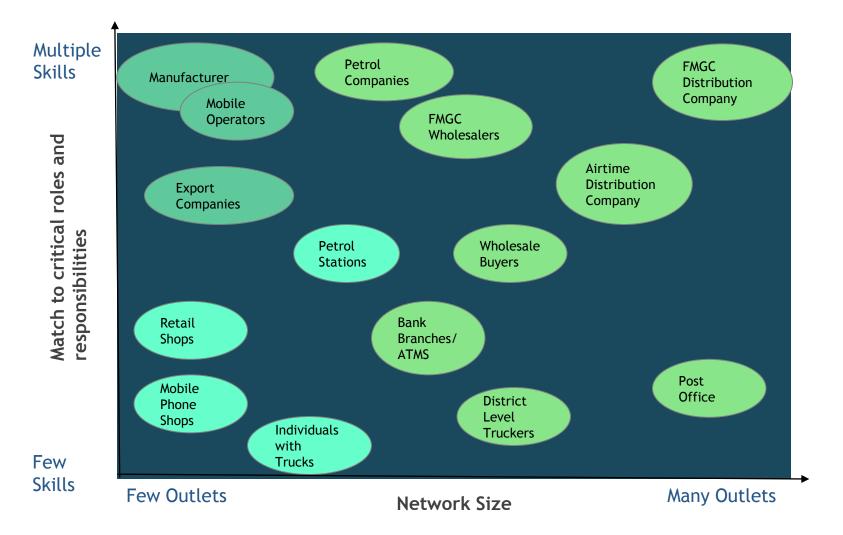

#### 3. Chart the Distribution Landscape

Identify companies, government agencies, and other organizations that move products, money, or services across the country. Be sure to understand the ownership structures across the value chain, which may be surprising. In Mozambique, commodities traders handle scratch card distribution for one of the biggest mobile operators in the country. In PNG, coffee moves money to 400,000 people.

SIM cards and a	airtime	FMCG	Petrol	Export companies	
Mobile Operato	rs	Manufacturers	Petrol stations	Wholesale buyers	
Airtime reseller	ſS	Distributors	Small refilling stops	District level truckers	
Mobile phone sh	nops	Wholesalers		Individuals with trucks	
		Retail shops			
Owned	Fully owned and managed by service provider				
Tied	Not owned but business exclusively or strongly linked to service provider business				
Independent	Independent				

#### 4. Graph Players to Identify Highest Potential Candidates

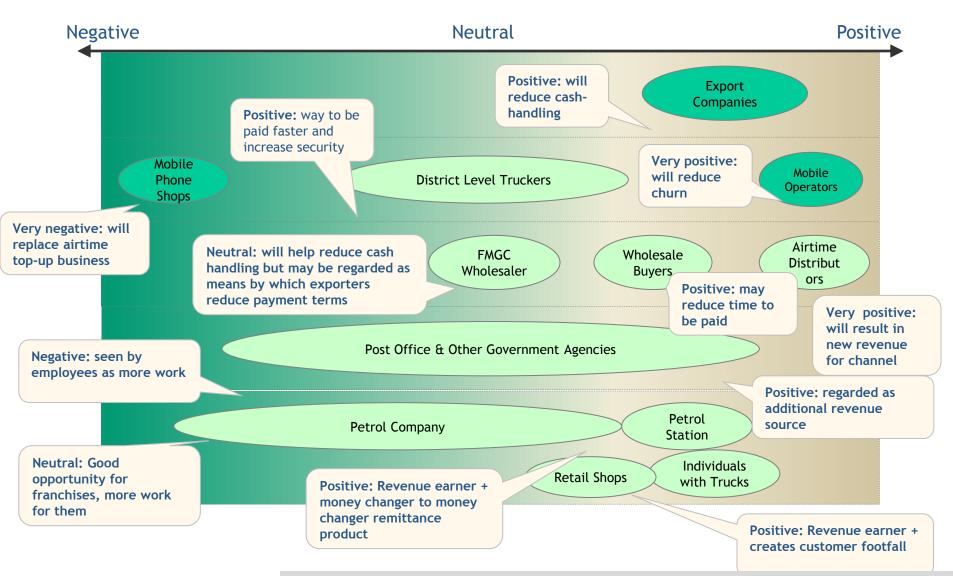

Potential Master Agents and Potential Retail Agents can be targeted through a process

that maps ability to perform the required roles against geographic reach

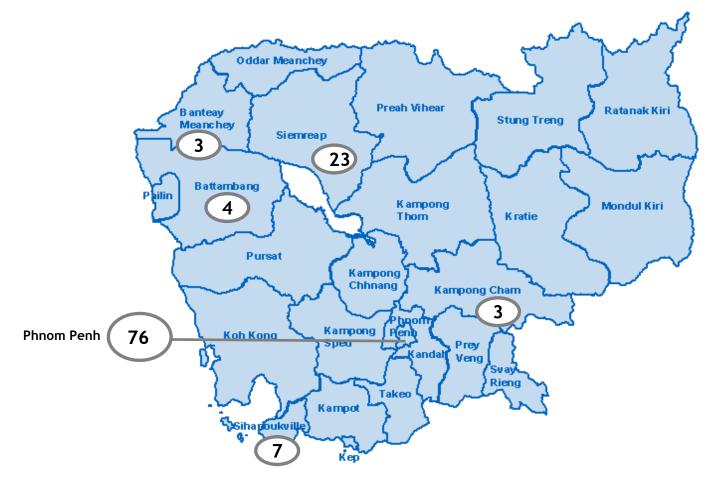

### 5. Document Value Propositions for Potential Agents

Refer to the Master Agent Value Proposition in Part 8 of the Toolkit for additional insight into motivations for these companies or individuals

#### 6. Map Bank Branches and ATM Networks

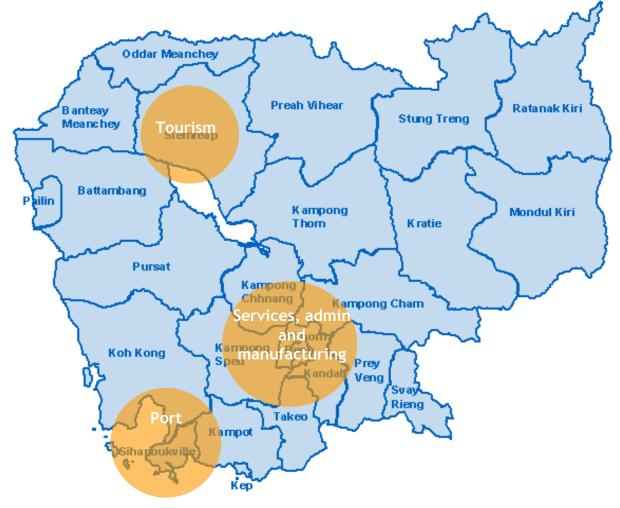

Bank branches, ATM networks, and microfinance networks can be a vitally important part of the agent infrastructure. In addition to adding more cash-in/cash-out points, these locations can be utilized to manage liquidity more effectively. Integration of this network is particularly important in the early stages of network build-out.

#### 7. Target Centers of Economic Activity

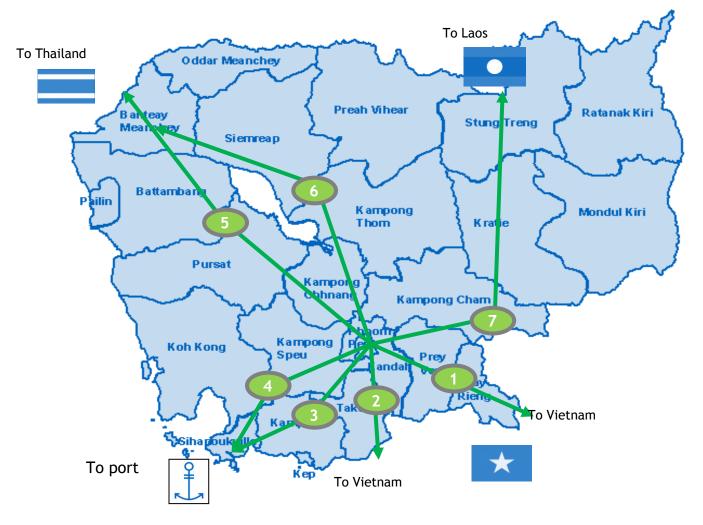

If money transfer is not a key feature of the anchor products, then building capacity in capital cities and other economic centres could be a way to build the customer base quickly while minimizing the resources that are required to deploy a nationwide network prior to launch.

#### 7. Target Major Arteries

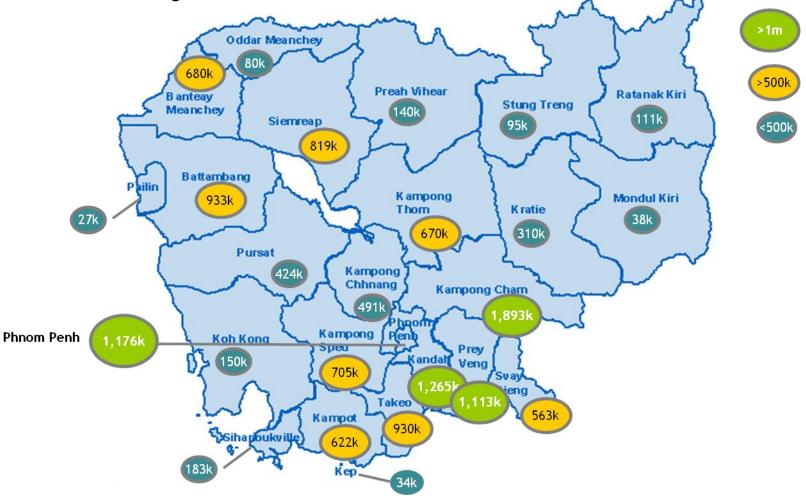

If greater national reach is required, a popular strategy is to build agent infrastructure across the countries major traffic arteries. This is particularly effective if export and import networks are going to be leveraged because they send trucks across these routes on a regular basis.

#### 7. Target Provincial and Population Centers

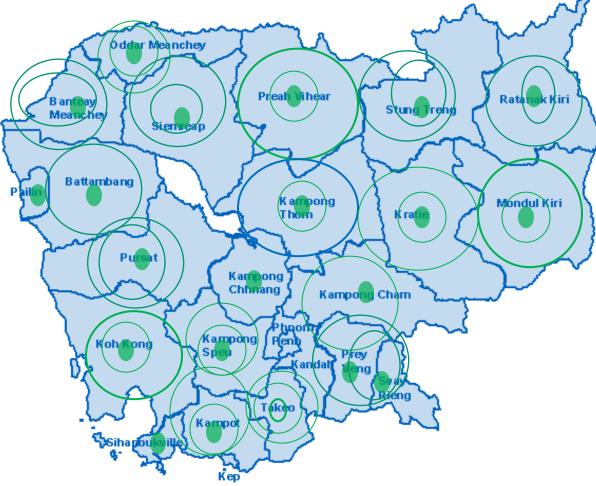

When reach across the country is desired, focusing on major population centers within each province or district is mechanism to begin to reach into more remote areas. Selecting towns or villages to which people travel for marketing and purchasing purposes can increase the amount of traffic that could be driven to the agents.

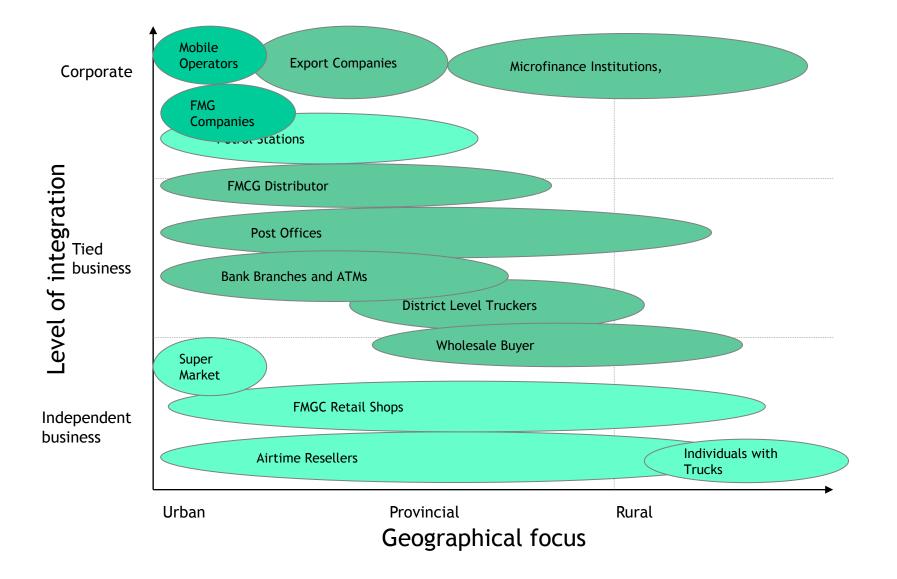

## 7. Build in Concentric Rings

The growth of the agent network needs to be tied to growth of the customer. Therefore, it is not possible to blanket all parts of the country simultaneously. Building out from central points, like the population and provincial centres just mentioned, in rings that push deeper into the countryside can be an effective way to balance numbers reached with resource constraints.

### 8. Chart Master Agent Locations

#### 9. Score Potential Partners Against Key Metrics

### 10. Create Master Agent Profile

FC

Business description	C Suitability
Main business types	<ul> <li>Geographical distribution</li> <li>Number of locations:</li> <li>Urban/rural composition:</li> </ul>
Estimated monthly turnover	<ul><li>Match to MFSP rollout plan:</li><li>Proximity to bank branches:</li></ul>
Estimated cash float	<ul> <li>Brand perception</li> <li>Brand/trust with customers</li> <li>Educated staff</li> <li>Security of premises</li> </ul>
