Zanzibar
SCHOOL FEEDING

Policy Goals

1. **Policy Frameworks**
   School feeding is included in the Poverty Strategic Reduction Plan (PRSP). However, there is no published national policy on school feeding.

2. **Financial Capacity**
   There is no budget line available for school feeding at the national, regional, or local level. There are also no mechanisms in place to improve this situation.

3. **Institutional Capacity and Coordination**
   There is no multisectoral steering committee that coordinates the implementation of school feeding. There is also no national school feeding management unit in place, or coordination between levels.

4. **Design and Implementation**
   There is no monitoring and evaluation plan in place. National standards for food modalities and the food basket are not set. Further, national standards on procurement and logistics arrangements have not been established.

5. **Community Roles-Reaching Beyond Schools**
   There is no school feeding management committee that involves parents, teachers and the local community in the management and implementation of the school feeding program.
Introduction

This report presents an assessment of school feeding policies and institutions that affect young children in Zanzibar. The analysis is based on a World Bank tool developed as part of the Systems Approach for Better Education Results (SABER) initiative that aims to systematically assess education systems against evidence-based global standards and good practice to assist countries reform their education systems for proper learning for all.

School feeding policies are a critical component of an effective education system, given that children’s health and nutrition impact their school attendance, ability to learn, and overall development. A school feeding program is a specific school-based health service, which can be part of a country’s broader school health program, and often a large amount of resources are invested in a school feeding program. SABER-School Feeding collects, analyzes, and disseminates comprehensive information on school feeding policies around the world. The overall objective of the initiative is to help countries design effective policies to improve their education systems, facilitate comparative policy analysis, identify key areas to focus investment, and assist in disseminating good practice.

Zanzibar in Brief

Zanzibar is comprised of two large islands, Unguja and Pemba, and a number of smaller islets, and lies approximately 40km off the coast of mainland Tanzania.

In 1964, Zanzibar merged with Tanganyika to form the United Republic of Tanzania. However, Zanzibar has a large degree of autonomy, including having its own legislative, judicial, and executive branches. Zanzibar has its own ministries such as Education, Health, Agriculture, Finance, Planning, Trade and many others. According to a 2012 population and housing census, Zanzibar has a population of 1,303,568 inhabitants with a population growth rate of 2.8 percent. Zanzibar has experienced positive economic growth with an average growth rate of 6 percent between 2007 and 2010.

Education and Health in Zanzibar

Education

Following the Education Act of 1982, the provision of basic education up to secondary level was made compulsory and free. Currently, the structure of the formal education system according to the 2006 Zanzibar Education policy is 2-6-4-2-3, which is 2 years of pre-primary education, 6 years of primary education, 4 years of secondary education ordinary level, 2 years of secondary education advanced level, and a minimum of 3 years of higher education.

Currently, the education system in Zanzibar is closely aligned with the system on the mainland. For primary education, the curriculum and examinations are managed in Zanzibar; for secondary education, the Zanzibar authorities follow the same curriculum and examinations as on the mainland. The curriculum is designed and developed by the Tanzania Institute of Education and examinations are conducted by the Examinations Council of Tanzania.

Zanzibar’s education sector has seen significant achievements over the last years but daunting challenges remain. In 2012, gross enrolment rates (GER) were 121.5 percent for primary school, 113.5 percent for basic Education (Standard 1-Form 11), and 86.6 percent for secondary (Form 1-Form 11). The major constraints and challenges affecting the education sector in Zanzibar include low participation rates, particularly at secondary levels, inadequate facilities, limited access to textbooks, and the difficult transition between primary and secondary school caused by the abrupt change in language of instruction.

Secondary education, particularly the first four years (to O Level), was identified as the most urgent priority for reform. At the secondary level, the following issues were identified: (i) inadequate access and poor facilities (ii) poor English language proficiency for students (iii) poor English language skills for many secondary teachers (iv) under-qualified and unqualified teachers (v) lack of teaching/learning materials and (vi) ineffective implementation of decentralization.

Financing is considered a responsibility of the Revolutionary Government of Zanzibar (RGZ). Tertiary education is a “union matter” according to the Constitution. Education spending as a share of the government budget and of GDP has been increasing and is currently in the range of 4.0 percent to 4.5 percent of GDP and about 18.5 percent of government spending and is targeted to reach 21 percent over the next few years.
Health

One of the main priorities of the RGZ is its population’s health. Malaria and HIV/AIDS are two health concerns but progress has been made towards reducing the number of deaths caused by these diseases. The HIV/AIDS prevalence rate was 0.6 percent due to government interventions. Moreover, the infant mortality rate and under-five mortality rate have both decreased.\(^1\)

Zanzibar is one of the regions in Tanzania with high rates of chronic food insecurity and food energy deficiency, although, of the various regions in Tanzania, Zanzibar had one of the lowest rates of seasonal food shortages. Children in Zanzibar were also the least likely to be stunted, but the prevalence of stunting and underweight children was higher in Zanzibar than in other regions of Tanzania, at 12 percent and 16 percent respectively.\(^2\) To combat child malnutrition, the World Food Programme’s Home Grown School Feeding, Partnership for Child Development, and Table for Two partnered to launch a school feeding program in 2014 that uses locally produced food. The program provides 5,000 children with a school meal.\(^3\)

The Case for School Feeding

School feeding programs, defined here as the provision of food to schoolchildren, can increase school enrolment\(^4\) and attendance—especially for girls.\(^5\) When combined with quality education, school feeding programs can increase cognition\(^6\) and educational success.\(^7\) With appropriately designed rations, school feeding programs can improve the nutrition status of preschool and primary school-aged children by addressing micronutrient deficiencies. Combined with local agricultural production, these programs can also provide small-scale farmers with a stable market. School feeding programs can provide short-term benefits after crises by helping communities recover and build resilience, and also long-term benefits by developing human capital.\(^8\) School feeding programs can be classified into two main groups: in-school feeding (when children are fed in school) and take-home rations (when families are given food if their children attend school regularly). A major advantage of school feeding programs is that they offer the greatest benefit to the poorest children. Several studies\(^9\) have indicated that missing breakfast impairs educational performance.

Present data suggests that almost every country is seeking to provide food to its schoolchildren. Therefore, especially for low-income countries where most food-insecure regions are concentrated, the key issue is not whether a country will implement school-feeding programs but rather how and with what objectives.

The social shocks of recent global crises has led to an enhanced demand for school feeding programs in low-income countries as they can serve as a safety net for food-insecure households through an income transfer. In response to this amplified request, the United Nations World Food Programme (WFP) and the World Bank jointly undertook an analysis titled *Rethinking School Feeding*.\(^10\) This initiative sought to better understand how to develop and implement effective school feeding programs as a productive safety net that is part of the response to the social shocks, as well as a fiscally sustainable investment in human capital. These efforts are part of a long-term global goal to achieve *Education For All* and provide social protection to the poor.

Five Key Policy Goals to Promote School Feeding

There are five core policy goals that form the basis of an effective school feeding program. Figure 1 illustrates these policy goals and outlines the respective policy levers and outcomes that fall under each goal.

The first goal is a national policy framework. A solid policy foundation strengthens a school feeding program’s sustainability and quality of implementation. National planning for school feeding as part of the country’s poverty reduction strategy (or other equivalent development strategies) conveys the importance the government places on school feeding as part of its development agenda. For most countries that are implementing their own national programs, school feeding is included in national policy frameworks.\(^11\)

\(^1\) Revolutionary Government of Zanzibar, 2010.
\(^2\) World Food Programme. 2013a.
\(^3\) Doege, S.L., 2014.
\(^5\) Jacoby, Cueto, and Pollitt, 1996; Powell et al., 1998; Kristjansson et al., 2007.
\(^6\) Whaley et al., 2003; Kristjansson et al., 2007; Jukes et al., 2008.
\(^7\) Tan, Lane, and Lassibille, 1999; Ahmed, 2004; Adelman et al., 2008.
\(^8\) WFP, 2013b.
\(^10\) Bundy et al., 2009.
\(^11\) Bundy et al., 2009; WFP, 2012.
The second policy goal for school feeding is financial capacity. Stable funding is a prerequisite for sustainability. However, where need is greatest, programs tend to be the smallest and the most reliant on external support. Funding for these programs can come from a combination of sources, such as non-governmental organizations (i.e., WFP) and the government. When a program becomes nationalized, it needs a stable and independent funding source, either through government core resources or development funding. In the long term, a national budget line for school feeding is necessary for an effective and stable program.

The third policy goal is institutional capacity and coordination. School feeding programs are better executed when an institution is mandated and accountable for the implementation of such a program. Effective programs also include multisectoral involvement from sectors such as education, health, agriculture, and local government, as well as a comprehensive link between school feeding and other school health or social protection programs and established coordination mechanisms.

The fourth policy goal is sound design and implementation. In order to maximize effectiveness, school feeding programs should clearly identify country-specific problems, objectives, and expected outcomes. The country’s context and needs should determine the program’s beneficiaries, food basket (menus), food modalities and supply chain. Countries and partners should work towards creating a delicate balance among international, national, and local procurement of foods to support local economies without jeopardizing the quality and stability of the food supply.

The last policy goal is community roles-reaching beyond schools. School feeding programs that are locally owned, incorporate contributions from local communities, and respond to specific community needs are often the strongest. These programs are most likely to make a successful transition from donor assistance to national ownership. Community participation should be considered at every stage, but without overburdening community members.

Use of Evidence-Based Tools

The primary focus of the SABER-School Feeding exercise is gathering systematic and verifiable information about the quality of a country’s policies through a SABER-School Feeding Questionnaire. This data-collecting instrument helps to facilitate comparative policy analysis, identify key areas to focus investment, and disseminate good practice and knowledge sharing. This holistic and integrated assessment of how the overall policy in a country affects young children’s development is categorized into one of the following stages, representing the varying levels of policy development that exist among different dimensions of school feeding:

1. **Latent**: No or very little policy development
2. **Emerging**: Initial/some initiatives towards policy development.
3. **Established**: Some policy development
4. **Advanced**: Development of a comprehensive policy framework

Each policy goal and lever of school feeding is methodically benchmarked through two SABER analysis tools. The first is a *scoring rubric* that quantifies the responses to selected questions from the SABER School Feeding questionnaire by assigning point values to the answers. The second tool is the *SABER School Feeding Framework rubric* that analyzes the responses, especially the written answers, based on the framework’s five policy goals and levers. For more information, please visit the World Bank’s website on SABER-School Health and School Feeding and click on the “What Matters” Framework Paper under Methodology.
Figure 1: Policy goals and policy levers for school feeding

**Policy Goals**

- **Policy Frameworks**: Overarching policies for school feeding in alignment with national-level policy
- **Financial Capacity**: Governance of the national school feeding program through stable funding and budgeting
- **Institutional Capacity and Coordination**: School feeding inter-sectoral coordination and strong partnerships, management and accountability structures, strong institutional frameworks, and monitoring and evaluation
- **Design and Implementation**: Quality assurance of programming, targeting, modalities, and a needs-based and cost-effective procurement design
- **Community Roles—Reaching Beyond Schools**: Strong community participation, accountability, and ownership

**Outcomes**

Healthy children are able to learn better
Findings

Policy Goal 1: Policy Frameworks in Zanzibar

Policy Lever

- Overarching policies for school feeding in alignment with national-level policy

A policy foundation helps strengthen the sustainability and accountability of a school feeding program as well as the quality of its implementation. Nearly all countries with national ownership of programs have well-articulated national policies on the modalities and objectives of school feeding.12

School feeding is included in the published poverty reduction strategy in Zanzibar. In the Zanzibar Strategy for Growth and Reduction of Poverty (2010-2015), school feeding is listed as one of the interventions to increase enrolment and nutrition.13 The government has also set milestones for school feeding programs in the Poverty Reduction Strategic Plan (PRSP), conveying that the Zanzibar government not only recognizes the importance of school feeding programs but also recognizes the importance of setting goals and improving the effectiveness of these programs. However, there is no published national policy on school feeding.

---

12 WFP, 2012.

Policy Goal 2: Financial Capacity in Zanzibar

Policy Lever

- Governance of the national school feeding program through stable funding and budgeting

*Stable funding is necessary for the long-term sustainability of a school feeding program, especially one that transitions from being donor-funded to government-funded. School feeding programs supported by external partners generally rely on food aid, government in-kind donations, and/or government cash contributions. In order for the program to be sustainable and nationally owned, the school feeding program should have a budget line and be part of the government’s budgeting and planning process.*

School feeding is included in the national planning process in Zanzibar, yet school feeding is not funded through a national budget. Regions do not have the capacity to plan and budget their needs and request resources from the central level to implement school feeding programs. Further, no region, school or ministry involved in the program has a budget line for school feeding. Although school feeding is recognized at a national level, a budget must be initiated at all levels in Zanzibar. Furthermore, the school feeding funds are not being disbursed to the implementers in a timely and effective manner. There are problems with coordination and funds.

### 2. Financial capacity is LATENT

<td><img src="https://example.com/latent.png" alt="Latent" /></td>
<td>No budget line available for school feeding at national, regional, or local level; no mechanisms recognized to improve</td>
</tr>
</tbody>
</table>
Policy Goal 3: Institutional Capacity and Coordination in Zanzibar

Policy Levers
- School feeding inter-sectoral coordination and strong partnerships
- Management and accountability structures, strong institutional frameworks, and monitoring and evaluation

Implementing a school feeding policy requires significant institutional capacity because the program is a complex school health intervention. The policy should clearly define the roles and responsibilities of stakeholders and actors at all levels. Methodically increasing government capacity to manage a school feeding program is important to the program’s long-term sustainability. A national institution that is mandated and accountable for the implementation of the school feeding program is considered to be a best practice. This institution should have a specific unit that has adequate resources and knowledgeable staff to manage the school feeding program. Moreover, policies that detail accountability and management mechanisms can help ensure program quality and efficiency, especially if the school feeding program is decentralized.

Zanzibar has given the Ministry of Education the mandate of managing and implementing the school feeding program. This concentrated leadership is a necessary trait of effective implementation. Zanzibar does not have a multi-sectoral steering committee coordinating the implementation of school feeding.

School feeding was not discussed in any national-level coordination body that deals with education, health, agriculture, and nutrition. Also, within the Ministry of Education there is no specific unit in charge of the overall management of school feeding and responsible for coordination between the national, regional, and school levels.

There are no coordination mechanisms in place between cross-government stakeholders. At more local levels, there are no pre- or in-service training programs in place to train staff on school feeding program management and implementation. Regional and district offices also do not have sufficient staff, knowledge and resources to fulfill their responsibilities.

Inter-level coordination is a key component of effective implementation for school feeding programs, and Zanzibar should continue to work towards establishing a foundation for coordination of school feeding at various levels.

</tr>
</tbody>
</table>
Policy Goal 4: Design and Implementation in Zanzibar

Policy Lever

- Quality assurance of programming and targeting, modalities, and procurement design, ensuring design that is both needs-based and cost-effective

A well-designed school feeding policy that is based on evidence is critical to the implementation of a quality school feeding program. The policy can include details on targeting the correct beneficiaries, selecting the proper modalities of food delivery, and choosing a quality food basket. Over time, the school feeding policy may be redesigned or modified according to reassessments of the school feeding program.

A government-led strategy for the monitoring and evaluation (M&E) of a national school feeding program is the cornerstone for the development of a sustainable and efficient M&E system.\(^\text{14}\) Zanzibar does not have a monitoring and evaluation plan for the school feeding program. Since no impact evaluations have been planned or carried out, there are no progress reports and no specific program implementation documents available. Further, the program does not have objectives that correspond to the context of the country and the poverty reduction strategy. These objectives, or targeting criteria, are important for two reasons: first, to keep the program within the budget constraints and maximize the effect of spending in line with the objectives, and second, to ensure equity by redistributing resources to poor, vulnerable children. But no situation analysis has been undertaken and no future goals have been set.

There are no national standards on food modalities and the food basket. Food modalities have not been chosen based on the objectives of the program, the duration of the school day, and the feasibility of implementation. There are also no national standards on food management, procurement and logistics. There have also been no discussions on possible procurement modalities for school feeding that can be more locally appropriate, including the possibility of linking procurement with agriculture-related activities. Furthermore, there have been no discussions on possible service provision models for school feeding that could potentially create jobs and profit-making opportunities for community members.

The Ministry of Agriculture has not been involved in making the connection between school feeding and national agricultural production, and the private sector has not been involved in making the connection between farmers and the school feeding market. At the school level, the requirements for the school feeding program are not communicated to the agriculture sector to support the links between food production and the school feeding market.

National standards on food modalities and the food basket have been set, which correspond to nutritional content requirements, local habits and tastes, and the availability of local food. The food modalities have also been chosen based on the objectives of the program, the duration of the school day, and the feasibility of implementation.

There are no complementary programs with budgets to provide capacity building for small holders and to help the community with storage, food processing, or preparation. The actual cost per child per year for school feeding is unknown, along with the total number of districts and the number of schoolchildren covered by the program.

<td>National standards on procurement and logistics arrangements have not been established</td>
</tr>
</tbody>
</table>
Policy Goal 5: Community roles-reaching beyond schools

Policy Lever
- Community participation and accountability

The role of the community should be clearly defined in a school feeding policy because community participation and ownership improves the school feeding program’s chances of long-term sustainability. If the government places the responsibility of sustaining the school feeding program on the community, the school feeding policy should detail the guidelines, minimum standards, and support for the community to implement the program. The school feeding policy can also include mechanisms for the community to hold the government accountable.

At the school level, there may be a school management committee composed of parents, teachers, and students that acts as a liaison between the school and the community and manages the school feeding program. Care should be taken not to overburden the community, because in some cases the community may introduce fees to support the local school feeding program, which can negatively impact enrolment rates. Community-assisted school feeding programs are usually most successful in food-secure areas.

The RGZ has not set up a school feeding management committee that could involve parents, teachers and local community in the management and implementation of the school feeding program. Community involvement is lacking and there is little community independence in the school feeding program. The government should help communities participate in the school feeding program.

| 5. Community roles-reaching beyond schools is LATENT |  |
|---|---|---|
| Indicators | Score | Justification |
| 5A. Community participates in school feeding program design, implementation, management and evaluation and contributes resources | Latent | Systems and accountability mechanisms are not yet in place for consultation with parents and community members on the design, monitoring and feedback of the school feeding program |

To view the scores for all indicators and policy goals in one table, please refer to Appendix 1.
Conclusion
The following policy options represent possible areas where school feeding could be strengthened in Zanzibar, based on the conclusions of this report.

Policy Options
- Establish a national school feeding policy for Zanzibar.
- Create budgets for school feeding with national, regional and school level budgets. Create mechanisms for regional and school leaders to plan, budget and request funding.
- Establish a school feeding unit within the Ministry of Education to implement school feeding nationally. In addition, establish a national steering committee for school feeding that coordinates multisectoral activities for school feeding at the national, regional and school levels.
- Create a monitoring and evaluation plan for the school feeding program. Carry out a comprehensive situation analysis, as well as impact evaluations of ongoing programs.
- Support the participation of the community in the planning and implementation of school feeding through the establishment of school feeding management committees at each school that involves parents, teachers and the local community in the management and implementation of the school feeding program.

### Policy Goal 5: Community roles—reaching beyond schools

| Community participation and accountability – among community participation and ownership (teachers, parents, students) | Community participates in school feeding program design, implementation, management, and evaluation and monitoring and evaluation (M&E) | Systems and accountability mechanisms are not yet in place for community participation and ownership on governance and management of school feeding program | A school feeding management committee exists with powers and accountability mechanisms on governance and management of school feeding programs | The school feeding management committee includes representatives of teachers, parents, and community members, and communities have accountability mechanisms to hold school feeding programs accountable at the school level. |
Acknowledgements

This SABER-School Feeding Report was prepared from a SABER-School Feeding questionnaire completed by staff of the Ministry of Education.

We thank all the Zanzibar participants at the 4th annual meeting of the Eastern and Southern African Network of Education Sector School Health, Nutrition and HIV focal points that took place in Kampala, Uganda, December 6-8, 2011; particularly, Hassan J. Muhsin, HIV/AIDS Focal Point and Safia A. Rijaal, Administrative Officer and School Health and Nutrition Focal Point with the Ministry of Education.

We also thank Fahma Nur and Amina Denboba for data collection during the meeting, Paula Trepman and Angela Ha (Massachusetts Institute of Technology) for their significant contributions to the data analysis and reporting. We thank the many people that have served as reviewers including Shwetlena Sabarwal, Andy Tembon, Donald Bundy, Michelle Louie, and Janet Holt (World Bank); Carmen Burbano (World Food Programme) and Lesley Drake and Kristie Watkins (Partnership for Child Development).

Finally, we thank the Minister of Education of Zanzibar for allowing the Ministry staff members to attend the Kampala focal points’ meeting, and the many others who contributed to the production of this report.

The Systems Approach for Better Education Results (SABER) initiative collects data on the policies and institutions of education systems around the world and benchmarks them against practices associated with student learning. SABER aims to give all parties with a stake in educational results—from students, administrators, teachers, and parents to policymakers and business people—an accessible, detailed, objective snapshot of how well the policies of their country's education system are oriented toward ensuring that all children and youth learn.

This report focuses specifically on policies in the area of school feeding.
