Public Disclosure Authorized

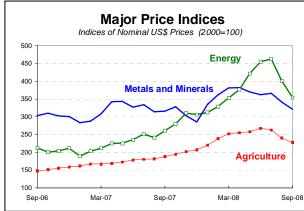

Non-energy commodity prices fell 5.2 percent in September, continuing the plunge of the past two months due to weakening global demand and appreciation of the dollar—up 4.0 percent against the euro in September. Price declines accelerated sharply in early October as concerns of global demand intensified. Only potassium chloride fertilizer prices rose significantly last month, up 10.2 percent, on a strike in Canada.

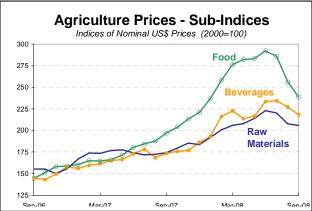

Crude oil prices fell 13.0 percent in September, averaging \$99.7/bbl, and fell below \$83/bbl in early October. The slump was due to sharply declining demand in the U.S. and Europe, and expectations of slowing demand in developing countries as the global economy slows. Non-OPEC supplies are also set to jump in the fourth quarter and in 2009 which should result in higher stocks. Inventories remain relatively low due to a number of disruptions from the Caspian, Nigeria and U.S. Gulf of Mexico. OPEC meets December 17<sup>th</sup> but it is still not known at what level the Organization may step in to support prices.

Natural gas prices in the U.S. fell 6.7 percent in September, despite significant disruptions in the wake of hurricanes Gustav and Ike, due to weak demand, rising inventories, and strong growth in shale-gas production. Coal prices fell 5.3 percent due to weakening demand and significant easing of port congestion and vessel queues in Australia.

Agriculture prices dropped 5.1 percent in September—the third consecutive monthly decline—on weakening demand, lower crude oil prices, and improved supply prospects. The largest declines were in fats and oils which plunged 9.4 percent, led by a 14 percent drop in palm oil prices due to slowing import demand and a reduction in Indonesia's export tax which had fueled the recent spike. Wheat prices fell 10 percent due to a projected 10 percent increase in global production. The soybean complex fell 7-9 percent on expectations of slowing demand in China and lower demand for biodiesel. Sugar prices fell 7 percent on expected low ethanol demand and sharp rise in global supplies.

Metals and minerals prices fell 5.8 percent in September, and continued their sharp declines in early October on concerns about global demand. Silver prices dropped 16 percent, versus only 1 percent for gold, as silver demand is more sensitive to slowing economic growth. Most base metal prices have plunged one-third or more since early July, as metals prices are most linked to industrial output. Some prices have been falling since last year, with nickel prices down three-quarters from its peak, and have fallen into the cost curve forcing output cuts. Currencies of commodity producers, e.g., Australia and Brazil, have also plunged recently, which partly offsets the price effect and helps sustain profitability and output.

Prepared in the Development Economics Prospects Group (DECPG) by Shane Streifel, Donald Mitchell, John Baffes and Betty Dow. Katherine Rollins is task assistant. This report is available on <a href="http://decpg.worldbank.org">http://decpg.worldbank.org</a>.

### **Major Movers September**<sup>1</sup>

**Potassium chloride** prices surged 10.2 percent—unlike other fertilizer prices—due to a labor strike in Canada, the world's largest exporter.

**Coffee robusta** prices decreased 6.4 percent on early indications of record crops in Vietnam and Brazil during the 2008-09 season.

**Natural gas (U.S.)** prices fell 6.7 percent on weakening demand, rising inventories, and higher domestic production of shale gas.

Coconut oil and palmkernel oil (close substitutes) prices dropped 7.5 percent and 7.3 percent, respectively, due to larger than expected palmkernel oil production with stocks reaching historical highs.

**Sugar** prices fell 7.4 percent as lower crude oil prices are expected to reduce demand for ethanol. Global supplies of sugar are expected to rise sharply led by a 15 percent increase in Brazilian sugar cane production.

**Tin** prices decreased 8.3 percent on weakening demand although stocks have remained relatively low on continued supply constraints.

**Urea and DAP** prices fell 8.3 percent and 6.6 percent, respectively, as demand weakened in response to lower grain prices, and export competition intensified as companies lower price expectations.

**Copper** prices fell 8.4 percent on weak global demand and higher inventories, with prices plunging sharply in early October on increasing concerns about global growth.

Soybeans, meal and oil prices fell 8.6 percent, 6.9 percent and 7.2 percent, respectively, as demand from China—the largest importer—is expected to weaken while global production is projected to rise from increased plantings. Demand for soybean oil for biodiesel is also expected to decline as crude oil prices fall.

**Aluminum** prices dropped 8.6 percent on weakening demand, sharply rising stocks, and continued growth in Chinese aluminum production and exports.

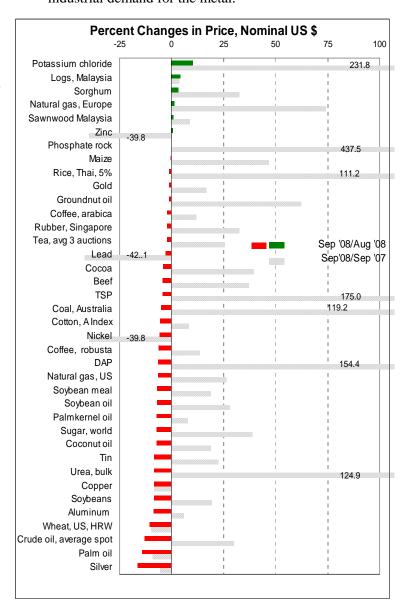

Wheat prices declined 10.6 percent as global production is projected to increase by 10 percent and ending-stocks are expected to rise by 18

percent.

**Crude** oil prices fell 13.0 percent on accelerating demand reductions in the OECD and imminent jump in non-OPEC supplies that will extend over the next year.

Palm oil prices dropped 14.1 percent (down more than one-third since June) due to weakening demand and a reduction in the palm oil export tax by Indonesia (which partly fueled the recent price hike).

**Silver** prices plunged 16.4 percent on the strengthening dollar and expectations of reduced industrial demand for the metal.

<sup>&</sup>lt;sup>1</sup> Percent change of average September 2008 prices compared to average August prices in nominal U.S. dollars (graph also includes 12-month changes in grey).
