Project Development Objectives

Project Development Objective (from Project Appraisal Document)

The objective of the Project is to develop and test cost-effective interventions that can provide food security to communities in need of such programs by empowering the women in these communities.

Has the Project Development Objective been changed since Board Approval of the Project?

Yes No

Component(s)

| Component Name | Component Cost |
|--|----------------|
| Credit test component. Women were offered loans of rice and maize in the lean season (at the commencement of shortages). | 0.00 |
| Storage component. Women were given storage materials that were airtight and resilient to rodents. | 0.00 |
| Evaluation component. | 0.00 |

Implementation Status Overview

The project has reached 7500 beneficiaries in 72 villages in West Timor. The program was implemented by two local NGOs, Yayasan Alfa Omega and Yayasan Tanaoba Lais Manekat. Six rounds of extensive surveys were carried out by the local survey institute, Lembaga Penelitian Undana. Evaluation of the program was done using randomized control

trials. The programs were largely successful and the team believes that there is much to be gained from extending and expanding them. The project is due to close in February, 2012.

Key Decisions Regarding Implementation

In terms of the policy recommendations arising out of this project, storage, in particular, is an ideal candidate for expansion. The first advantage is cost-effectiveness. Consider a plastic drum that costs Rp. 250,000 and stores 180 kg of maize. If this maize were stored using traditional methods, at least 25%, or 45 kg, would be lost by the lean season. At typical lean season maize prices of Rp. 6000/kg, this loss is worth Rp. 270,000. This loss is averted when drums are used. Therefore, the cost of a drum is recouped within one agricultural cycle.¹ The second advantage of storage is that it does not involve long-term overhead expenses. After initial training (which is crucial to ensure that precautions against aflatoxins are taken), the technology can be recycled without repeated administrative costs.
