FOREWORD

The promise of the Global Data Facility (GDF) is to help enable better lives on a livable planet, made possible by data-powered development. As global crises compound, this promise has never been more important.

With the generous support and trust of our inaugural partners, we created the GDF to serve as an innovative global funding instrument that tackles the world's most critical data impact opportunities. We envisaged a pioneering mechanism that would facilitate durable transformations in data systems and data capital in low- and middle-income countries.

As this report attests, I am proud to say that we kept our commitment to this vision. Through its support for enhancing debt transparency and the quality of comprehensive external debt information, collecting price data for constructing purchasing power parity through the International Comparison Program (ICP), updating the System of National Accounts (SNA) to capture the new reality in economic accounting, as well as building infrastructure and methods for extracting, disaggregating, and standardizing geo-spatial data and household surveys, the GDF has begun to fulfill its promise of enabling data-driven actions that improve lives and safeguard the planet.

The GDF's impact is being felt on issues that affect the most vulnerable among us. Through the GDF, we have been able to enhance debt transparency, including in countries such as Mozambique and

Sierra Leone, by supporting borrowers' efforts to strengthen debt reporting and recording – critical at a time when nearly two-thirds of low-income nations are at an elevated risk of debt distress or already in it. We have facilitated the 2021 International Comparison Program (ICP) cycle in over 170 economies amidst the challenges of the COVID-19 pandemic, providing tailored guidance and flexible survey schedules to national statistical offices and regional agencies. With our partners, we have engaged 181 countries in the SNA update process to ensure their diverse perspectives and experiences are reflected in economic accounting and policymaking. We are also working on using geospatial data for the real-time monitoring of food insecurity, a problem estimated to affect a quarter of a billion people.

In a rapidly changing data-driven world, where targeted and responsible applications of artificial intelligence hold tremendous potential for achieving sustainable development, better data and the crucial insights gained from it are becoming ever more essential in addressing the many challenges we face. Through its investments in the fundamentals, as well as at the frontier of data and statistics, the GDF will continue to ensure that countries can leverage data with state-of-the-art solutions for better lives and a safer planet.

I extend a warm invitation for you to join us in fully realizing this promise.

HAISHAN FU

JOINING FORCES FOR DATA

ACKNOWLEDGEMENTS

The Global Data Facility recognizes that working collaboratively and harnessing the power of partnerships is essential for achieving meaningful progress in transforming data systems and capital in low- and middle-income countries. By joining forces, we can address the challenges and opportunities associated with data in these regions more effectively.

The success of this new financing architecture for data is made possible

by the commitment and generosity of our partners* who share a dedication to advancing the global data agenda. These partners are essential contributors, providing the resources, expertise, and support necessary to drive positive change in data systems and capital across the world. Together, we are striving for better lives and a safer planet, recognizing that sustainable transformation of data is a cornerstone of progress in today's interconnected world.

*AS OF DECEMBER 20, 2023

ABOUT THE GLOBAL DATA FACILITY

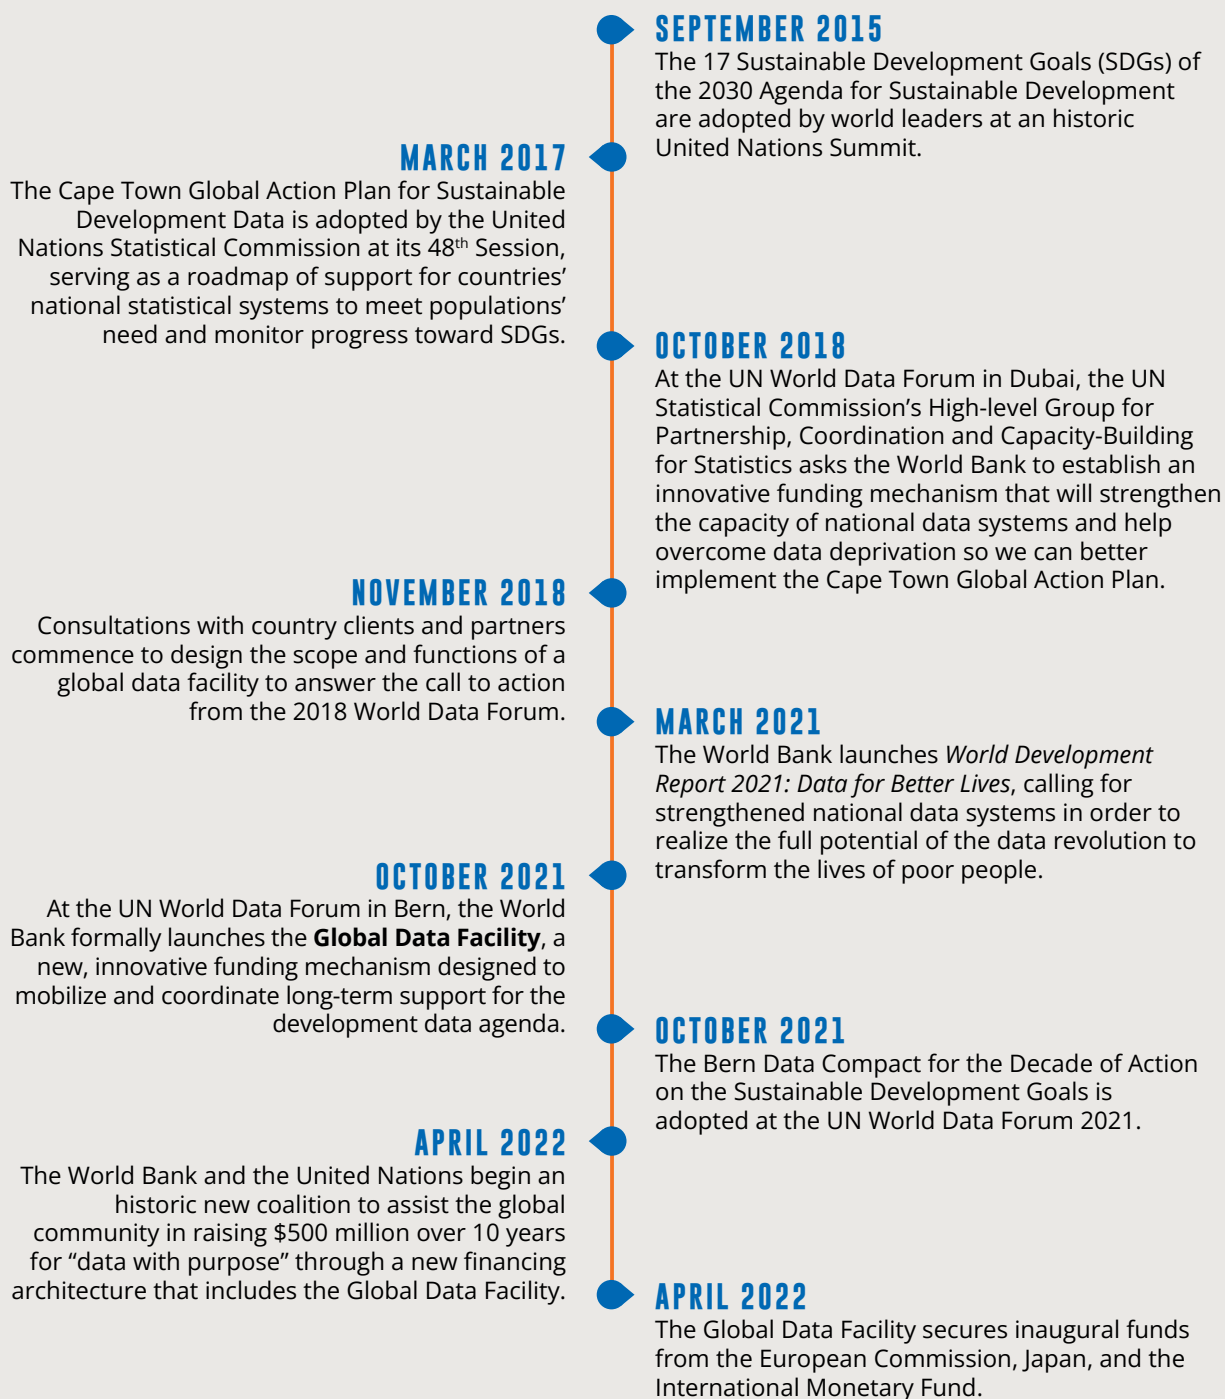

The Global Data Facility (GDF) is a pioneering global funding mechanism that plays a pivotal role in facilitating sustainable and transformative improvements in data systems and data capital in low- and middle-income countries. This initiative is driven by a collaborative partnership between the World Bank, the United Nations, and various development partners, with the ambitious goal of mobilizing a minimum of \$500 million in funding by 2030. The primary objective is to coordinate and support critical data initiatives worldwide, fostering lasting impact.

The Global Data Facility is designed to ensure that demand drives funding for data and statistics priorities at the global, regional, national, and community levels. Through investments in the fundamentals, as well as at the frontier of data and statistics, the Global Data Facility ensures flexible and adaptive country-led approaches. It allows for customized entry points in countries and distinct levels of engagement with country partners and practitioners supporting data and statistics priorities.

Additionally, the Global Data Facility serves as a global coordination mechanism for a spectrum of partners, practitioners, and country clients to improve and scale up support for the global development data agenda. Operating in tandem with other initiatives, such as the Bern Network's Clearinghouse for Financing Development Data and the United Nation's Complex Risk Analytics Fund (CRAF'd), the Global Data Facility optimizes alignment of funding and priorities around the world.

The Global Data Facility is the World Bank's primary mechanism to implement recommendations and insights from the *World Development Report 2021: Data for Better Lives* to put data to work to improve peoples' lives and livelihoods across regions. Its financing framework is likewise designed to help enable the implementation of the Cape Town Global Action Plan for Sustainable Development Data, as well as support the achievement of the 2030 Agenda, including efforts to close data gaps around the Sustainable Development Goals.

THE DEVELOPMENT OF THE GLOBAL DATA FACILITY

AREAS OF WORK

CAPACITY BUILDING

Build the capacity of government and non-government actors through technical assistance so they can more effectively use data across their full “life cycle”—including data production, dissemination, access, analysis, and use/reuse—to improve lives and safeguard the planet.

FRONTIER DATA SOURCES AND TOOLS FOR DEVELOPMENT

Leverage frontier data sources and tools for development so governments around the world can use alternative and cutting-edge data collection modes and sources, as well as develop, adopt, and scale new analytical tools to use more and better administrative data for data-driven decision-making.

DATA AS A GLOBAL PUBLIC GOOD

Ensure that data are safeguarded as a global public good and as a resource to achieve equitable and sustainable development by fostering a new global consensus on data through its support for standard-setting and partnership-cultivating activities.

DATA RESEARCH, KNOWLEDGE CURATION, AND DISSEMINATION

Facilitate demand-driven data research, knowledge curation, and dissemination to promote customized approaches to data, as well as responsible open data and open access practices.

MODERNIZATION AND TRANSFORMATION OF GOVERNMENTS' DATA SYSTEMS

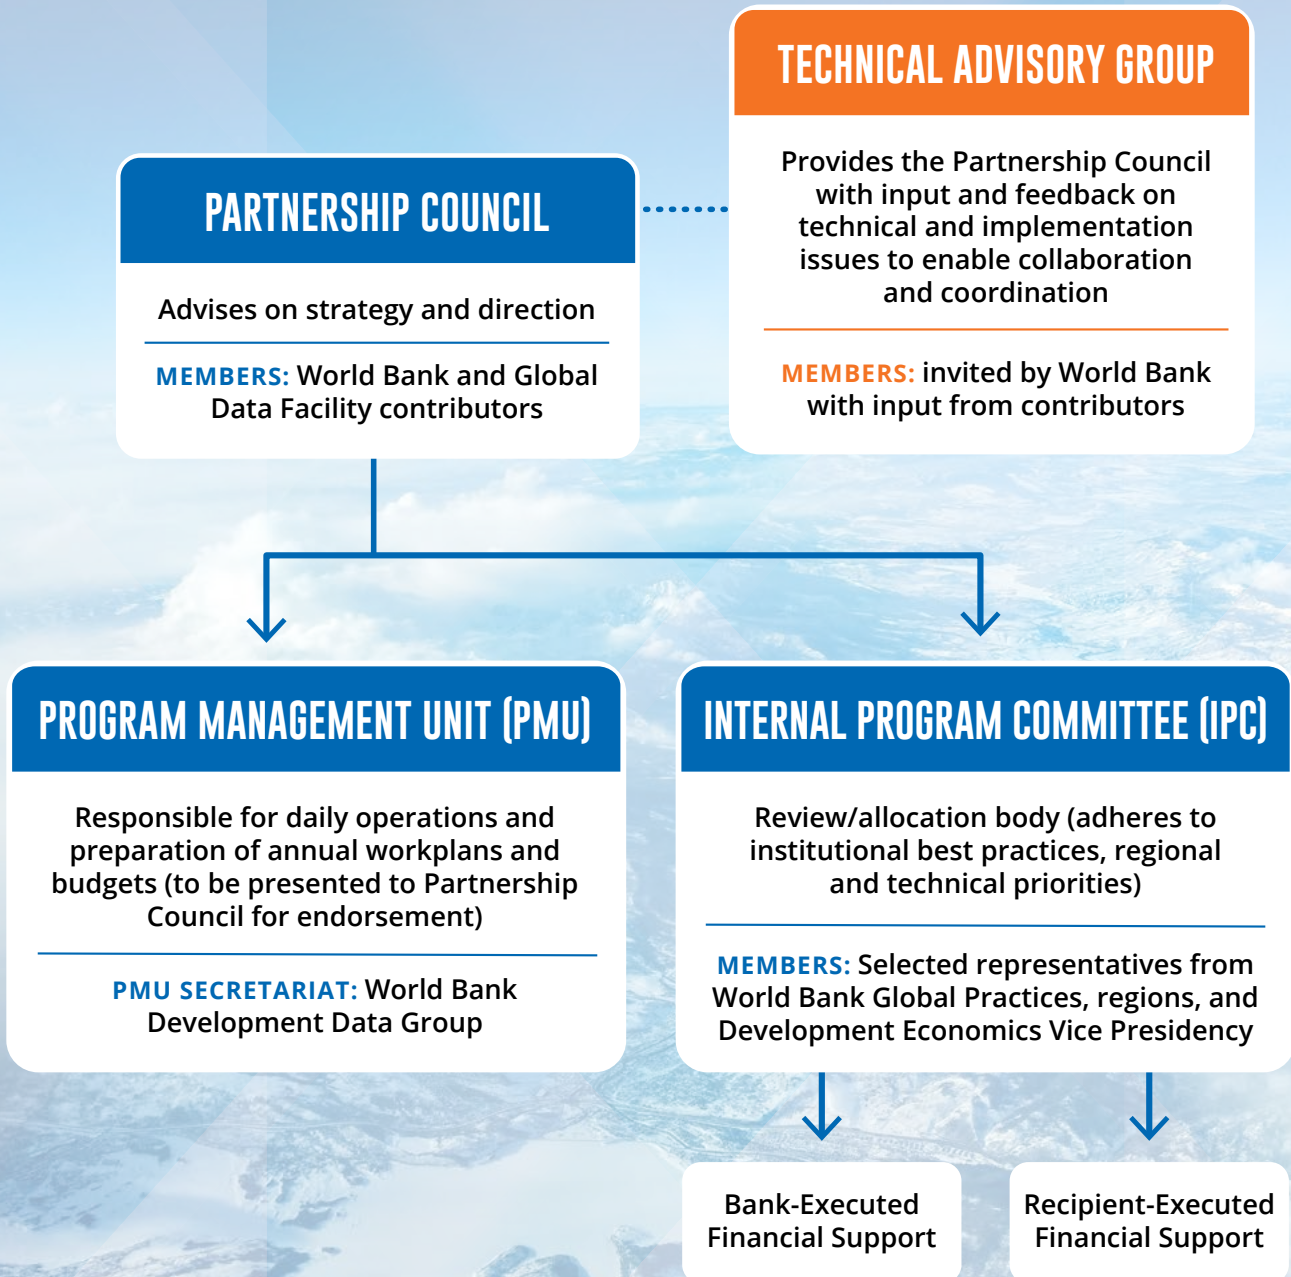

Help governments modernize and transform their data systems through operational approaches, including increasing coordination and alignment among different actors and across relevant sectors, so nations can effectively respond to the challenges of our times.

INCLUSIVE DATA AND CLOSING DATA GAPS

Prioritize inclusive data and closing data gaps so governments can strengthen data on all groups within populations and counting the hitherto uncoun- ted, as well as promote the systematic mainstreaming of gender equality in the data life cycle.

SPRING MEETINGS 2022

PUTTING DATA TO WORK FOR PEOPLE AND PLANET
A joint call to action

2 EVENTS

On April 27, 2022, during the 2022 World Bank Spring Meetings, then World Bank Group Senior Vice President and Chief Economist, Carmen Reinhart, then World Bank Managing Director for Development Policy and Partnerships, Mari Pangestu, and United Nations Deputy Secretary-General, Amina Mohammed, convened a High-Level Roundtable to create a new coalition on investing in "**Data with Purpose.**" Following the momentum of this event, on September 22, 2022, during the 77th Session of the United Nations General Assembly, United Nations Deputy Secretary-General, Amina Mohammed, and then World Bank Managing Director for Development Policy and Partnerships, Mari Pangestu, convened a multi-stakeholder High-Level Event titled "**Unlocking Impact: Data with Purpose.**"

1 INTERVIEW

Craig Hammer (Senior Program Manager at the World Bank's Development Data Group and manager of the Global Data Facility) sat down for an interview during the 2023 UN World Data Forum in Hangzhou, China to discuss challenges and opportunities around data financing, as well as the Global Data Facility's role in providing funding for the world's most critical data impact opportunities.

4 PROMOTIONAL ACTIVITIES

2 BLOG POSTS

Two Blog posts were published:

1. "Decades of learning and experience from the Trust Fund for Statistical Capacity Building to inform the new Global Data Facility" on how the GDF builds and expands on the impactful legacy of its predecessor.
2. "Putting Mobile Phone Big Data to Work for Policy and Official Statistics" on how the GDF aims to boost programmatic funding and support to integrate the use of MPD for official statistics and policy planning into 30 national data systems by 2030.

1 RESEARCH ARTICLE

A research article was published in September 2022: "Toward a new, collaborative global financing architecture for fragile, low, and middle-income countries' data priorities" on how two new complementary funds were launched by the World Bank and United Nations to support countries' data systems, data capital, and risk analytics in a coordinated way: the World Bank-hosted Global Data Facility and the UN-hosted Complex Risk Analytics Fund (CRAF'd).

1 VIDEO

"Putting Mobile Phone Data to Work for Development" on repurposing mobile phone data into development policy and how the GDF supports the use of mobile phone data for policymaking in 30 countries by 2030.

PROJECT HIGHLIGHTS

The Global Data Facility has prioritized pathways to impact by helping states unlock the full value of data for development. Inaugural commitments by first-mover development partners to the Global Data Facility are organized under two pillars, for which individual window arrangements are supporting allocation, management, and oversight, capturing results, reporting,

and communications and visibility initiatives. These window arrangements are: (1) Economic Statistics Window; and (2) Data Analytics Window. A new window is currently being activated to support the Mobile Data application and implementation.

A new window is currently being activated to support the Mobile Big Data application and implementation.

ECONOMIC STATISTICS WINDOW

Three programs are supported by the window:

- the strengthening of debt reporting and recording to meet the data needs of policymakers, academics, and the international community;
- the implementation of International Comparison Program activities and production of purchasing power parities and relevant indices; and
- the World Bank's participation in technical research and contribution to the development of the new System of National Account's manual (SNA2025).

DATA ANALYTICS WINDOW

The aim of this window is to support the efforts of filling knowledge gaps for global public goods in data and analytics on subnational development issues, particularly on:

- the geography of growth and development;
- data infrastructure, capacity, and equality for better policy making at the subnational level; and
- strengthening of evidence-based policymaking at the subnational level.

DEBT REPORTING & RECORDING

PROJECT DESCRIPTION

Comprehensive, accurate, and transparent public debt data are fundamental to the management of public liabilities, and the foundation of informed and sustainable borrowing decisions. Knowing what is already owed is essential for policymakers to make informed borrowing choices, creditors to appropriately price for sovereign risk, and citizens to hold their governments accountable. Critically, the availability of high-quality data is a pre-requisite for the ability of national governments and the international community to make informed debt sustainability analyses, to minimize the risk of debt crisis, and to take timely remedial action when they occur.

The World Bank has long played a leading role in promoting and delivering on greater debt data transparency. It collects and compiles the single verifiable source of long-series, cross-country comparable data on the external debt of low- and middle-income countries through the World Bank Debtor Reporting System (DRS). The DRS requires regular (annual and quarterly) and detailed (loan-by-loan) information on external

public and publicly external debt from all World Bank borrowers. The DRS helps ensure debt data conform to international definitions and standards.

The project aims to support borrowers' efforts to strengthen debt reporting and recording, at the national and the international level, to meet the data needs of policymakers, academics, and the international community. The overarching objective of the project is to enhance debt transparency which is the foundation of better management of public liabilities and the effective and sustainable use of borrowed resources. There are five key elements to this project:

1. Redesigning the Debt Reporting System (DRS) to meet the goal of debt transparency and support current data needs;
2. extending the DRS to cover domestic public debt;
3. measures to close data gaps and reconcile discrepancies;
4. enhancing data dissemination, including more granular data and ease of access to data to facilitate research and analysis; and
5. capacity building and training.

HIGHLIGHTS

120+

PARTICIPATING COUNTRIES

ESTABLISHMENT OF THE TECHNICAL WORKING GROUP FOR IMPROVING AND ENHANCING DEBT STATISTICS.

UPDATES TO THE DRS MANUAL to be in line with international standards and continued work on the new debt system.

INCLUSION OF MORE GRANULARITY IN THE INTERNATIONAL DEBT STATISTICS (IDS) DATASET by debtor and creditor breakdowns of external debt stocks and flows and on the lending terms of new loans.

3

ARTICLES OR EDUCATIONAL BLOGS TO BETTER UNDERSTAND THE USE OF THE DEBT DATA/STATISTICS.

3

REPORTS PREPARED

- Concluded first pilot data collection exercise for Public Sector Domestic Debt and prepared a report on the results of pilot exercise for publication.
- Prepared and published a report on the preliminary findings of the debt data sharing exercise between the G7, Paris Club Countries, and the World Bank DRS.
- Prepared a report (soon to be published) on findings of a detailed comparison of China's lending (loan commitment) to Low- and Middle-Income Countries between the data compiled by AidData Research Lab and World Bank Debtor Reporting System.

8

CAPACITY BUILDING & TRAINING

- Administered Debt Reporting System technical assistance in **2** countries: Mozambique and Sierra Leone.
- Participated in **2** Regional Statistical Capacity Building Workshops on Debt Statistics for the Africa Region.
- Participated in **4** Regional Training Courses/ Workshops on Debt Statistics.

AFDB/COMESA - STRENGTHENING STATISTICAL CAPACITIES FOR ACCOUNTABILITY, TRANSPARENCY, AND REPORTING ON PUBLIC DEBT STATISTICS – KIGALI, RWANDA

Debt stock in low- and middle-income countries has been on the upward trajectory and surged in the wake of the COVID-19 pandemic. Debt accumulation for these countries has also outpaced economic growth, thereby raising serious concerns about their ability to service their debt. Disclosure of public debt data is even more critical to sustainable borrowing and lending practices today. And, although the DRS have improved immeasurably over the years, plans have already been made to make further enhancements.

DRS priorities to be implemented over the next two to three years center on reformulating the DRS to fully reflect current borrowing patterns in low- and middle-income countries and the plethora of new lending instruments, in addition to expanding the reporting requirement to support current data needs.

The Technical Working Group for Improving and Enhancing Public and External Debt

Statistics was established and is composed of World Bank (Data Group), International Monetary Fund Statistics Department, Commonwealth Secretariat (COMSEC) Debt Management Unit, and The Debt Management and Financial Analysis System (DMFAS) of the United Nations Conference on Trade and Development. The Working Group's main objectives will be to review and guide the ongoing work being done by the World Bank in updating the DRS Manual to be in line with international standards; the expanded DRS reporting requirements, as well as evaluate extending the coverage to include the domestic component of public debt. Currently, changes to the DRS manual have been identified and changes to the DRS reporting templates are being updated to reflect the current borrowing patterns and the new lending instruments. These changes also require the development of a new debt system which is currently being developed.

Efforts to close data gaps to enhance data quality and coverage were also undertaken,

including the debt data sharing exercise between the G7, Paris Club countries, and the World Bank DRS. Additionally, a detailed comparison of China's lending (loan commitments) to low- and middle-income countries was conducted between the data compiled by AidData Research Lab and the World Bank Debtor Reporting System. The report is currently being finalized. As part of the ongoing debt transparency initiative, the IDS database was expanded to include further granularity of debtor and creditor breakdowns of external debt stocks and flows, as well as lending terms on new commitments data by debtor types.

World Bank DRS also engaged in knowledge and expertise sharing. As part of these efforts, we published 3 articles and educational blogs to ensure academics,

researchers, and other users of the IDS data better understand the use of debt data and statistics. We also increased efforts to assist DRS reporting countries Increased efforts in compiling and disclosing comprehensive, accurate, and timely public debt data, including providing technical assistance to Mozambique and Sierra Leone to address their DRS reporting gaps. Presentations on the Bank's Agenda on Enhancing Debt Data Quality and Transparency, and debt statistics were conducted at 2 Statistical Capacity Building Workshops on Debt Statistics for the Africa Region. Presentations on Debt Statistics at the World Bank were also conducted at 4 Regional IMF Training Courses/Workshops for several regions which included Latin America and the Caribbean, Africa, Europe and Central Asia.

HIGHLIGHT FROM A DEBT REPORTING AND RECORDING PROJECT

SUPPORTING DEBT TRANSPARENCY THROUGH THE DEBTOR REPORTING SYSTEM (DRS) AND SUSTAINABLE DEVELOPMENT FINANCE POLICY (SDFP): A MISSION TO MOZAMBIQUE

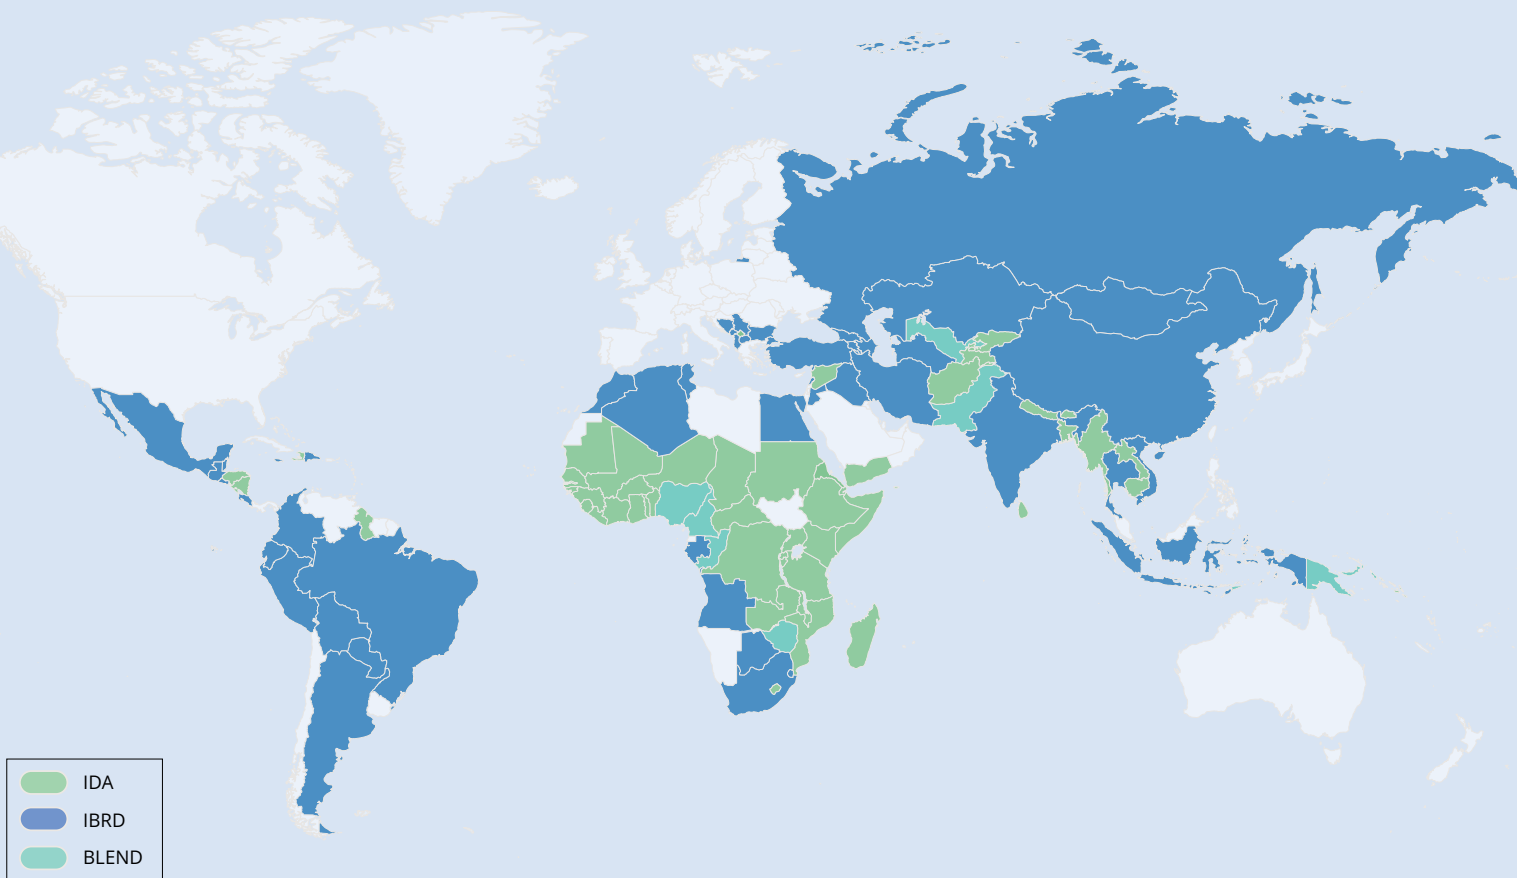

OFFICIALS AT MOZAMBIQUE'S MINISTRY OF FINANCE AND ECONOMY AND WORLD BANK STAFF CELEBRATE MOZAMBIQUE'S INTERNATIONAL WOMEN'S DAY, WEARING CAPULANAS (FROM LEFT, SUCÉNIA AMÉLIA CHURANA, NATÉRICA MACAMO, OLGA ANTÓNIO IGUANE, PARUL AGARWAL, EVA CATARINA UNCACHE DAMO LOPES PEDRO, AND EMÍLIA SITEO).

CHALLENGES

While the World Bank is committed to helping countries strengthen their debt management and providing financial assistance, delivering that support effectively requires accurate data and greater debt transparency. Yet, some of the 120+ low- and middle-income

countries that participate in the DRS face challenges in accurately collecting and reporting their debt data. Some common challenges include missing loans and transactions, imbalances stretched over the years, and inconsistent communications.

MAP OF DRS REPORTING COUNTRIES AND THEIR OPERATIONAL LENDING CATEGORIES

SOURCE: INTERNATIONAL DEBT REPORT 2022

MAPUTO, MOZAMBIQUE. PHOTO: HANSUELI KRAPP

WORKING TOGETHER

Following years of virtual correspondence that attempted to resolve debt data issues from far away. A technical assistance (TA) mission was provided to Mozambique to validate the loan-level databases, address data gaps, and reconcile any persisting issues. The mission allowed World Bank staff from headquarters and the Country Office to work side-by-side with government officials to improve their databases, reporting, and understanding of DRS methodology. This can help

resolve issues and overcome challenges in obtaining the best possible data. The mission was a collaborative partnership between several teams at the World Bank, including the Development Economics Vice Presidency, the Macroeconomics, Trade, and Investment Global Practice (MTI), and the Development Finance Vice Presidency. It leveraged MTI's country presence and Mozambique's commitment this fiscal year under the SDFP to report "error-free" DRS data to strengthen debt transparency.

MAPUTO, MOZAMBIQUE. PHOTO: PARUL AGARWAL/WORLD BANK

IMPACT

The TA mission made significant improvements in Mozambique's DRS reporting. Data inconsistencies between the DRS and the government's debt management system were successfully resolved, ensuring more accurate and reliable reporting in the future and helped in identifying future areas for improvement and expanded coverage. By working in person with the dedicated professionals at Mozambique's Debt Office allowed the sharing of knowledge, forge personal

connections, and fostered a deeper understanding of their challenges, goals, and expertise, thus strengthening the working relationship and building a solid foundation for future collaborations. In-person TA missions are valuable in enhancing debt transparency and data reporting quality. By strengthening debt transparency through TA missions, the World Bank can help countries like Mozambique accurately manage their debt and pave the way for sustainable development and economic growth.

IMPLEMENTATION OF THE INTERNATIONAL COMPARISON PROGRAM

PROJECT DESCRIPTION

The International Comparison Program (ICP) is a global initiative to collect comparative price and expenditure data in participating economies and to subsequently produce purchasing power parities (PPPs) and price level indexes (PLIs) for each economy. PPPs are used to convert volume and per capita measures of gross domestic product (GDP) and its expenditure components into a common currency.

The concept of PPP is well-known and widely used within the field of socioeconomic analysis. PPPs enable a wealth of metrics on economic output, material well-being, consumption, and investment, as well as a host of PPP-based indicators across the socioeconomic spectrum, many of which are used for tracking the Sustainable Development Goals (SDGs) and as crucial inputs into policymaking at the national and global levels. Furthermore, results from the current

ICP 2021 cycle will shed light on the impact of the COVID-19 pandemic on the global economy and progress towards development goals.

The ICP is one of the largest, and most enduring, statistical programs in the world. It is managed by the World Bank under the auspices of the United Nations Statistical Commission (UNSC), and relies on a partnership of international, regional, sub-regional, and national agencies working under a robust governance framework and following established statistical methodology in price data collection, in national accounts expenditure data compilation, in quality assurance, in technical assistance, and in the calculation and dissemination of results. This multi-agency collaboration ensures the comparability of results between economies, which is the fundamental tenet of the ICP, underpinning the wide usability of its results.

GLOBAL AND REGIONAL GOVERNANCE AND EXPERT GROUP MEETINGS

20+

TECHNICAL ASSISTANCE EVENTS

- 4 official phases of global validation
- Detailed breakdown of national accounts expenditure data
- Price data for household consumption, including housing and education, government consumption, and gross fixed capital formation

CONTINUOUS ON-DEMAND TECHNICAL ASSISTANCE TO REGIONS AND ECONOMIES

While the current ICP 2021 cycle has faced many challenges to its statistical activities brought about by the COVID-19 pandemic, the war in Ukraine, and the crisis in the Middle East, the implementing agencies at the national, regional, and global levels have sought to mitigate impacts by extending survey periods, adapting to virtual statistical capacity building, and providing guidance to address particular methodological and pricing issues arising from delayed and/or limited data collection surveys.

To ensure the highest standards of data quality during this unique and challenging time, extensive data validation continued at the national, regional, and global levels. Four official phases of global validation have been conducted for price data for household consumption, including housing and education, government consumption, and gross fixed capital formation, as well as a detailed breakdown of national accounts expenditure data for 170+ economies across six operational regions around the world. Guidance and advisory notes have also been prepared to ensure data quality for the ICP 2021 cycle, including three ICP COVID-19 guidelines and two ICP thematic guides. A special guidance note on estimating productivity adjustment factors for PPPs was also prepared.

The ICP global and regional implementing agencies also continued to organize on-demand virtual and in-person technical assistance to regions and economies to ensure data quality and to support economies that were facing more severe challenges. All participating economies have exhibited tremendous resilience in implementing ICP surveys in adverse circumstances.

The results of this well-coordinated partnership and enduring efforts by all ICP stakeholders are to be published in early 2024 in an analytical report and made available to users through a dedicated database and data visualizations.

EXPANDING USE OF PPPS AND ICP RESULTS

The International Comparison Program 2021 cycle results, released in 2024, will include 2021 results, revised 2017 results, and annual PPPs for 2018 to 2020. These results will allow policymakers, analysts, and researchers to examine in detail the impact of the COVID-19 pandemic on the global economy, prices, expenditures, output, and material well-being. Preparations are underway for the launch of the ICP 2024 cycle.

The use of ICP results is expanding: PPP-based indicators are replacing market exchange rate-based indicators, both in socioeconomic indicators and development monitoring used in policymaking at the national and the regional levels, and are integral to many multilateral administrative mechanisms. PPP-based indicators are also being used to monitor development progress at the global level, including in eight SDGs. ICP data are now also widely used in a new Food Prices for Nutrition indicator to measure access to healthy diets. The World Bank publication “PPPs for policymaking: a visual guide to using data from the ICP” provides an illustrative overview of the policy areas that rely on PPP-based indicators. These include the size of the economy and price levels; poverty and inequality; trade and competitiveness; labor costs, wages, and social safety nets; food and nutrition; health, education; energy and climate; infrastructure; human development; and administrative uses.

One ICP indicator – an economy’s price level index (PLI), calculated as the ratio of PPP over the market exchange rate – provides a measure of the differences in price levels between economies with the global average set to 100. PLIs are available for GDP and for many expenditure aggregates below GDP. This chart shows the ICP 2017 price level index for Actual Individual Consumption (AIC) – an aggregate that reflects all consumption expenditures directly benefiting households irrespective of the purchaser of the goods and services and thus provides a good measure for making cross-country comparisons of material well-being. If an economy’s PLI for AIC is lower than that of another economy, then the goods and services within AIC are less expensive than those in the other economy, and vice versa for the higher PLIs.

Policymakers, analysts, and other users are increasingly demanding more frequent and timelier ICP results to meet their needs. To that end, an approach to estimate global PPPs on an annual basis is under consideration and will seek to further integrate ICP activities with price and national accounts processes in national implementing agencies, build statistical capacity, and expand institutional knowledge.

PRICE LEVELS FOR INDIVIDUAL CONSUMPTION EXPENDITURE COMPONENTS BY REGION AND ECONOMY, 2017

INTERACTIVE GRAPH

UPDATE OF THE SYSTEM OF NATIONAL ACCOUNTS 2008 STATISTICAL STANDARDS

PROJECT DESCRIPTION

The System of National Accounts (SNA) represents a stage in the evolution of national accounting. To continue that evolution and to ensure the continuing relevance of the SNA for purposes of economic analysis and policymaking, further and constant research need to be carried out.

Periodic updates are necessary to reflect the real changes taking place within economies, the evolution of financial and fiscal instruments, and the improvements of accounting methodologies.

At its 51st session, the United Nations Statistical Commission requested the Intersecretariat Working Group on National Accounts (ISWGNA) to develop a roadmap for the revision

of the 2008 SNA for adoption by the Commission in 2025.

The ISWGNA, assisted by the Advisory Expert Group on National Accounts (AEG), oversees the overall 2008 SNA update program.

A three-pronged approach is envisaged for the update of the 2008 SNA:

- Undertaking technical research in prioritized and other national accounts issues and experimentation and testing of selected recommendations.
- Engaging in a broad consultation on the issues related to the thematic areas.
- Ensuring overall consistency with other statistical standards in the system of economic statistics.

- The global consultation process on the guidance notes, the annotated outlines, the consolidated list of changes and the updated chapters (ongoing);
- An article in the SNA News and Notes on the update process;
- Reports to the UNSC.

10 TASK TEAMS ESTABLISHED TO DRAFT PRACTICAL IMPLEMENTATION GUIDES IN COMPLEX NEW AREAS:

- Digitalization Task Team,
- Wellbeing and Sustainability Task Team,
- Joint Globalization Task Team,
- Joint Communication Task Team,
- Joint Financial and Payment Systems Task Team,
- Joint Informal Economy Task Team,
- Joint Islamic Finance Task Team,
- BPM Balance of Payments Task Team,
- BPM Current Account Task Team,
- BPM Direct Investment Task Team.

The SNA update process is on track and now at a very advanced stage. Initiated in 2018, the research and consultation effort has involved multiple task teams on priority work streams with broad representation from National Statistical Offices, NSOs, and the research community. Guidance notes have been developed by the task teams, circulated for global consultation and final recommendations endorsed by the AEG. Drafting of substantially revised chapters for the new SNA manual is well underway, along with a broad range of outreach activities to consult and inform compilers and data users undertaken throughout the update process. The SNA update project is entirely harmonized with a simultaneous update to the Balance of Payments manual, with joint task teams on overlapping issues and a collaborative decision-making process with the Balance of Payments committee. Detailed implementation strategies for the revised SNA manual are also now in development, with new workstreams established to develop practical implementation guidance in selected complex areas, such as data as an asset, marketing assets and natural capital.

The World Bank's input to the SNA update effort is coordinated by the Data Group's National Accounts Team. In addition to participation in the Intersecretariat Working Group on National Accounts, it has included substantive contributions via participation in a number of task teams, including Wellbeing and Sustainability and a sub-group on household distributions (co-lead with OECD), Communications (co-lead with IMF) and informal economy, among others. New guidance on how to measure and value renewable energy assets, endorsed for the new SNA standards, was contributed in partnership with the Changing Wealth of Nations Team in the World Bank's Environment and Natural Resources Global Practice. This measurement guidance will be key in tracking the transition from fossil fuels to renewable energy sources. While many contributions to the SNA update process are provided in kind, the funded aspects of the project, such as activities of expert consultants on the editorial team, the lead editor and project manager along with required travel and outreach activities are managed by Data Group via the World Bank's Global Data Facility umbrella trust fund.

HIGHLIGHTS OF THE ADVISORY EXPERT GROUP ON NATIONAL ACCOUNTS (OCTOBER 16-18, 2023, PARIS, FRANCE)

- With guidance developed by task teams finalized and approved, consultants have delivered very effectively on all expectations with many high-quality chapter drafts presented and discussed at the meeting. Lead reviewers have been designated for initial review of the chapters, which are subsequently circulated to the full AEG for review and comment prior to global consultation. Engagement of the AEG members in the process is excellent and highly productive. It is clear the SNA update project is on target to meet required time frames for endorsement by the UNSC.
 - The “Master Log of Changes,” a succinct summary document describing all planned updates targeted for the 2025 SNA, has been developed by the lead editor and circulated for review and consultation. This will be the mechanism by which planned changes will be communicated for endorsement by the UNSC in March of 2024.
 - Chapter 2, a new introductory chapter on Wellbeing and Sustainability positions the System of National Accounts vis-à-vis the “Beyond GDP” Agenda. It is the first to be subject to global consultation and a range of constructive feedback was discussed, along with the balance of content with additional detailed chapters on Wellbeing and on Sustainability, respectively.
 - A harmonized glossary of terms which standardizes terminology across the BoP and SNA standards was the result of enormous effort and consultation by the respective teams and has garnered considerable accolades and constitutes a significant step forward for users.
- Terminology was also simplified wherever possible and will be adopted in the revised standards moving forward. Via our role on the Communications task team, the World Bank contributed substantially to this effort.
- Planned directions on supporting country implementation of the new standards not only includes the development of practical implementation guidance where needed but are also envisaged to include technical assistance for countries with limited capacity with engagement for the IMF, World Bank, and United Nations.
 - The collaborative engagement with BOPCOM, as well as with other statistical communities has been excellent throughout the harmonized update process. A proposal was tabled by the IMF to examine ways to expand lessons learned and explore potential for more coordinated updates to a broader range of related standards (GFS, SEEA, classifications as International Standard Industrial Classification (ISIC) and Central Product Classification (CPC)). Terms of reference were developed for a group including representatives from the relevant governance bodies to further examine the issue and develop a proposal for consideration by the UNSC. The objective is not to change governance, but rather to develop a framework of common tools and processes to plan and update manuals in an efficient and coordinated manner.
 - The chair of the ISWGNA rotates every two years among each of the five participating international organizations. While the OECD is the current chair, in 2024, the World Bank will assume the role of Chair of the ISWGNA.

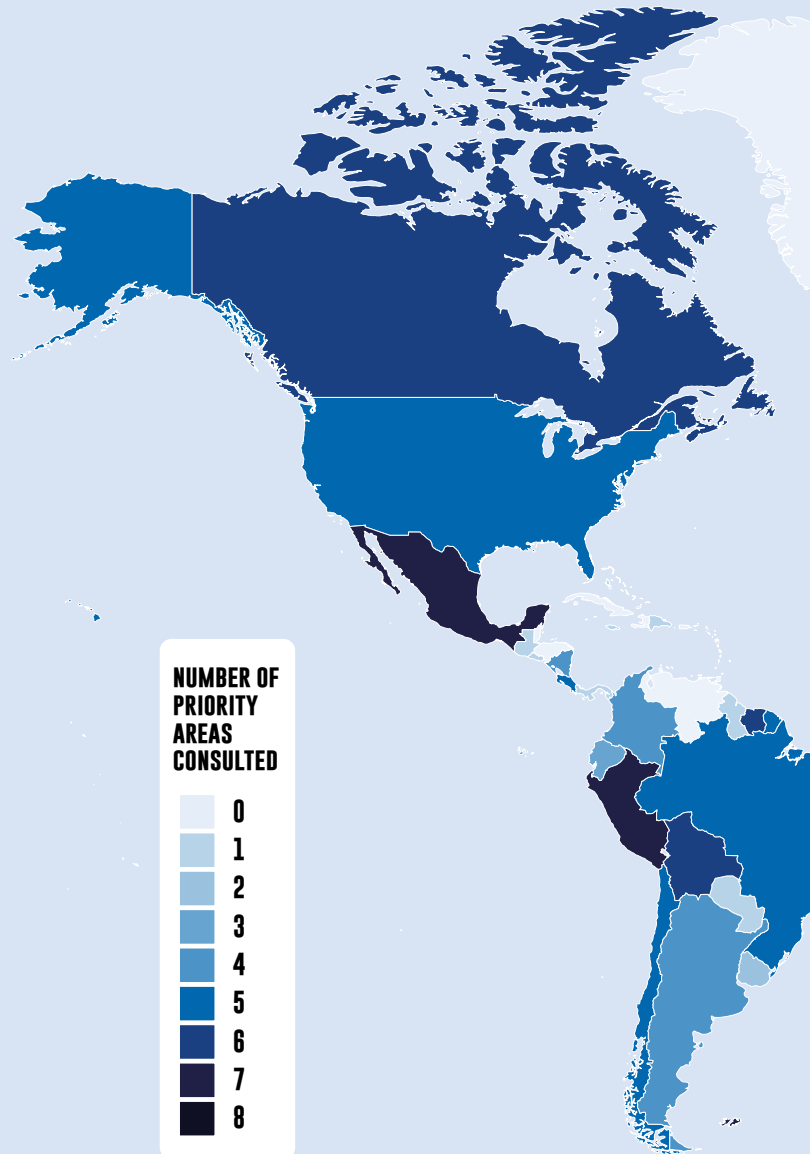

GLOBAL COUNTRY INVOLVEMENT

The SNA update process has come very far since it began in 2018 and a significant highlight of the progress so far has been the broad global participation in the consultation process. Past versions of the SNA (1960, 1993, 2008) were developed in large part by experts in the ISWGNA and participating organizations. This time the process has been intentionally broadened to include participation from NSOs around the world to (1) keep countries informed on the updating of the 2008 SNA; (2) foster global consultation on recommendations for the update of the 2008 SNA through consultation on the guidance notes, as well as consultation on the draft chapters of the updated SNA; and (3) work with countries on the testing and early implementation of new recommendations arising from the guidance notes.

Deliverables from each stage of the update process (guidance notes, annotated outlines, draft chapters) as well as the work from the various task teams have included outreach activities in the form of webinar to ensure feedback is fundamental to the final recommendations in the new SNA manual.

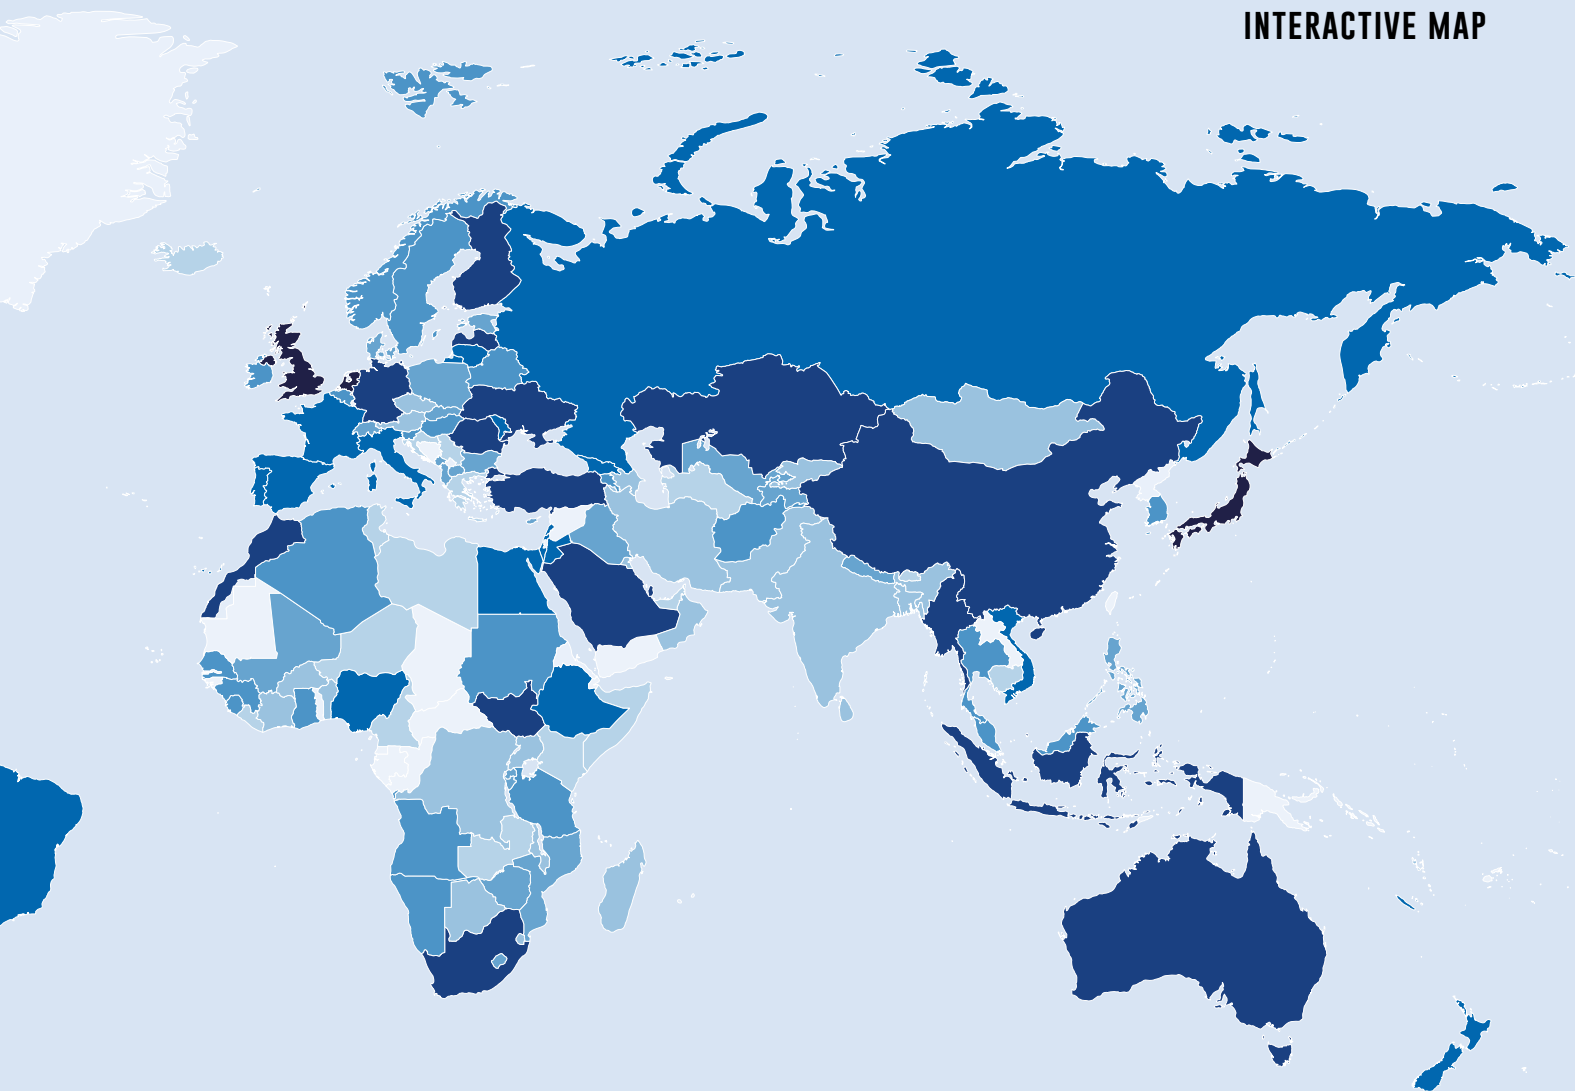

The outreach has resulted in essential feedback from 181 countries in the form of over 3,200 responses. These contributions are essential to the determination of guidance that will be included in the SNA manual and help ensure that broad and diverse perspectives and experiences are considered.

PARTICIPATION IN GLOBAL CONSULTATIONS OF THE SNA UPDATE

INTERACTIVE MAP

SPACE2STATS

PROJECT DESCRIPTION

Often in development, we look to national comparisons to find examples of effective policy, whether this is in economic growth, job creation, or public service delivery. However, this focus on national comparisons limits our perspective to one scale of analysis. Within most countries, there is typically more than one level of governance (and therefore policy and public investment), but also uneven initial endowments and resources, levels of private investment and capital flows, and other unique factors of place. Exploring these differences at various geographic scales can shed light on why development policy can be more effective in one region than another. For reasons of comparability, cost-effectiveness, and the mandates of data collectors, these spatially disaggregated data are often not available from one country to the next, or if it is available, it is not comparable.

The Space2Stats program will invest in two distinct projects aimed on standardizing access to foundational geospatial data, at various sub-national levels, with a focus on enabling access for development practitioners, country counterparts, and academics. Both programs are focused on open innovation, with open tools and code, alongside open datasets in established World Bank repositories.

Space2Stats database: A globally consistent database of geospatial aggregates at the administrative 2

level. The database will publish a standardized, open dataset based on official World Bank boundaries, and will allow users to bring their own operational boundaries to support their specific work programs.

Survey Geo-enhancement: the World Bank's Living Standard and Measurement Study (LSMS) program has been using a standard methodology to attach geospatial information to their surveys for over 10 years. This pillar of Space2Stats is focused on standardizing, documenting, and expanding that work program. The team has completed documentation of the methodology, has begun standardizing the reporting of the geo-enhancement work, and has held preliminary discussions on expanding to other survey types (Joint Data Center refugee surveys, multi-tier framework for energy access surveys, etc.).

Leveraging these two pillars, the Space2Stats team is committed to the following work streams that will leverage the methodologies and database developed in the Space2Stats project:

1. **Generate spatially disaggregated welfare estimates:** understanding the spatial distribution of welfare is fundamental to planning, implementing, and evaluating development projects. The Space2Stats database will be used

to generate spatially disaggregated estimates of welfare. Additionally, the open tools and methods will allow others to bring their authoritative source data to generate the same kinds of insights while keeping their original data safe and secure.

2. Integrate spatial data on production from business registers and economic censuses:

The World Bank has privileged access to a variety of data that could provide meaningful insight into questions of economic development. We are exploring ways to integrate these data into the Space2Stats database while maintaining our commitments to the original data providers.

NEW LINES OF WORK

While the primary focus of the project are the two pillars of the Space2Stats database and the geo-enhancement expansion, we have added two new independent lines of work to support the initiative:

Administrative boundaries:

To support the Space2Stats work, the team will need frequently updated and more open (i.e. publicly available) administrative boundaries than currently exists within the World Bank. We have initiated a task to standardize and publish an administrative 2 database of boundaries that adheres to World Bank cartographic standards. This project is still in its infancy, but we have performed initial research and outreach.

Market access indicators in health:

One of the most frequently requested metrics at the World Bank is market access. While the team has successfully developed multiple tools for investigating such questions, this line of work is dedicated to standardizing the approach and implementing it in several health-focused projects. Then, the team will integrate the results into the Space2Stats database.

 COUNTRIES

The Space2Stats project kicked off in earnest in May, 2023, and we have been focused on developing the methodology and onboarding consultants and firms to support the long-term vision. In addition, we already have multiple projects looking to the Space2Stats database for support.

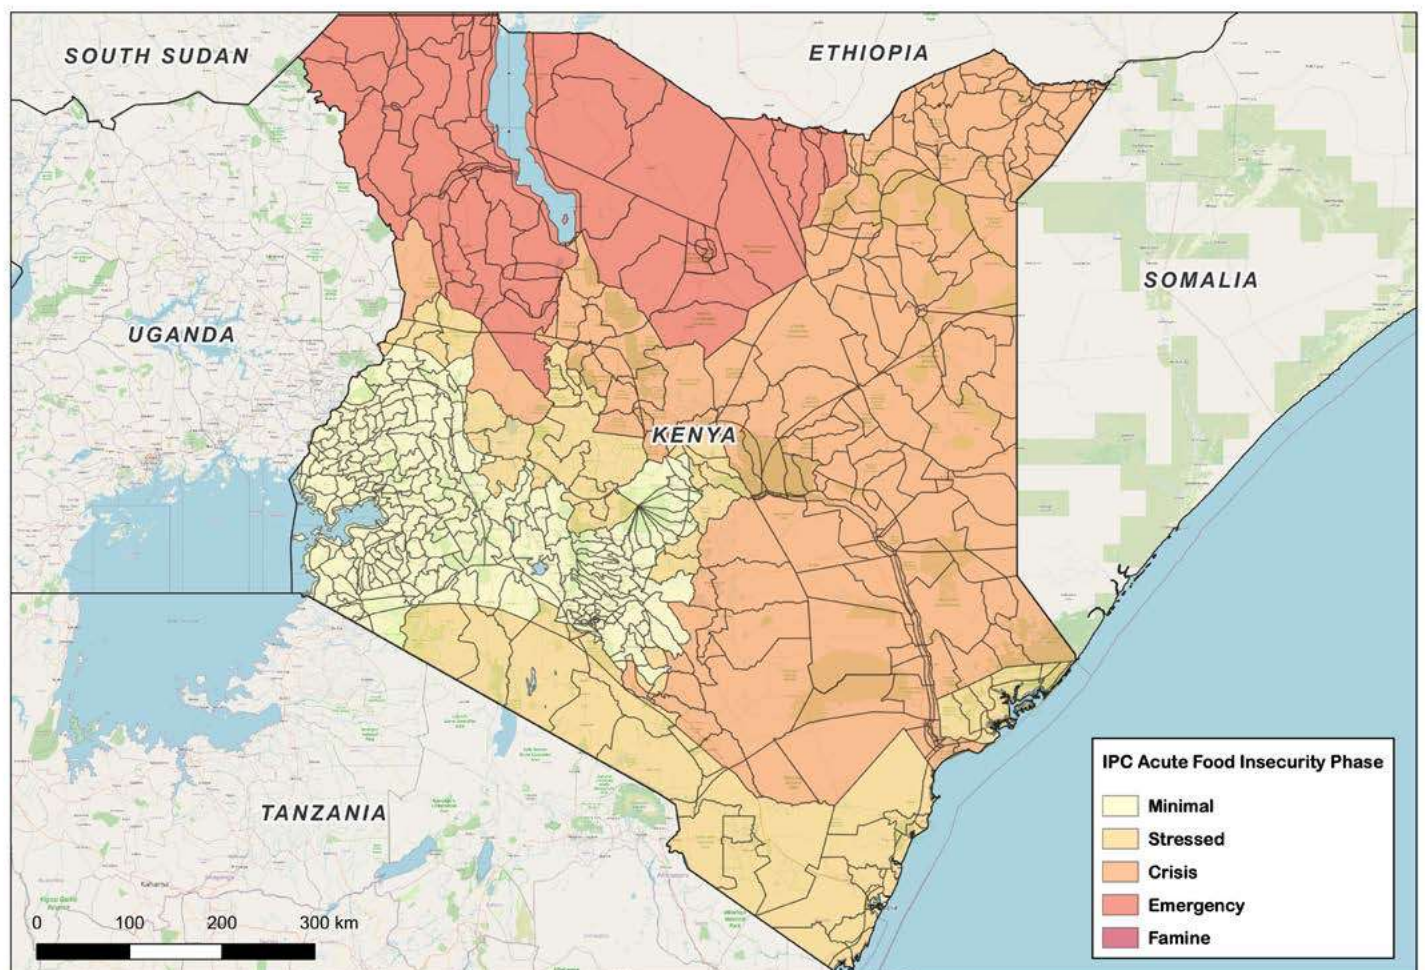

APPLICATIONS IN FOOD INSECURITY

One of the first projects to partner with the Space2Stats initiative was the Global Food and Nutrition Security Programmatic Advisory Services and Analytics. As part of a comprehensive program on food and nutrition security, the team is developing data products to monitor food crises in real time. This team is looking for a steady stream of geospatial data that captures climatic shocks such as droughts and floods. These indicators will be combined with food security

classifications, resulting in a dataset that can be used to monitor crises, understand drivers, and enable advanced analytics. This objective requires data to be made available in near real-time and for those data to be easy to manipulate and aggregate across multiple sources.

The food security classifications come from Famine Early Warning Systems Network (FEWS-NET), which provides food-security classifications in a hybrid

FIGURE 1 - ACUTE FOOD INSECURITY PHASE BY FEWS-NET, UPDATED FEBRUARY 2023. THE FOOD SECURITY AREAS ARE CREATED THROUGH AN INTERSECTION OF OFFICIAL BOUNDARIES AND LIVELIHOOD ZONES AND PRESENT ISSUES WHEN TRYING TO INTEGRATE WITH OTHER SPATIAL DATA.

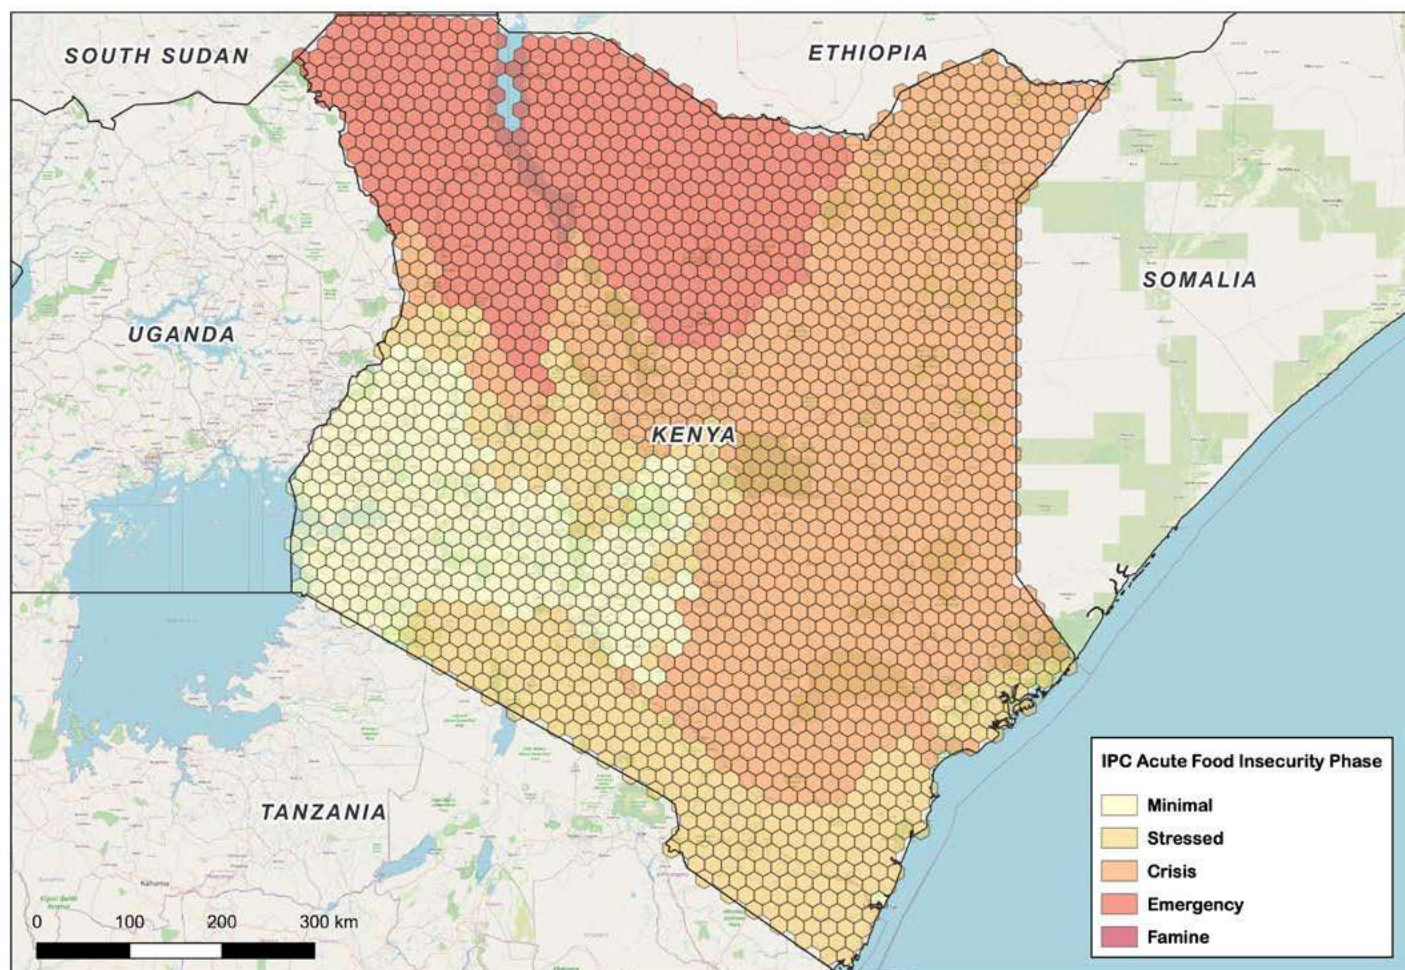

of administrative divisions and biomes, see FIGURE 1 below.

While the open nature of the FEWS-NET data is ideal, the unique shape and extent of these data make them complicated to integrate with other datasets. It is much easier to manage and maintain the database by aggregating to a standard geometric boundary, such as a hexagon (for example, see the same data presented using an

H3 grid in the figure below). The H3 grid is the primary aggregation level for everything produced by the Space2Stats program and will allow us to compare a variety of datasets. Finally, the goal is for the Space2Stats program to feed all the required datasets directly to the Food Security analytics program to simplify their data management and to potentially spread the use of the food security data.

FIGURE 2 - COMBINATION OF THE FEWS-NET AGGREGATIONS AND THE H3 GRID FROM SPACE2STATS. BY AGGREGATING TO THE STANDARD HEXAGON USED IN THE SPACE2STATS DATABASE, MORE CONSISTENT AND ROBUST CALCULATIONS CAN BE MADE.

LOOKING AHEAD

SUPPORTING THE REALIZATION OF THE DATA REVOLUTION

Supporting the realization of the Data Revolution. In the 2014 report of The United Nations Secretary-General's Independent Expert Advisory Group (IEAG) on a Data Revolution for Sustainable Development, the IEAG explained that, taken together, the rapid acceleration and improvement in human capacity to collect, manage, combine, analyze, and share data, mean that humanity is now in the thick of a "Data Revolution".¹ The World Bank's 2021 World Development Report: Data for Better Lives emphasizes that to make the most of this revolution, a commensurate evolution is needed by government, the private sector, and civil society to make the most of data and analytical insights for a range of social, economic, and sustainable benefits.²

The Global Data Facility was created to ensure that demand drives funding for data and statistics priorities at the global, regional, national, and community levels. This demand continues to evolve – from an increasing plurality of data producers – to put data and statistics to work to meet and overcome development challenges.

¹ UNITED NATIONS, A WORLD THAT COUNTS: MOBILIZING THE DATA REVOLUTION FOR SUSTAINABLE DEVELOPMENT AT PAGE 2 (2014), AVAILABLE AT: [HTTPS://WWW.UNDATAREVOLUTION.ORG/WP-CONTENT/UPLOADS/2014/11/A-WORLD-THAT-COUNTS.PDF](https://www.undatarevolution.org/wp-content/uploads/2014/11/A-WORLD-THAT-COUNTS.PDF)
² THE WORLD BANK, 2021 WORLD DEVELOPMENT REPORT: DATA FOR BETTER LIVES AT PAGE 3 (2021), AVAILABLE AT: [HTTPS://WWW.WORLDBANK.ORG/EN/PUBLICATION/WDR2021](https://www.worldbank.org/en/publication/wdr2021)

NEAR TERM

The Global Data Facility team is working with a range of development partners to secure and coordinate financial and technical expertise to deliver quickly and efficiently to meet this evolving demand through flexible and adaptive country-led approaches. This includes delivering and coordinating priority investments in - and technical expertise on - the fundamentals and at the frontier of data and statistics.

In addition, the Global Data Facility is prioritizing additional financing and insights to support new country data system innovations, modernization, and integration of new system-wide approaches to statistical processes. The immediate priority is to expand and deepen continuing collaboration and coordination with countries to meet urgent demand to modernize their data and statistical systems and to deliver holistic support for these countries' crucial data collection, management, analysis and dissemination priorities. This includes support for the implementation of harmonized data and statistics assessments and diagnostics to inform and help catalyze new, long-term investments in developing countries' data and statistical systems (including World Bank IDA/IBRD financing), to drive evidence-based policymaking for social, economic, and sustainable development. It likewise includes expanding support for responsible use of alternative data collection modes and data sources to generate key insights for development priorities, with an emphasis on mobile phone data, administrative data, remote sensing, and satellite imagery.

COORDINATING TO GET IT RIGHT

The Global Data Facility team is simultaneously working to further expand and strengthen coordination of financing and technical support for data and statistics across developing countries. New and additional partner commitments through the Global Data Facility are actively enabling stronger international cooperation, less fragmentation, better value for money and time, more leveraged financing, and most importantly, more durable transformations of countries' data and statistical systems.
