

Maharashtra

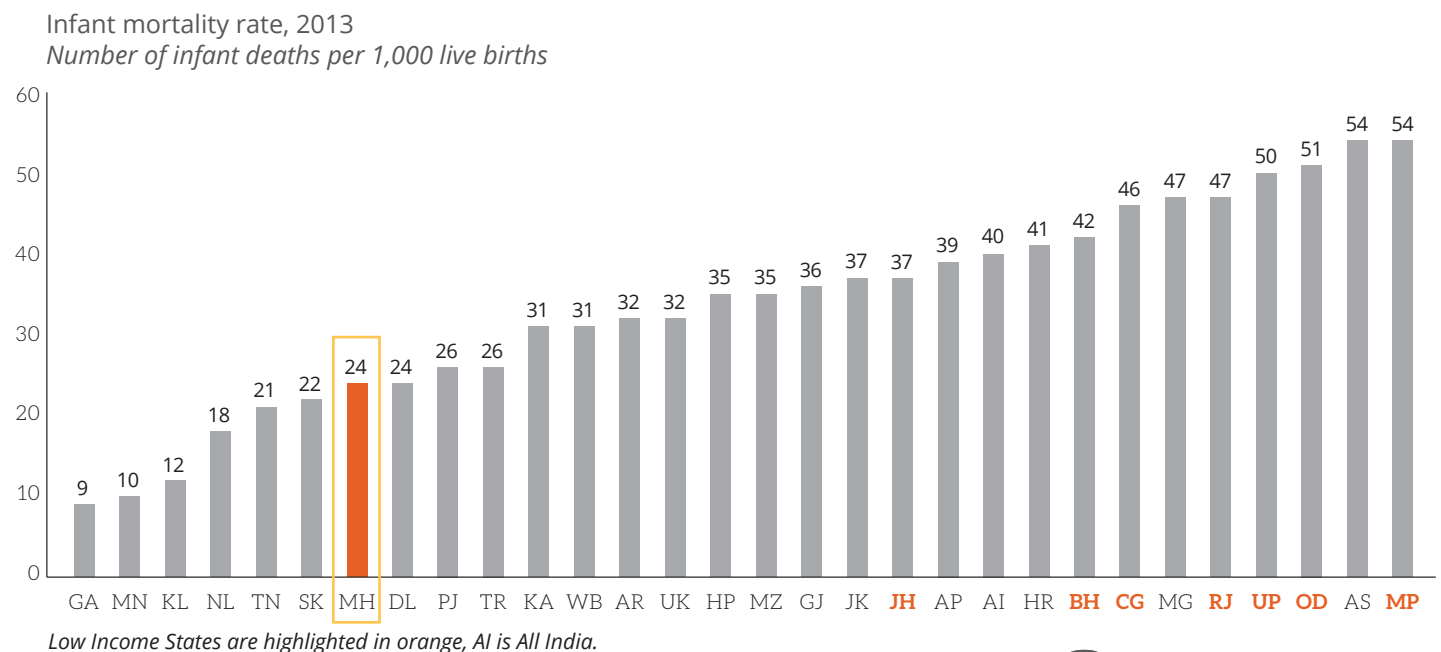

Health and Education

Health and education outcomes in Maharashtra are improving. Nonetheless, progress is slow. On the bright side, infant mortality, already lower than in many other states, is declining. Moreover, a larger share of Maharashtra's children are now in school, and more adults have completed secondary school than in many other states. On a less positive note, malnutrition levels in Maharashtra are higher than in other states, even among the rich, and open defecation among lower income households is high. And while improvements in school enrollments for the younger generation are a bright spot, better learning outcomes have not followed. Interestingly, private school enrollment in Maharashtra is higher than in most other states.

Infant mortality is declining in Maharashtra
