# Foreword

The COVID-19 pandemic brought unprecedented challenges to low- and middle-income countries. Even prior to the onset of the crisis, rising public debt levels and heightened debt vulnerabilities were already a concern in many countries. These vulnerabilities increased dramatically in 2020. The crisis drove up financing needs and thereby public borrowing, while weakening individual countries' economic fundamentals and capacity to service and repay public debt. The risk now is that too many countries will emerge from the COVID-19 crisis with a large debt overhang that could take years to manage.

The external debt stock of low- and middle-income countries in 2020 rose, on average, 5.6 percent to \$8.7 trillion. However, for many countries the increase was in double digits. The external debt stock of countries eligible for the Group of Twenty (G-20) Debt Service Suspension Initiative (DSSI) rose, on average, 12 percent to \$860 billion and in some of them by 20 percent or more. For most countries the rise in external indebtedness was not matched by the growth of gross national income and exports.

A large-scale shift in the approach to debt transparency is needed to help countries assess and manage their external debt risks and work toward sustainable debt levels and terms. This is particularly urgent given the scheduled expiration of the DSSI at the end of 2021. The World Bank has long played a leading role in the compilation and dissemination of external debt statistics. *International Debt Statistics*, the World Bank's flagship publication on external debt data, is the most important source of verifiable information on the external debt of low- and middle-income countries and offers a unique dataset that can shape the solutions that will be needed in the coming years.

*International Debt Statistics 2022* raises the bar on debt transparency. The 2020 dataset has

been expanded to provide more detailed and disaggregated data on external debt than ever before. The data now break down each borrowing country's external debt stock into the amounts owed to each official and private creditor, the currency composition, and the financial terms of the loans extended. In addition, for DSSI-eligible countries, the dataset includes the debt service deferred in 2020 by each bilateral creditor and the projected monthly debt-service payments that will be owed on this debt. More importantly, the borrower classification now presents the Central Bank as a separate borrower entity. Beginning with 2020, the data increasingly reflect external borrowing by state-owned enterprises, and most 2020 data are actual, not estimated, transactions.

The transparency of data on debt must evolve to keep pace with an ever-changing creditor landscape and with new and increasingly complex debt-like instruments and data requirements. We are working hard to be able to capture all debt instruments, including external borrowing by state-owned enterprises, Central Bank deposits, and currency swaps. We are also collecting information on loan guarantees and collateral arrangements.

Reliable and comprehensive debt data are the cornerstone of good development outcomes. Borrowing allows governments and growing private sectors to mobilize the resources they need to invest in innovation, health systems, education, and infrastructure and build durable economic recoveries. Debt transparency invites new investment and helps safeguard long-term sustainability. The World Bank is committed to working with governments and partners to achieve that outcome—by continually improving debt data coverage, quality, timeliness, and transparency.

David Malpass

# Acknowledgments

This volume was prepared by the Debt Statistics Team of the Development Data Group (DECDG) at the World Bank, led by Evis Rucaj and comprising Parul Agarwal, Arturo Albarran-Cortes, Arzu Aytekin Balibek, Kifaye Didem Bayar, Daniella Kathyuska Bolanos-Misas, Allen Charles Church Jr., Wendy Ven-dee Huang, Malvina Pollock, Rubena Sukaj, Tin Yu To, Rasiel Vellos, and Bedri Zymeri. The overview of current developments was prepared by the Debt Statistics Team; Aart Kraay, Director of Development Policy and Deputy Chief Economist, Development Economics (DEC), and the MTI Global Macro and Debt team at the World Bank provided valuable feedback on the overview section; and the final statistics were reviewed by country economists. The team was assisted by Nancy Kebe. The work was carried out under

the management of Nada Hamadeh, Program Manager, and the direction of Haishan Fu, Director, DECDG. Valuable guidance and input was provided by Carmen M. Reinhart, Senior Vice President and Chief Economist of the World Bank Group.

*International Debt Statistics* electronic products were prepared by a team led by Anna Maria Kojzar and Sebastian Ariel Dolber and comprising Ramgopal Erabelly, Fatih Dogan, Rajesh Kumar Danda, Gangadhar Simhani, Surya Anandan, Vijayakumar Juttu Mohan, and Palani Devi Somasundaram. The cover was designed by Jomo Tariku. Jewel McFadden, acquisitions editor; Michael Harrup, production editor; and Orlando Mota, print coordinator, for the World Bank's formal publishing program coordinated the publication and dissemination of the book.

# PART I

## Overview

---

# Overview

The world economy is still reeling from the once-in-a-generation crisis, the COVID-19 pandemic, that hit every part of the globe in 2020 and brought economic activity to a grinding halt. Governments around the world responded rapidly to stem both the health and economic contagion with fiscal and monetary stimulus packages. Hopes for a quick recovery were dashed when the second wave of the pandemic hit the world's major economies in October 2020. World gross domestic product (GDP) fell by an estimated 4.3 percent in 2020—the sharpest contraction of output since the Great Depression. Developed economies were most severely impacted by the pandemic, and output is estimated to have shrunk by 5.6 percent in 2020. Low- and middle-income countries experienced a relatively less severe contraction, with output estimated to have contracted by 2.5 percent in 2020. There were, however, significant differences in the size of the shock among low- and middle-income countries, with those in Latin America and the Caribbean hardest hit. Countries in East Asia and the Pacific fared better, and their output is estimated to have expanded by 1 percent in 2020, thanks to China's robust recovery.

Against this unprecedented and uncertain backdrop, the development in debt stocks and financial flows to low- and middle-income countries in 2020 was a story of highs and lows. Rapid intervention and extraordinary support from multilateral institutions, led by the World Bank and the International Monetary Fund (IMF), raised net inflows from multilateral creditors to \$117 billion, the highest level in a decade. The Debt Service Suspension Initiative (DSSI) was launched by Group of Twenty (G-20) countries in April 2020 to assist the poorest and most vulnerable low- and middle-income countries in managing the adverse impacts of the COVID-19 pandemic. It offered 73 International Development Association (IDA)-eligible and least developed countries a temporary suspension of debt-service payments

owed to official bilateral creditors. The suspension period was originally set for payments falling due from May 1 to December 31, 2020, but was subsequently extended to end-December 2021. Bond issues from low- and middle-income countries were at a record high of \$457 billion in 2020, but issuance from China accounted for nearly half of this amount. Market borrowers in Sub-Saharan Africa were priced out of the bond market for much of the year, and investor retreat from domestic markets in many low- and middle-income countries' biggest borrowers led to large-scale capital flight and shrank debt inflows. Net debt inflows rose 9 percent to \$435 billion, but the 26 percent increase in inflows to China masked a marginal, 1 percent increase in debt inflows to other low- and middle-income countries.

Many developing countries entered 2020 in a vulnerable position, with public external debt already at elevated levels. Fiscal support to mitigate the impacts of COVID-19 pushed debt levels in some countries to record highs. The external debt stock of low- and middle-income countries rose, on average 5.3 percent in 2020, about the same pace as the two prior years. Prior to the onset of the COVID-19 pandemic, rising public debt levels and heightened debt vulnerabilities were already a cause for concern in many of the world's poorest IDA borrowers, and these have been further exacerbated. In 2020, the external debt stock of IDA DSSI-eligible countries rose, on average, 12 percent in 2020, and for nine of these countries it rose 20 percent or more. The rise in external indebtedness was not matched by gross national income (GNI) and exports growth. Low- and middle-income countries external debt-to-GNI ratio rose to 29 percent in 2020 from 27 percent in 2019, and the debt-to-export ratio increased to 123 percent from 106 percent in 2019. The worsening of debt indicators was widespread across all geographic regions.

Equity inflows to low- and middle-income countries fell 15 percent in 2020 to \$473 billion.

The pandemic had a significant impact on foreign direct investment (FDI) flows. Lockdowns around the world slowed existing investment projects, and the prospect of a global recession deterred investors and led multinational entities to reassess the viability of new projects. Developed countries suffered the largest contraction, but the downturn was global. FDI inflows to low- and middle-income countries combined fell, on average, 14 percent in 2020 to \$435 billion, the lowest level in a decade. For low- and middle-income countries, excluding China, FDI fell 23 percent in 2020. Investors in portfolio equity continued to favor China and India in 2020, but overall portfolio equity inflows fell 19 percent from the 2019 level.

*International Debt Statistics* is the World Bank's flagship publication on external debt data instituted in response to the first global oil crisis of 1973 and now in its 48th consecutive year of publication. This edition provides disaggregated information on public and publicly guaranteed debt stocks and flows by creditor country, including official bilateral creditors and multilateral institution entities. The World Bank has long played a lead role in the compilation and dissemination of external debt statistics and the enhancement and expansion of debt data coverage to meet institutional needs, and the needs of policy makers, analysts, and the broader international community. The task of managing COVID-19-related debt vulnerabilities and crises gave rise to new demands for more granular data regarding the volume and terms of amounts borrowed and lent. For this reason, the DSSI, launched by the G-20 in April 2020 and implemented with the assistance of the World Bank and the IMF, set a standard for greater debt data transparency by member countries of the World Bank and the IMF, as borrowers and as lenders.

This year's publication raises the bar on debt transparency. The 2020 dataset has been expanded to provide more detailed and disaggregated data on external debt than ever before. It now includes information on average lending terms by creditor country (commitment amounts, maturity, grace period, interest rate, and grant element) and the currency composition of debt stock. For DSSI-eligible countries the dataset has expanded to include debt service deferred in 2020 by each bilateral creditor and the projected monthly debt-service payments owed to bilateral

creditors in 2021. The borrower classification now shows Central Bank debt, including new debt instruments. A new debt statistics website has also been launched to provide a user-friendly one-stop shop, with enhanced data query capabilities for access to the IDS dataset and other debt statistics.

*International Debt Statistics 2022* presents comprehensive stock and flow data for 123 low- and middle-income countries that report to the World Bank Debtor Reporting System (DRS) and a summary overview of the key elements driving outcomes in 2020 debt stocks and financial flows. The headline numbers mask divergent trends because of the dominance of the largest economies. This is particularly so for China, where the volumes of financial flows and external debt stock are not large relative to the size of the domestic economy but are significant in relation to those of other low- and middle-income countries. To assist in the interpretation of the data, the overview looks behind the headline numbers and analyzes recent developments and trends at the regional and country level as well as for the subgroup of DSSI-eligible countries.

### Key Messages of the 2020 Data Are as Follows:

- Net financial (debt and equity) flows to low- and middle-income countries fell for the second consecutive year in 2020 to \$909 million. Net debt inflows rose 9 percent to \$435 billion (\$400 in 2019), but net equity inflows fell 15 percent to \$473 billion (\$554 billion in 2019). FDI inflows fell 14 percent to \$435 billion, the lowest level in a decade, and portfolio equity inflows fell 19 percent to \$39 billion.
  - Over half of net financial flows (debt and equity) to low- and middle-income countries in 2020 were accounted for by China, the largest recipient. Net financial flows to China rose 33 percent in 2020 to \$466 billion. Net debt inflows to China rose 62 percent to \$233 billion (\$144 billion in 2019), and net equity inflows rose 12 percent to \$233 billion (\$207 billion in 2019).

- Net financial (debt and equity) inflows to low- and middle-income countries excluding China fell 26 percent in 2020 to \$443 billion (\$602 billion in 2019). Net debt inflows fell 21 percent to \$202 billion (\$256 billion in 2019), and net equity inflows fell 31 percent to \$240 billion (\$346 billion in 2019).
- Low- and middle-income countries' combined external debt stocks at end-2020 were \$8.7 trillion. They rose 5.3 percent in 2020, an annual rate of increase comparable to that in 2018 and 2019. Long-term public and publicly guaranteed external debt rose 10 percent in 2020 to \$3.7 trillion, equivalent to 43 percent of total external debt stock. Long-term private non-guaranteed debt rose 3 percent to \$2.8 trillion. Short-term debt was unchanged at \$2.2 trillion.
- The external debt stock of DSSI-eligible countries rose 12 percent in 2020 to \$860 billion (\$770 billion in 2019). Long-term public and publicly guaranteed debt rose 14 percent to \$618 billion (\$541 billion in 2019). Debt owed to multilateral creditors, including the IMF, rose 22 percent to \$295 billion (\$243 billion in 2019), equivalent to 48 percent of public and publicly guaranteed debt stock at end-2020.
- Net debt inflows to low- and middle-income countries rose 9 percent in 2020 to \$435 billion (\$400 billion in 2019). Long-term debt inflows rose 13 percent to \$419 billion (\$372 billion in 2019). Short-term debt inflows fell 43 percent in 2020 to \$16 billion (\$28 billion in 2019).
  - Net debt inflows to low- and middle-income countries excluding China fell 21 percent to \$202 billion (\$256 billion in 2019). Net long-term debt inflows rose by 1 percent to \$217 billion (\$215 billion in 2019). Short-term debt contracted to an outflow of \$15 billion (\$41 billion inflow in 2019).
- Net debt inflows of external public debt to DSSI-eligible countries rose 25 percent in 2020 to \$71 billion, the highest level of the decade. Net inflows from multilateral creditors, including the IMF, were \$42 billion, and net inflows from bilateral creditors were \$10 billion.
- Bondholders and multilateral institutions accounted for 95 percent of long-term debt inflows to low- and middle-income countries in 2020.
  - Net inflows from bondholders were \$280 million in 2020, 10 percent higher than the comparable 2019 figure, and equivalent to two-thirds of 2020 long-term debt inflows. Bondholders accounted for 91 percent of long-term debt inflows to China and, on average, for 44 percent of long-term debt inflows to other low- and middle-income countries.
  - Net debt inflows from multilateral creditors doubled in 2020 to \$117 billion, equivalent to 90 percent of inflows from official creditors. Inflows from multilateral creditors accounted for, on average, two thirds of long-term debt inflows to low- and middle-income countries in 2020, excluding China. Net inflows from the World Bank (International Bank for Reconstruction and Development [IBRD] and IDA) rose 42 percent in 2020 to \$27 billion.
- New bond issuance by the 123 low- and middle-income countries reporting to the DRS reached an all-time high of \$457 billion in 2020, 14 percent higher than 2019 (\$400 million). China accounted for close to half (48 percent) of bonds issued in 2020.
- In low- and middle-income countries, excluding China, the ratio of debt to GNI rose to an average of 42 percent in 2020 (37 percent in 2019) and the debt-to-export ratio increased to an average of 154 percent (126 percent in 2019). The worsening of debt indicators was widespread and impacted countries in all geographic regions.
- For DSSI-eligible countries debt indicators worsened significantly over the past decade. In 2020, only 44 percent of DSSI-eligible countries had a debt-to-GNI ratio at or below 60 percent and in 7 percent of DSSI-eligible countries it exceeded 100 percent. In 2020, 21 percent of DSSI eligible countries had a debt-to-export ratio over 250 percent.

## Aggregate Financial Flows to Low- and Middle-Income Countries

Financial flows to low- and middle-income countries fell for the second consecutive year in 2020. Aggregate net financial flows, debt and equity combined, totaled \$909 billion in 2020, 5 percent lower than the comparable figure for 2019. Measured relative to borrower countries' GNI, aggregate financial flows were equivalent to 3 percent, on par with 2019 but short of the 5.7 percent of GNI in 2011. The decline in net financial flows was the outcome of a 9 percent rise in net debt inflows (gross disbursements of new financing minus principal payments) to \$435 billion from \$400 billion in 2019, and a 15 percent contraction in net equity inflows. Foreign direct investment inflows, long considered the most resilient and least volatile component of financial flows, fell 14 percent in 2020 to \$434 billion, their lowest level in a decade. Portfolio equity inflows dropped 19 percent to \$39 billion.

China accounted for over half of the combined aggregate net inflows to low- and middle-income countries in 2020. Aggregate financial flows to China rose 33 percent in 2020 to \$466 billion, equivalent to 51 percent of aggregate financial flows to all low- and middle-income countries. Inflows to China were driven by a 62 percent increase in net debt inflows to \$233 billion, from \$144 billion in 2019, and a 12 percent rise in net equity inflows also to \$233 billion (see box O.1). This was in sharp contrast to aggregate net financial flows to

other low- and middle-income countries, which fell 26 percent in 2020 to \$443 billion, from \$602 billion in 2019. The decline was due to a 21 percent contraction in debt inflows and a steeper 31 percent fall in net equity inflows. Within net equity flows, FDI fell 23 percent and portfolio equity flows were negative with an outflow of \$24 billion compared to a small, \$3 billion inflow in 2019.

Aside from China, the downturn in aggregate financial flows to the largest borrowers was much sharper than to other low- and middle-income countries. Aggregate financial flows to low- and middle-income countries' nine largest borrowers, excluding China (defined on the basis of end-2020 external debt stock), fell to \$151 billion in 2020, close to half the comparable figure for 2019.<sup>1</sup> This reflected a near total collapse in net debt inflows, which plummeted from \$110 billion in 2019 to \$4 billion in 2020 and a 33 percent contraction in net equity inflows. In contrast, other low- and middle-income countries recorded a 7 percent rise in aggregate financial inflows in 2020 to \$292 billion underpinned by a 36 percent increase in net debt inflows to \$198 billion. However, net equity inflows fell 26 percent, in parallel with those of the nine major borrowers. As a result, net debt inflows accounted for 68 percent of aggregate financial flows to these countries in 2020 as compared to 54 percent in 2019.

<sup>1</sup> The top-10 borrowers, defined as those with the largest end-2020 external debt stock, are Argentina, Brazil, China, India, Indonesia, Mexico, the Russian Federation, South Africa, Thailand, and Turkey.

### Box O.1 China: The Largest Borrower and Lender among Low- and Middle-Income Countries

#### China—A Recipient of External Financial Flows

Over the past decade almost 60 percent of net aggregate financial flows to low- and middle-income countries from external creditors and investors went to China. Over this period China received inflows close to \$4 trillion, of which 40 percent were debt-creating flows and 60 percent were foreign direct investment and portfolio equity flows. In 2020, aggregate financial flows to China rose 32 percent to \$466 billion, driven by a 62 percent increase in net debt inflows to \$233 billion and a 12 percent rise in net equity inflows also to \$233 billion.

China's external debt stock rose 11 percent in 2020 to \$2.3 trillion, including both domestic and foreign currency-denominated debt, but remained moderate in relation to gross national income at 16 percent. Short-term debt, of which about a third was trade related, accounted for the largest share of China's end-2020 external debt stock, 53 percent at end-2020, down slightly from 57 percent at end-2019. Long-term debt was the fastest-growing component, rising 22 percent in 2020 to \$1.1 trillion. The major contributor was the \$217 billion in bond issuances by public and private entities in the China Interbank Bond Market (CIBM)

**Figure BO.1.1** Aggregate Net Financial Flows to China, 2011–20  
US\$ (billion)

Sources: World Bank Debtor Reporting System, International Monetary Fund, State Administration of Foreign Exchange of the People's Republic of China, and Bank for International Settlements.

purchased by non-residents. This was 65 percent higher than the comparable figure for 2019.

The sharp rise in non-resident investors' expansion in the holdings of Chinese renminbi bonds in 2020 reflects not only the economy's early recovery from the COVID-19 pandemic ahead of other major economies, but also China's concerted efforts to liberalize their

### Box O.1 China: The Largest Borrower and Lender among Low- and Middle-Income Countries (Continued)

financial accounts. Non-resident participation in China's onshore bond market has risen steadily since 2016 when the market was opened to foreign investors. At end-2020, Chinese bonds held by non-residents totaled about \$635 billion and accounted for 58 percent of China's long-term external debt.

Since 2016, Chinese authorities have implemented various programs and measures to improve non-resident access to the CIBM. The introduction of the CIBM Direct Access program removed investment quotas or repatriation restrictions for foreign institutional investors. The Bond Connect program, launched in July 2017, gave investors the option of registering and settling trades onshore, easing investor concerns over repatriation and capital account risk since the assets are held and settled offshore. In 2018, repatriation and holding period restrictions were removed. In June 2020, quota restrictions were abolished, and repatriation of fund procedures simplified, while in November 2020, in response to investor feedback on ease of access, the application process was streamlined. Inclusion of renminbi (RMB) bonds in the Bloomberg Barclays Global Aggregate Index and China-A shares in FTSE Russell emerging market index and automated links between the Shanghai, London, and Hong Kong SAR, China markets also encourage and facilitate foreign investors' appetite for access to RMB bonds.

The CIBM, China's domestic bond market to which non-resident have access, has an estimated market value of \$12 trillion at end-2020, making it the world's second-largest bond market after the United States, or third if the Eurozone markets are counted together as one. It is regulated by the People's Bank of China and supported by the China Central Depository and Clearing Company Limited. The CIBM has four main segments: (1) *central government sovereign bonds* issued in a range of maturities; (2) *local government bonds* issued by provincial-level governments to refinance short-term bank loans into longer-term bonds and mostly held by domestic banks; (3) *policy bank bonds* issued by the three main development banks, China Development Bank, Agricultural Development Bank of China, and the China Exim-Bank; and (4) *corporate bonds* issued by

**Figure BO.1.2 Low- and Middle-Income Countries' Debt to China, 2011–20**  
US\$ (billion)

Source: World Bank Debtor Reporting System.

both public and private entities, but primarily by state-owned enterprises including the four major government-owned banks, Agricultural Bank of China, Bank of China, China Construction Bank, and Industrial and Commercial Bank of China. Policy bank and corporate bonds, which together account for 44 percent of the CIBM market value, both support development of the Chinese economy and finance a significant share of China's overseas lending.

### China—One of Low- and Middle-Income Countries' Largest Creditors

Over the past two decades China has been one of the world's fastest-growing economies with annual gross domestic product growth averaging over 9 percent, a pace the World Bank describes as "the fastest sustained expansion by a major economy in history." This, combined with China's "Going Global Strategy," initiated in 1999 to foster Chinese investment abroad, has propelled Chinese overseas investment and lending. China has become not only low- and middle-income countries' largest borrower, but also one of the largest creditors.

Low- and middle-income countries' combined debt to China was \$170 billion at end-2020,

**Box O.1 China: The Largest Borrower and Lender among Low- and Middle-Income Countries (Continued)**

more than three times the comparable level in 2011. To put this figure in context, low- and middle-income countries' combined obligations to the International Bank for Reconstruction and Development were \$204 billion at end-2020 and to the International Development Association \$177 billion. Most of the debt owed to China relates to large infrastructure projects and operations in the extractive industries. Countries in Sub-Saharan Africa, led by Angola, have seen one of the sharpest rises in Chinese debt although the pace of accumulation has slowed since 2018. The region accounted for 45 percent of end-2020 obligations to China. In South Asia, debt to China has risen, from \$4.7 billion in 2011 to \$36.3 billion in 2020, and China is now the largest bilateral creditor to the Maldives, Pakistan, and Sri Lanka.

**Regarding measurement and country coverage:**

*What is measured:* The debt referred to above is defined as financing that has been disbursed by China, minus any principal payments made by the borrower. It does not include loan commitments and undisbursed amounts that are much larger. *Country coverage:* Debt owed to China by the Russian Federation and República Bolivariana de Venezuela is not included: these data are not reported to the DRS. Russian debt is reported in aggregate forms; China as a creditor is not identified. *Sectoral coverage:* (1) Public and publicly guaranteed debt. This sector included government, public sector entities, and private sector publicly guaranteed debt. Some DRS reporters do not include borrowing by state-owned enterprises not guaranteed by the government in external public debt data. This exclusion in most instances is related to the national legal

framework that governs the coverage, measurement, and monitoring of public debt. The non-reporting of this category lowers the total figures by creditor country breakdown. (2) China lending to private sector not publicly guaranteed or through special purpose vehicles is captured in private non-guaranteed debt. These data are reported to the DRS in aggregate, and creditors cannot be separately identified.

**China extends loans to low- and middle-income countries on concessional and non-concessional terms.** There are four main types of loans. The first type is concessional loans extended by the government of China at very low interest rates or interest-free, funded from tax revenues. These loans are denominated in renminbi and managed by the China International Development Cooperation Agency. The second type is concessional loans from the Export-Import Bank of China (Chexim) managed by the Preferential Loans Department. There are two types of loans: (1) concessional loans denominated in renminbi funded by the government and (2) US-dollar-denominated "preferential buyers" credits financed from Chexim's own resources. The third, and largest type, is non-concessional loans extended by policy banks, Chexim, the China Development Bank, and the Agricultural Development Bank of China. Policy banks fund their operations through bond issuance in the domestic (CIBM) and international capital markets. Loans from policy banks are denominated in US dollars and have market interest rates and medium-term maturities. The fourth type is loans from Chinese commercial banks and suppliers insured by China's official export credit agency, SINOSURE.

## External Debt Stocks in 2020

The combined external debt stocks of low- and middle-income countries rose to \$8.7 trillion at end-2020, driven by an increase in long-term debt. The total external debt stock of low- and middle-income countries rose on average 5.3 percent in 2020 to \$8.7 trillion. The rate of accumulation in 2020 was comparable to that in 2018 and 2019, but below the annual average increase of 8 percent

in external debt stocks from 2011 to 2017. This reflects a much slower accumulation of external private non-guaranteed debt stocks, which averaged 3.3 percent per annum in 2018–2020 compared to 8.6 percent each year from 2011 to 2017. The 2020 increase in external debt stocks resulted from net debt inflows of \$435 billion and valuation changes in year-on-year exchange rates in relation to the U.S. dollar (about half the external debt of low- and middle-income countries is denominated

in currencies other than the U.S. dollar). Long-term external debt rose 7 percent to \$6.5 trillion, equivalent to 75 percent of the total external debt stock, driven by a 10 percent rise in long-term external public and publicly guaranteed debt, including obligations to the IMF, and a much smaller 3 percent increase in long-term non-guaranteed external debt of private sector entities. The short-term debt stock was unchanged at \$2.2 trillion at end-2020.

**China accounted for over a quarter of the end-2020 external debt stock of low- and middle-income countries.** China's external debt stock rose 11 percent in 2020 to \$2.3 trillion, propelled by an 18 percent increase in long-term debt. The long-term external debt stock of China's public sector borrowers increased by 30 percent to \$415 billion at end-2020 while the external debt stock of private Chinese entities, without any government guarantee, rose 18 percent from the end-2019 level to \$688 billion. External short-term debt was \$1.2 trillion at end-2020 and only marginally (2.5 percent) higher than the previous end-year level, reflecting the slowdown in trade volumes induced by the global pandemic. However, short-term debt remained by far the most significant component of China's total external debt stock, 53 percent at end-2020, down slightly from 57 percent at end-2019.

**China aside, the external debt stocks in 2020 were characterized by a marked divergence between major borrowers and other low- and middle-income countries.** The combined external debt stock of low- and middle-income countries, excluding China, rose on average 3.4 percent in 2020 to \$6.3 trillion of which the nine major borrowers accounted for 56 percent. Their combined external debt stock was \$3.5 trillion at end-2020, relatively unchanged from the prior year. In contrast, the external debt stock of other low- and middle-income countries rose, on average, 9.5 percent to \$2.8 trillion. Reasons for the evolution of major borrowers' external debt stocks in 2020 were divergent, but a common factor was contraction in non-resident holdings of domestically issued bonds, including in India, Indonesia, and the Russian Federation. It was also one of the reasons for the 2.5 percent fall in South Africa's long-term public and publicly guaranteed external debt in 2020 in addition to the 19 percent contraction in short-term debt and 21 percent fall in long-term non-guaranteed debt of the private sector. Thailand was the only major borrower to see a significant increase in external debt

stock in 2020, 14 percent, driven by a 25 percent increase in short-term debt and 11 percent rise in the long-term non-guaranteed debt of private sector entities through both bond issuance and borrowing from commercial banks.

**Looking beyond the major borrowers reveals close convergence in external debt stock accumulation at the regional level in 2020.** Viewed from a regional perspective, the external debt stock accumulation of low- and middle-income countries in 2020 appeared divergent, ranging from an average increase of 10 percent for countries in the East Asia and Pacific region to less than 1 percent for countries in the Latin America and the Caribbean region. But top-10 major borrowers dictated these trends: including China they accounted for 68 percent of the end-2020 external debt stocks of low- and middle-income countries. As a result, the picture changes significantly when major borrowers are excluded. For the other 113 low- and middle-income countries included in *International Debt Statistics 2022* aggregates, there was convergence in 2020 in external debt stock accumulation at the regional level. The average rate of external debt stock accumulation remained lowest for countries in Latin America and the Caribbean but averaged 8.4 percent when Argentina, Brazil, and Mexico are excluded. Countries in Sub-Saharan Africa recorded the highest increase in external debt stocks in 2020, on average 10.7 percent. In East Asia and Pacific, Europe and Central Asia, and South Asia, the increase in external debt stock clustered around 9.6 percent, and in the Middle East and North Africa region, it was 8.5 percent.

Several factors drove the 2020 increase in debt stocks at the regional level, but inflows from bondholders and increased support from multi-lateral institutions were the most significant. In the East Asia and Pacific region, the 18 percent rise in the external debt stock of the Philippines was driven by the near doubling of inflows from the Asian Development Bank and IBRD and, to a lesser extent, increased Eurobond issuance. Similarly, concessional support from the Asian Development Bank and IDA and increased inflows from bilateral creditors were the main drivers of the 20 percent increase in Myanmar's external debt stock in 2020. In Europe and Central Asia, the external debt stock of Romania rose 20 percent in line with increased Eurobond issuance and \$4 billion support from the European Union's temporary Support to Mitigate Unemployment Risks in an Emergency (SURE) program. In Latin America and the Caribbean, the 12 percent rise in external debt stock for Colombia and 14 percent for Peru reflected increased support from IBRD, sovereign Eurobond issues, and for Colombia a \$5.2 billion purchase from the IMF. The external debt stock of the two largest borrowers in the Middle East and North Africa region, the Arab Republic of Egypt and Morocco, rose 14 percent and 19 percent, respectively in 2020 driven primarily by sovereign Eurobond issues and for Egypt, a \$2.5 billion purchase from the IMF. In South Asia, the external debt stock of Bangladesh rose 19 percent driven by a 32 percent rise in public sector debt owed to bilateral creditors resulting

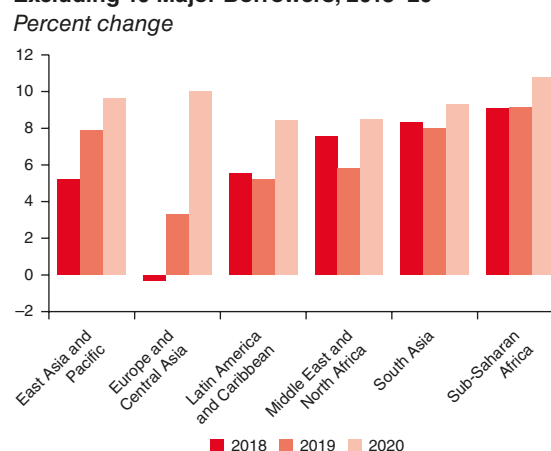

**Figure O.5 External Debt Stocks by Regions, 2018–20**

Sources: World Bank Debtor Reporting System and Bank for International Settlements.

from implementation of large infrastructure projects. For Pakistan, the 8 percent increase in external debt stocks reflected the inflow of budgetary support from official bilateral and multilateral creditors and rollover and new credit lines from commercial banks. In Sub-Saharan Africa, both Ghana and Nigeria recorded a 17 percent increase in external debt stocks driven by purchases from the IMF of \$1 billion and \$3.4 billion, respectively, plus in Ghana, the \$3 billion pre-pandemic Eurobond issue, and for Nigeria, a 16 percent rise in the non-guaranteed debt of the private sector.

## External Debt Flows in 2020

China accounted for over half of net debt inflows to low- and middle-income countries in 2020. Net debt inflows to low- and middle-income countries rose 9 percent in 2020 to \$435 billion with a 13 percent rise in long-term debt inflows offset by a steep contraction in short-term debt inflows. They fell 43 percent to \$16 billion in 2020 from \$28 billion in 2019, paralleling the sharp pandemic-induced slowdown in global trade. The volume and trend of 2020 net debt inflows were also dominated and distorted by the precipitous rise in net debt flows to China. They rose 62 percent in 2020 to \$233 billion, equivalent to 53 percent of net debt inflows to low- and middle-income countries, propelled by a 28 percent increase in long-term debt inflows and change in direction of short-term flows, to an inflow of \$31 billion in 2020 from an outflow of \$14 billion in 2019.

The volume and borrower composition of 2020 debt inflows to low- and middle-income countries looks very different when China is excluded. Debt inflows fell 21 percent in 2020 to \$202 billion, the lowest level since 2016 primarily because of the reversal of short-term debt flows from an inflow of \$41 billion in 2019 to an outflow of \$15 billion in 2020. Long-term debt inflows were \$217 billion in 2020, almost identical to their prior-year level, but the trajectory of long-term debt inflows of public and publicly guaranteed and private non-guaranteed debt was divergent. Net inflows of long-term public and publicly guaranteed debt rose 24 percent to \$210 billion, whereas private non-guaranteed debt inflows dropped to \$7 billion, close to one-sixth the level of comparable inflows in 2019. This was

equivalent to only 4 percent of net long-term inflows in 2020, compared to 22 percent in 2019 and a far cry from 2011 to 2013 when private non-guaranteed debt accounted for well over half of long-term debt inflows.

Bondholders and multilateral institutions were the source of over 95 percent of long-term debt inflows to low- and middle-income countries in 2020, including or excluding China. Net inflows from bondholders rose 10 percent in 2020 to \$280 billion, of which 66 percent were directed to China. Bondholders' share of net long-term debt inflows to low- and middle-income countries in 2020 was 67 percent, virtually unchanged from 2019. The most significant shift in the creditor composition of debt inflows in 2020 was the surge in inflows from multilateral institutions. They more than doubled in 2020 to \$116 billion, raising their share of long-term inflows to 28 percent, from 16 percent in 2019 and offsetting the 80 percent drop in inflows from commercial banks and other private creditors. Inflows from bilateral creditors also rose sharply, 97 percent, in 2020 to \$12.4 billion, but as a share of long-term debt inflows they were small, 3 percent. If China is excluded, then net long-term debt inflows to low- and middle-income countries fall to \$217 billion, of which 98 percent still come from bondholders and multilateral institutions, but the composition changes. The share of inflows from multilateral institutions rises to 53 percent, and bondholders' share falls to 44 percent with bilateral creditors accounting for the remaining 6 percent. Flows from commercial banks and other private creditors were negative with an outflow of \$8.6 billion.

The volume and creditor composition of net long-term debt inflows to public and publicly guaranteed borrowers diverged at the regional level. Countries in Latin America and the Caribbean accounted for the largest share of the \$210 billion in net long-term debt inflows to low- and middle-income countries in 2020, followed by Sub-Saharan Africa and Europe and Central Asia. Inflows to Latin America and the Caribbean were \$79.6 billion, equivalent to 38 percent of total long-term debt inflows and over double the combined inflows to the Sub-Saharan Africa region, \$33 billion, and Europe and Central Asia, \$32 billion, equivalent to 16 percent and 15 percent, respectively, of total inflows. Regarding the composition of inflows, 64 percent of inflows to Latin American and Caribbean countries were from bondholders

**Figure O.7 Net Long-Term External Debt Flows by Borrower Composition, Excluding China, 2011–20**

and other private creditors and 37 percent from multilateral institutions, principally the IMF, the Inter-American Development Bank, and the IBRD. Conversely, 92 percent of inflows to Sub-Saharan Africa were from multilateral institutions and the remaining 10 percent from bilateral creditors. In the South Asia region, official bilateral and multilateral creditors accounted for all inflows in 2020 as flows from private creditors to the region were negative.

Net inflows from official creditors doubled in 2020 to \$129 billion, the highest level for a decade driven by the surge in lending from multilateral institutions. Net inflows from official creditors, bilateral and multilateral combined, accounted

for 30 percent of 2020 net inflows to low- and middle-income countries from all creditors. In 2019, official creditors' share of net inflows was 16 percent. Inflows from bilateral and multilateral creditors both doubled in 2020 to \$129 billion, but multilateral creditors accounted for the lion's share, 90 percent. Total inflows from multilateral creditors were \$116 billion in 2020 up from \$58 billion in 2019. Inflows from the IMF rose to \$47 billion from \$22 billion in 2019. Inflows from the World Bank (IBRD and IDA) rose to \$27 billion in 2020, 42 percent higher than the comparable figure for 2019. Other multilateral institutions, led by the African Development Bank, the Asian Development Bank, and the Inter-American Development Bank, also ramped up lending in 2020 and tripled collective inflows to \$43 billion in 2020 from \$17 billion in 2019.

**Figure O.10 Long-Term Debt Inflows to Public and Publicly Guaranteed Borrowers by Regions, 2020**

**Box 0.2 International Bond Issuance in 2020**

Bond issuance by low- and middle-income countries reached an all-time high in 2020, but China accounted for close to half. Bond issuance in international markets by low- and middle-income countries rose to \$457 billion in 2020, an increase of 14 percent over the comparable figure for 2019 and surpassing the previous 2017 record high of \$400 billion. The driving force was the surge in new issuance by China, which rose 64 percent to \$218 billion, equivalent to 48 percent of the combined bonds issued by low- and middle-income countries in 2020.<sup>1</sup> This increase was primarily because of the sharp expansion of non-resident investors' holdings of Chinese renminbi bonds, but 2020 almost marked the first time China issued US-dollar- and euro-denominated bonds in international markets. Issuance by Chinese entities in 2020 was divided equally between public and private sector entities with the former rising 80 percent from the 2019 level to \$109 billion and the latter by 52 percent, but also totaling \$109 billion.

Bond issuance by low- and middle-income countries, excluding China, fell 11 percent in 2020 to \$239 billion. Most of the downturn was accounted for by countries in *Sub-Saharan Africa*, which fell almost 74 percent in 2020 to \$6.5 billion. Several countries in Sub-Saharan Africa, including Angola, Benin, Côte d'Ivoire, Gabon, Ghana, Kenya, Nigeria, and South Africa, had signaled an intent to tap international markets in 2020, but only Gabon and Ghana managed to issue bonds prior to the pandemic. After the global lockdown in March 2020, the market effectively closed to Sub-Saharan African borrowers, with investor reluctance in regard to the region heightened by the worsening outlook for growth and public finance caused by the pandemic. The JP Morgan Emerging Market Bond Index (EMBI) Global spread for African issuers spiked to more than 1,000 basis points (bp) in late March, from an average of 469 bp in February, rendering new issuance prohibitively expensive, but fell back to about 600 bp by late November 2020.

In other regions outcomes were mixed. The pandemic complicated access to capital markets for most borrowers at the onset of the pandemic, but access gradually improved after the initial stage of the shock, though there were an unusually

high number of credit rating downgrades in 2020, notably in countries rated below investment grade. Downgrades stemmed from worsened macroeconomic outlooks due to the fiscal costs and broader impact of the pandemic.

Bond issuances to countries in *Latin America and the Caribbean* rose in 2020, 16 percent, to \$104 billion, but little changed in terms of share of issuance by public and private sector entities. Mexico's bond issuance by public and private entities was \$43.8 billion in 2020, the same amount as in 2019, and equivalent to 42 percent of the regional issuance in 2020. Peru, one of the countries hardest hit by the pandemic, raised a total of \$7 billion in international capital markets in 2020, compared to \$750 million in 2019. Sovereign issues from Colombia rose 177 percent to \$8.3 billion and doubled in the Dominican Republic to \$8.4 billion. Private sector entities in the region issued \$26.8 billion in 2020, of which 75 percent was issuance by high-yielding corporates in Brazil and Mexico.

In *Europe and Central Asia*, bond issuance fell 8 percent in 2020 with issuance by both public and private sector entities registering a decrease, 7 percent and 12 percent, respectively. The region's three largest issuers, the Russian Federation, Romania, and Turkey, accounted for almost 80 percent of issuance by sovereigns and public sector entities. Issuance by Russia contracted 42 percent due to a drop in non-resident purchases but was largely offset by Romania with significant increases in Eurobond issuance, \$13.3 billion in 2020 from \$5.6 billion in 2019. Several other sovereigns across the region also issued in international capital markets in 2020 including Albania, Belarus, and Ukraine. Issuance by private sector entities in Russia also fell but was partially offset by the \$1.3 billion in issuances by private corporates in Belarus.

The downturn in issuance by countries in the *Middle East and North Africa* region in 2020 reflected the economic and financial crisis in Lebanon, which forced the country into its first Eurobond default in April 2020. The 20 percent fall in issuance by countries in the *East Asia and Pacific* region, excluding China, was largely attributable to Indonesia. It was one of the first countries to come back to the market after the global lockdown, with the \$4.3 billion sovereign Eurobond "pandemic bond" in April 2020. But overall issuance in 2020 fell to \$19.2 billion from

<sup>1</sup> Excluding bonds subject to the Argentina, Belize, and Ecuador bond exchanges.

### Box O.2 International Bond Issuance in 2020 (Continued)

\$26.4 billion in 2019 due to a slowdown in non-resident investors' purchases of bonds issued in the domestic market. The fall in bond issuance by India, the only market participant in the *South Asia* region in 2020, was also due largely to a fall in non-resident investor purchase of domestic bond issues. In contrast issuance by Indian private sector entities rose 35 percent to \$9.7 billion.

Despite the pandemic 2020 saw some innovations in bond issuance and some bond exchanges. Ghana's \$3 billion pre-COVID-19 sovereign Eurobond issue in February 2020 was a landmark as the first Sub-Saharan African country's issue of a 20-year bond (\$750 million—percent tranche) and Ghana's lowest coupon rate to date, 6.375 percent on the \$1.25 billion 6-year tranche. \$523 million was used to buy back part of prior bond issues. Mexico's \$750 million 7-year 1.350 percent Eurobond in September 2021 was the

first sovereign bond linked to the sustainable development objectives of the United Nations. Peru's \$4 billion Eurobond issue in November 2020 to help finance costs of the pandemic included a \$1 billion “century” tranche with a 3.23 percent coupon repayable in 2121. Côte d'Ivoire's €1 billion 12-year Eurobond issue in November 2020 marked the return of a Debt Service Suspension Initiative (DSSI) participant to the market. Other DSSI-eligible countries to issue bonds in international markets in 2020 (Ghana, Honduras, Mongolia, and Uzbekistan) are not participating in DSSI. Argentina and Ecuador successfully completed bond exchanges in 2020. Ecuador's \$17.4 billion exchange had a 98 percent participation rate, extended maturities by an average of 10 years, and substantially reduced coupons. After protracted negotiation, Argentina exchanged about \$65 billion with close to 99 percent participation.

### IDA Borrowers Eligible for the DSSI<sup>2</sup>— External Debt Stocks and Flows

The rapid rise in external borrowing by low-income IDA-eligible countries over the past decade and

increased share of borrowing on non-concessional terms had raised concerns about debt vulnerabilities prior to the onset of the crisis. These vulnerabilities exacerbated sharply in 2020. Half of IDA countries applying the Low-Income Debt Sustainability Analysis (LIC-DSA) in 2020 were assessed as being at high risk of debt distress or in debt distress, compared to 23 percent in 2013.

The Debt Service Suspension Initiative was launched by G-20 countries in April 2020 to assist the poorest and most vulnerable low- and middle-income countries in managing the adverse

<sup>2</sup> Eligibility for the DSSI is reserved to countries eligible to borrow from IDA at the time the initiative was endorsed in April 2020 and countries on the United Nations list of Least Developed Countries. The following IDA borrowers are not eligible for the DSSI: Eritrea, Sudan, the Syrian Arab Republic, and Zimbabwe.

impacts of the COVID-19 pandemic. It offered 73 IDA-eligible and least developed countries a temporary suspension of debt-service payments owed to official bilateral creditors. The suspension period was originally set for payments falling due from May 1 to December 31, 2020, but was subsequently extended to end-December 2021.

The external debt stock of DSSI-eligible countries accumulated at the same rate as China in 2020 and faster than other low- and middle-income countries. The combined external debt stock of DSSI-eligible countries rose on average 12 percent in 2020 to \$860 billion, equivalent on average to 38.8 percent of their combined GNI (measured in nominal terms) and 217.5 percent of export earnings. Long-term public and publicly guaranteed external debt stock, including the use of IMF credit, rose 14 percent in 2020 to \$618 billion. Long-term private non-guaranteed external debt and short-term debt increased 6 percent to \$176 billion and \$65 billion, respectively. The pace at which external debt stocks of DSSI-eligible countries increased in 2020 was comparable to that of China, and end-2020 external debt stocks of DSSI-eligible countries were two and half times higher than the level at the start of the decade.

Debt owed to multilateral creditors increased by 22 percent in 2020 and accounted for almost half of long-term external public debt stocks. The combined long-term external debt stock of public and publicly guaranteed borrowers rose to \$618

billion at end-2020, an increase of 14 percent from the 2019 level and 133 percent higher than the comparable figure in 2011. Debt owed to multilateral creditors, including the IMF, rose 22 percent to \$295 billion, equivalent to almost half of DSSI-eligible countries' 2020 long-term external public and publicly guaranteed debt stocks. Debt owed to bilateral creditors rose 9 percent to \$202 billion, bringing the combined share of debt stocks owed to official creditors to 80 percent. Over the past decade the rise in public and publicly guaranteed external debt of DSSI-eligible countries was accompanied by rapid increase in market-based financing. In 2020, debt owed to private creditors rose 8 percent to \$122 billion, but the share of end-2020 long-term external debt stocks declined to 20 percent from 21 percent in 2019.

There was wide divergence in the rate at which external debt accumulated in individual DSSI-eligible countries, including the group's largest borrowers. The combined external debt stock of the 10 largest DSSI-eligible borrowers (Angola, Bangladesh, Ethiopia, Ghana, Kenya, Mongolia, Nigeria, Pakistan, Uzbekistan, and Zambia) was \$509 billion at end-2020, 12 percent higher than the comparable figure at end-2019 and equivalent to 59 percent of the external debt obligations of all DSSI-eligible countries combined. They also accounted for 65 percent of the end-2020 private non-guaranteed external debt of DSSI-eligible countries. The rate at which debt accumulated in individual countries varied considerably, from

**Figure O.12 External Debt Stock of DSSI-Eligible Countries, 2011–20**  
US\$ (billion)

4 percent in Angola to 19 percent in Bangladesh. Similarly, the public and publicly guaranteed debt for the group as a whole rose 10 percent in 2020 to \$356 billion but for individual countries the increase ranged from less than 2 percent for Guyana to 36 percent for Uzbekistan. Countries with more moderate increases in public and publicly guaranteed debt included Ethiopia and Tanzania, 7 percent and 4 percent, respectively, and at the higher end of the range, Bangladesh 20 percent, Mongolia 17 percent, and Ghana 19 percent.

In 17 DSSI-eligible countries external debt stocks increased by 20 percent or more in 2020. DSSI-eligible countries reported an accelerated debt accumulation in 2020, but the factors that drove the increase in external debt are diverse. The group includes two countries classified as IDA-blend and creditworthy for some IBRD financing (Grenada and Uzbekistan), six that have issued Eurobonds in international capital markets (Benin, Côte d'Ivoire, Grenada, Maldives, Rwanda, and Uzbekistan), and six on the fiscal year 2022 (FY22) classified list of fragile states

**Figure O.15 DSSI-Eligible Countries Where Total External Debt Rose 20 Percent or More from 2019 to 2020**

Sources: World Bank Debtor Reporting System and International Monetary Fund.

(Burkina Faso, Guinea-Bissau, Kosovo, Myanmar, Niger, and the Solomon Islands). Reasons for the increase varied and included IMF purchases and World Bank disbursements (Côte d'Ivoire, Kosovo, Maldives, Nepal, Togo), inflows from private creditors (Guinea, Togo, Uganda), higher short-term debt inflows (Grenada, Malawi, Uzbekistan), and Eurobond issuance (Côte d'Ivoire, Ghana, Mongolia, Uzbekistan).

Multilateral creditors provided 60 percent of net long-term external debt inflows to DSSI-eligible countries. Net long-term debt inflows to DSSI-eligible countries rose 25 percent in 2020 to \$71 billion from \$57 billion in 2019 to the highest level of the past decade. This increase was driven by the extraordinary level of support provided to the world's poorest countries by multilateral institutions led by the IMF and the World Bank. Net inflows from multilateral institutions to DSSI-eligible countries rose 74 percent in 2020 to \$42 billion, equivalent to 60 percent of 2020 net debt inflows of external public and publicly guaranteed debt from all creditors. The IMF and World Bank combined accounted for

**Figure O.16 DSSI-Eligible Countries' Net Long-Term Inflows of Public and Publicly Guaranteed Debt by Creditor Type, 2011–20**

US\$ (billion)

Source: World Bank Debtor Reporting System.

70 percent of the 2020 inflows from multilateral institutions. Inflows from bilateral creditors fell 19 percent to \$10 billion, from \$12.5 billion in 2019. The inflows from bondholders fell to \$4 billion, close to half the 2019 level, and the decrease was due to tightening of market conditions in 2020, which raised borrowing costs and limited market access for most DSSI-eligible countries. Net inflows from other private creditors rose 15 percent in 2020 to \$14 billion but were highly concentrated and also reflected roll-overs and extension of new credits by commercial bank loans to Pakistan in the context of the IMF program.

In 2020, DSSI-eligible countries expended \$45.2 billion to service external public and public guaranteed debt. The combined debt service paid by DSSI-eligible countries in 2020 on external public and publicly guaranteed debt, including the IMF, totaled \$45.2 billion, of which principal accounted for \$31.1 billion and interest for \$14.1 billion. The 2020 debt service comprised \$26.4 billion (58 percent) paid to official bilateral and multilateral creditors and \$18.8 billion (42 percent) to private creditors, that is, bondholders, commercial banks, and other private entities. Payments to the World Bank and the IMF were \$2.9 billion and \$3.9 billion, respectively, and together they accounted for 49 percent of 2020 debt service paid to multilateral creditors, followed by the Asian Development Bank (18 percent), Islamic

Development Bank (8 percent), and African Development Bank (6 percent). Reforms to the IMF Catastrophe Containment and Relief Fund (CCRT) in March 2020 enabled 29 of the world's poorest countries to receive \$488 million in grants to offset 2020 debt-service payments made to the IMF (box O.3).

The DSSI offered 73 IDA-eligible and least developed countries a temporary suspension of debt-service payments owed to official bilateral creditors. As of September 2021, 48 countries were participating in the DSSI. Other eligible countries chose not to participate for various reasons. Countries with market access, like Ghana and Nigeria, had concerns about future access and credit-rating downgrades. For Benin and some small island nations, eligible debt service was negligible or non-existent, and countries like Bangladesh preferred to retain their track record of debt servicing. Under this initiative debt-service payments are deferred and repaid over 4–6 years after a 1-year grace period.

In 2020, DSSI-participating countries paid \$30 billion in debt service on external public and publicly guaranteed debt. Of this, \$10 billion, equivalent to 30 percent of the total paid, was to bilateral creditors. Participating countries reporting to the World Bank DRS recorded \$3.5 billion in debt-service payments due to bilateral creditors in 2020 that had been deferred. This figure includes deferrals agreed with G-20 creditors

**Figure O.18 DSSI-Participating Countries: Debt Service Paid and Deferred in 2020**

US\$ (billion)

Source: World Bank Debtor Reporting System.

and non-G-20 bilateral creditors, notably Kuwait and the United Arab Emirates, participating in the initiative on comparable terms. Debt service deferred in 2020 included \$0.7 billion in deferred

interest payments that have been capitalized and added to debt stocks in line with the common term sheet adopted for the initiative, which defines the standstill in payments as net present value neutral. Many DRS reporters signaled that agreements on deferral had been reached with G-20 creditors, that administrative steps to identify precise amounts deferred were still ongoing, and that data reported were preliminary estimates.

With reference to the amount of debt deferred, countries like Kenya did not request participation in the initiative until 2021 and paid all 2020 debt service due to bilateral creditors. Australia and Papua New Guinea agreed on a refinancing operation instead of a deferral, and the estimated \$357 million deferral, by Paris Club creditors for the Republic of Yemen is not included. The Republic of Yemen, a country in conflict, did not report to the DRS in 2020.

### Box O.3 The IMF Catastrophe and Containment Relief Trust

The International Monetary Fund (IMF) Catastrophe Containment and Relief Trust (CCRT) was created in February 2015, through a transformation of the Post-Catastrophe Debt Relief Trust, to broaden the range of situations covered by IMF disaster assistance to include fast-spreading epidemics. In March 2020, reforms were adopted that enabled the Fund to provide immediate debt-service relief for its poorest and most vulnerable members affected by the COVID-19 pandemic and any future pandemics.

The CCRT provides grants to eligible countries to pay debt service owed to the IMF and free up resources to meet exceptional balance of payments needs created by the disaster. Eligibility for assistance through the CCRT is reserved for countries eligible for concessional borrowing from the IMF Poverty Reduction and Growth Trust and whose per capita income is below the International Development Association's (IDA) operational cutoff (US\$1,405 for FY22) or, for small states with a population of less than 1.5 million, per capita income below twice the IDA cutoff (US\$2,810 for FY22). Currently 29 countries qualify for assistance from the CCRT.

The IMF Executive Board has approved three grant tranches from the CCRT totaling Special Drawing Rights (SDRs) 520 million (US\$727 million) covering debt-service payments by eligible countries falling due from April 14, 2020, to October 15, 2021. The CCRT is financed by contributions from bilateral donors including middle-income countries, notably Bulgaria, China, Mexico, and the Philippines.

The data presented in *International Debt Statistics 2022* do not reflect CCRT grants. CCRT assistance to eligible countries *offsets* the cost of debt service falling due during the prescribed period but does not *reduce* debt-service payments to the IMF, which remain due in full on the original due dates. Consistent with this, the data presented in *International Debt Statistics 2022* show total debt service paid to the IMF in 2020. To assist users, Table BO.3.1 separates out debt service paid to the IMF by CCRT-eligible countries in 2020 that was offset by a debt relief grant from the CCRT. Aid statistics such as those compiled by the Organisation for Economic Co-operation and Development will capture both the debt-service payment and the debt relief grant.

*Source:* International Monetary Fund.**Debt Indicators 2011–2020**

External borrowing to counter the impact of the global pandemic led to a worsening of debt indicators for low- and middle-income countries in 2020. The ratio of external debt to GNI averaged 29 percent at end-2020 compared to an average of 27 percent in 2019. This was the result of a 5.7 percent increase in external stocks and a 3.7 percent fall in GNI. Similarly, an 8.6 percent fall in export earnings raised the ratio of external

debt to exports to an average of 123 percent in 2020 from 106 percent in 2019. Moreover, these ratios include China, which accounted for 49 percent of the combined GNI of low- and middle-income countries in 2020 and 42 percent of exports. And China's external debt is low relative to both GNI, 16 percent, and to exports, 79 percent, at end-2020. For low- and middle-income countries, excluding China, the ratio of external debt to GNI rose to an average of 42 percent in 2020, a 4.9 percentage point increase from 2019,

and the external debt-to-exports ratio rose to 154 percent, from 126 percent at end-2019. The GNI of low- and middle-income countries, excluding China, fell on average 9 percent in 2020, and exports declined by 15 percent.

**All regions were impacted by the worsening of debt indicators in 2020.** External debt ratios have deteriorated over the past decade, but this trend was exacerbated by the global pandemic when the pace of external debt accumulation outstripped growth in most low- and middle-income countries. Many also experienced a sharp fall in export earnings. This impact has been felt by both the poorer IDA countries and middle-income market-based borrowers as the rise in debt-to-GNI and debt-to-export ratios in all regions clearly shows. Countries in Sub-Saharan Africa have seen the most pronounced deterioration in debt indicators: the ratio of debt to GNI rose from an average of 23.4 percent in 2011 to 43.7 percent in 2020, and the average debt-to-export ratio tripled over the same period to 212.3 percent in 2020.

As the regional figures show, the ratio of external debt stocks to GNI for borrower countries has risen sharply in the past decade in many low- and middle-income countries. In 2011, 50 percent of all low- and middle-income countries had an external debt-to-GNI ratio at or below 30 percent. By 2020, the picture was very different. The percentage of low- and middle-income countries where the external debt-to-GNI ratio was below 30 percent had fallen to 19 percent. Over the same period the percentage of countries where the debt-to-GNI ratio surpassed 100 percent tripled from 4 percent to 14 percent. Within these parameters, country-specific indicators vary, but in 2020, there

**Figure O.19 Countries with 2020 Debt-to-GNI Ratios of 100 Percent or Above**  
Percent

Sources: World Bank Debtor Reporting System and International Monetary Fund.

were 16 countries (including 2 countries that benefited from Heavily Indebted Poor Countries [HIPC] and Multilateral Debt Relief Initiative [MDRI] debt relief, Mozambique and Zambia) that had a debt-to-GNI ratio above 100 percent.

The ratio of external debt stock to export earnings also increased sharply. At end-2011, 42 percent of low- and middle-income countries had an external debt-to-export ratio at or below 100 percent, as compared to only 15 percent of countries with the comparable ratio in 2020. By 2020, the debt-to-export ratio exceeded 250 percent in 37 percent of countries, a sevenfold

Number of countries

Sources: World Bank Debtor Reporting System and International Monetary Fund.

increase from 2011 when only 5 percent of countries had a ratio that exceeded 250 percent.

For DSSI-eligible countries the increase in external debt stocks in relation to both GNI and exports over the past decade was pronounced. In 2011, 38 DSSI-eligible countries had an external debt-to-GNI ratio at or below 30 percent and in 58 countries it was at or below 60 percent. By 2020, the debt-to-GNI ratio was below 30 percent in only 15 DSSI-eligible countries and at or below 60 percent in 44. Over the same period number of

**Figure O.22** Distribution of DSSI-Eligible Countries by External Debt-to-GNI Ratio, 2011 and 2020

Number of countries

Sources: World Bank Debtor Reporting System and International Monetary Fund.

DSSI-eligible countries with a debt-to-GNI ratio that exceeded 100 percent rose from 1 in 2011 to 7 by 2020.

It was a similar picture for external debt in relation to exports. In 2011, 44 DSSI-eligible countries had an external debt-to-export ratio at or below 150 percent. In contrast only 9 DSSI-eligible countries had a comparable ratio at end-2020. Over the same period the number of DSSI-eligible countries with a debt-to-export ratio above 250 percent quadrupled from 4 in 2011 to 21 in 2020.

### Box O.4 The Use of the Ratios Debt-to-GDP versus Debt-to-GNI

Gross domestic product (GDP) and gross national income (GNI) measure a country's economic activity, but what they measure differs slightly. For most countries the difference between GDP and GNI is minimal. GDP counts only income received from domestic sources, whereas GNI also includes net primary income received from abroad. GDP is linked to the concept of production, in which value added is generated, while GNI is a concept of income. The difference between the GNI and GDP is equal to the difference of primary income receivable from nonresidents and primary income payable to nonresidents, often described as "net income from abroad."

The World Bank favors the use of GNI for operational purposes. Member countries' relative poverty is measured in relation to GNI per capita, and this measure underpins the

annual income classification published by the World Bank: the International Development Association operational cutoff (\$1,205 per capita for FY22) and the International Bank for Reconstruction and Development and International Development Association lending terms (interest rate and maturity) for specified borrowers. *International Debt Statistics* follows this convention and provides users with GNI data for each reporting country and the relevant external debt stock and debt service to GNI ratios. The IMF uses the concept of GDP in Article IV consultation reports and Fund programs to measure macroeconomic outcomes. The practice is carried forward to the joint Bank-Fund Debt Sustainability Analysis (DSA), and debt stocks and debt service are measured in relation to GDP.

## Equity Flows in 2020

Equity flows in 2020 fell to the lowest level in a decade with both FDI and portfolio equity flows disrupted by the impact of the global pandemic. Net equity inflows to low- and middle-income countries fell 15 percent in 2020 to \$473 billion with FDI inflows falling 14 percent to \$434 billion and portfolio equity inflows declining by 19 percent to \$39 billion. This was equity inflows' lowest level in a decade, with 2020 inflows 17 percent below the average annual net inflow in 2011–2019 of \$571 billion. Net equity inflows are an important element of aggregate financial flows to low- and middle-income countries and have typically accounted for over half of annual aggregate flows (debt and equity combined) and a much higher share in years when debt flows fell sharply or, as in 2015, were negative. Despite the downturn in 2020, equity flows accounted for 52 percent of the combined debt and equity inflows to low- and middle-income countries. Most equity flows are composed of FDI, on average 91 percent per annum since 2011, and only a handful of low- and middle-income countries benefit from portfolio equity flows to any significant degree.

The COVID-19 pandemic had a significant impact on FDI flows in 2020. Lockdowns around the world slowed existing investment projects, and the prospects of a global recession deterred investors and led multinational entities to reassess the viability of new projects. The fall was heavily skewed towards developed economies, but the downturn was global. FDI inflows to low- and middle-income countries combined fell, on average, 14 percent in 2020 to \$434 billion, the lowest level in a decade.

**Figure O.24 Net Equity Inflows to Low- and Middle-Income Countries, 2011–20**

Sources: International Monetary Fund and United Nations Conference on Trade and Development.

In 2020 China and India accounted for more than half of all FDI inflows to low- and middle-income countries. Inflows to China, the world's second-largest FDI recipient after the United States, rose 5 percent in 2020 to \$170 billion, raising its share of the combined FDI inflows to low- and middle-income countries to 39 percent, its highest level since 2015. In India, the second-largest FDI recipient among low- and middle-income countries, FDI inflows increased 38 percent to \$60 billion, reflecting further relaxation of barriers to foreign investment. Together China and India accounted for 53 percent of FDI inflows to low- and middle-income countries in 2020. In contrast, FDI inflows to other major recipients, Brazil and Russia, fell 36 percent and 56 percent, respectively, from the 2019 level to a combined total of \$53 billion. Low- and middle-income countries other than the four largest recipients saw FDI inflows fall on average 27 percent in 2020 to \$152 billion with most countries recording a drop in inflows compared to the prior year levels.

**The fall in FDI inflows in 2020 at the regional level was uneven.** Two regions, South Asia and Sub-Saharan Africa, reported an increase in FDI inflows, 32 percent and 20 percent, respectively, in 2020. In contrast, FDI inflows to countries in Europe and Central Asia fell on average 42 percent to \$42.4 billion, the lowest level in two decades. Inflows to countries in Latin America and the Caribbean continued a downward trajectory, falling by one-third from the 2019 level to \$84.5 billion with a decline in inflows to all large FDI recipients. In East Asia and Pacific, inflows fell a moderate 4.4 percent, but this reflected a rise in inflows to China. Inflows to other countries in the

region fell, on average, 32 percent. In the Middle East and North Africa region, FDI inflows fell on average 16 percent to \$14.3 billion, and again the downturn impacted most countries in the region.

FDI inflows to the **East Asia and Pacific region** fell on average 4.4 percent in 2020 to \$206 billion, but this was driven by a rise in inflow to China that accounted for 83 percent of FDI inflows to the region in 2020. Inflows to other countries in the region fell, on average, 32.5 percent in 2020 to \$36 billion. FDI inflows to **China** increased 5 percent in 2020 to \$170 billion. This reflected containment of the pandemic and economic recovery in the second quarter of 2020 and removal of investment barriers. The government expanded the number of industries open to FDI, lifted foreign exchange restrictions in major industries, and widened the options for foreign investment in pilot free trade zones. More than 70 percent of FDI inflows in 2020 were directed at the services sector, notably technology-related industries. Growth in mergers and acquisitions in information and communication technology and pharmaceutical industries also contributed to the increase in FDI. In **Indonesia**, FDI declined by 23 percent, to \$19.3 billion, because of a steep fall in investment in manufacturing, and in **Thailand** FDI flows were negative, -\$5.6 billion, driven by disinvestment of Tesco (United Kingdom) to a Thai investor group for \$10 billion. Among the smaller economies, FDI inflows to the **Lao People's Democratic Republic** rose 28 percent in 2020 to \$968 million, because of booming infrastructure investment in projects like the \$2.1 billion Sanakham Dam and \$5.7 billion Laos-China Railway by Asian, largely Chinese, investors. FDI inflows to **Cambodia** were \$3.6 billion, unchanged from 2019. The pandemic slowed investment in the export-oriented garment industry and hospitality sector, but construction projects by Chinese companies, like the 190-km Phnom Penh-Sihanoukville Expressway, remained on schedule. In **Myanmar**, inflows fell 11 percent to \$1.8 billion in 2020 due to worsening investor perceptions, a deteriorating business environment, and the impact of the pandemic.

FDI inflows to countries in **Europe and Central Asia** fell, on average, 42 percent in 2020 to \$42.4 billion, the lowest level in two decades, and only three countries in the region (Belarus, Bulgaria, and Kosovo) recorded an increase in FDI inflows in 2020. In **Russia**, the region's largest

**Figure O.25 FDI to BRIC and Other Select Low- and Middle-Income Countries, 2011–20**

Sources: International Monetary Fund and United Nations Conference on Trade and Development.

FDI recipient, net FDI inflows fell 56 percent to \$12.6 billion. The introduction of new policies that aimed at diversifying FDI flows were derailed by the pandemic, and investment into high-tech industries also fell sharply. However, despite the downturn in commodity prices, investments into the oil and gas sector held up, accounting for 25 percent of 2020 inflows. Inflows to **Turkey**, the region's second-largest FDI recipient, fell 17 percent to \$8.7 billion in 2020, and the downturn would have been steeper, but a rebound in inflows in the second half of the year prevented a steep decline. Major deals included a \$200 million investment by Metric Capita (France) in a pharmaceuticals manufacturing unit and Qatar Investment Authority's acquisition of a 10 percent equity stake in a stock exchange operator also valued at \$200 million. FDI flows to **Ukraine** plunged 94 percent to \$272 million from \$4.9 billion in 2019 due to the combined effect of the pandemic, macroeconomic issues and geopolitical tensions, and reduction in reinvested earnings because of uncertainties in the business environment. Inflows to **Belarus** rose 20 percent, to \$1.3 billion, in part because the country was very late to adopt anti-pandemic restrictions and large inflows were registered in the first part of the year were in various sectors including the automotive industry (Poland), information technology (United States), furniture manufacture (Germany), logistics (China), and renewable energy (Lithuania). FDI inflows ground to a halt in the second half of the year, with investors deterred by the social unrest following the presidential elections in August 2020.

Countries in the **Latin America and Caribbean region** saw FDI inflows drop by more than one-third in 2020 to \$84.5 billion. The severe impact of the pandemic across the region, a sharp fall in export demand, lower prices for commodity exports, and the curtailment of tourism weighed heavily on investment flows to the region. FDI inflows to **Brazil** fell 36 percent in 2020 to \$40.5 billion, the lowest level since 2013, despite some sizeable gains from privatization, including the sale by Petrobras of two crude petroleum and natural gas producers to Australian and British investors. In **Peru**, the combination of prolonged lockdowns, economic contraction, and political instability contributed to a 28 percent fall in FDI in 2020 to \$4.3 billion from \$6 billion in 2019. Large-scale social protests and the downgrade

of the country's investment rating weighed heavily on FDI inflows to **Colombia**, which dropped 53 percent to \$5.6 billion in 2020 from \$11.9 billion in 2019. Investment fell across all sectors but fell the most in oil-related industries. Inflows to **Mexico** fell 27 percent in 2020 to \$22.7 billion with about 60 percent of these inflows accounted for by reinvested earnings. New investments were dampened by uncertainties over the authorities' economic agenda and stance on the role of the private sector in key industries. FDI inflows to **Argentina** continued the downward trajectory that began in 2018, falling 42 percent in 2020 to \$3.8 billion. The challenging economic environment and prolonged shutdown in the industrial sector had an adverse impact on FDI, with new investment falling 45 percent, reinvested earnings falling 22 percent, and disinvestment by several international companies including Walmart USA, Schlumberger USA, and Danone France who sold their assets to domestic investors. FDI flows to **Panama** turned negative, with outflows of \$890 million in 2020 from inflows of \$2.4 billion in 2019 despite measures by the government to counter the economic impact of the pandemic. These included the launch of several infrastructure projects and approval of a new investment incentives regime, mainly in the form of tax benefits, targeting multinational companies that carry out operations from Panama and provide manufacturing services.

In the **Middle East and North Africa**, FDI inflows contracted 16 percent in 2020 to \$14.3 billion from \$16.9 billion in 2019, reflecting a general slowdown in investment across the region. Inflows to **Egypt**, the region's largest recipient, fell 35 percent to \$5.9 billion in 2020 despite concerted efforts to promote diversification of FDI, including the agreement to activate a \$16 billion Saudi-Egypt investment fund across multiple sectors. Most FDI inflows to Egypt are currently in the oil and gas sector. Inflows to **Tunisia** were down 26 percent from the 2019 level, to \$600 million, on account of a steep fall in investments in the service sectors with tourism particularly hard hit. It was a similar story in **Jordan**, where FDI is concentrated in the tourism sector and inflows fell 13 percent in 2020 to \$718 million. Inflows to **Algeria** declined 21 percent to \$1.1 billion despite the authorities' efforts to diversify FDI by lifting restrictions and the 49 percent cap on foreign

ownership. However, these measures should have a positive impact once post-COVID-19 FDI recovers more broadly. **Morocco** was a bright spot, with FDI inflows rising 9 percent in 2020 to \$1.5 billion. The country benefited from the established presence of multinational companies in the automotive, aerospace, and textile industries and investment into phosphates, of which it holds the world's largest known reserves. These factors mitigated the impact of the pandemic.

FDI inflows to countries in **South Asia** rose 32 percent in 2020 to \$63 billion driven by a surge in FDI inflows to India, which the acute impact of the pandemic there did little to deter. Inflows continued their upward trajectory, rising a further 38 percent to \$59.5 billion. The rise in inflows reflected further relaxation of investment barriers, including in the retail and financial sector that began in mid-2019. Inflows in 2020 were also bolstered by \$27 billion in mergers and acquisitions, including megadeals like the \$5.7 billion acquisition of Jio Platforms by Jaadhu, a subsidiary of Facebook USA, and the \$4.6 billion Unilever India merger with GlaxoSmithKline Consumer Healthcare, a subsidiary of GSK United Kingdom. All other countries in the region registered a decline in net FDI inflows of, on average, 25.3 percent from the 2019 level. FDI inflows to **Pakistan** fell moderately

to \$1.9 billion, 5 percent below the 2019 level, cushioned by continued investment in power generation and the telecom sector from British and Chinese investors. In contrast **Bangladesh**, where FDI is concentrated in export-oriented garment manufacturing, inflows fell 21.4 percent in 2020 to \$1 billion as \$3 billion worth of export orders, largely from the United States and European Union, were canceled. In the **Maldives**, where FDI is concentrated in tourism and several new hotel complex projects were postponed, the contraction in inflows was severe. They fell 63.6 percent in 2020 to \$348 million from \$956 million in 2019.

**Sub-Saharan Africa** was the only other region to record an increase in FDI inflows in 2020. They rose on average 20 percent to \$24.3 billion, with many countries recording a rise in inflows in 2020. FDI inflows to **Senegal** rose 39 percent to \$1.5 billion due to increased investments in the energy sector and start-up of work on the largest offshore oil and gas project, the SNE Oil Field, being developed by a consortium of Australian and British companies and Petrosen (Senegal). Inflows to the **Republic of the Congo** rose 19 percent to \$4.0 billion, propelled by investment in offshore oil fields after a licensing round of available oil blocks in 2019, and in the **Democratic Republic of the Congo** they increased 11 percent to \$1.6 billion due to rising demand and increased prices for cobalt used in smartphones and electric car batteries. In **Nigeria**, long-term policies aimed at FDI diversification took effect and inflows rose 9 percent to \$930 million from several new investments in the non-oil sector, including a food manufacturing facility in the Lekke Free

Trade Zone and development of the Lekke Deep Sea Port by Chinese investors. Inflows to **Togo** jumped 72.3 percent to \$639 million largely on account of investment from neighboring countries including \$100 million from CimMetal (Burkina Faso) for a construction material plant and \$60 million cement plant constructed by Dangote (Nigeria). In **Angola**, a slowdown in repatriation of capital by multinational companies in the oil and gas industry reduced outflows to –\$2.0 billion from –\$4.7 billion in 2019. In contrast some of the region's large FDI recipients saw inflows fall in 2020. In **Ethiopia**, the largest recipient in Eastern Africa, inflows fell moderately, 6 percent, with continued investment into key sectors like agriculture and manufacturing that offset much of the decline in hospitality and aviation. The government also facilitated FDI for the manufacture of personal protective equipment, and several Chinese companies started production in 2020. In contrast **Ghana**, one of the largest FDI recipients in West Africa and the first country on the continent to impose mobility restrictions, registered a 52 percent decline in FDI inflows in 2020. They fell to \$2.0 billion from \$3.9 billion in 2019 with manufacturing, services, and the mining sector all recording a downturn.

In common with FDI, portfolio equity inflows to low- and middle-income countries in 2020 centered on China and India. Portfolio equity inflows to low- and middle- income countries fell 19 percent in 2020 to \$39 billion from \$48 billion in 2019. The total figures mask the sharp divergence in the direction of portfolio equity flows in 2020 at the country level. In 2020, there was significant portfolio equity investment in China and India. Inflows to

China rose 39 percent to \$63 billion, and those to India increased by 81 percent to \$25 billion from \$14 billion in 2019. In contrast, other low- and middle-income countries registered combined portfolio equity outflows of \$49 billion in 2020. The factors that attracted portfolio equity inflows to China paralleled those that propelled FDI inflows and non-resident investors' purchase of renminbi-denominated bonds, as outlined in box O.1. In India, government initiatives to attract FDI and portfolio equity investors by hosting investor conferences and structural changes to ease business and investment measures have been key factors behind the rise in portfolio equity inflows. They were also boosted by a better-than-expected economic recovery in the second half of 2020 and strong corporate earnings. In addition, the prospects of higher returns fueled a significant shift by non-resident investors from debt to equities in 2020.

## Supporting Debt Transparency

Comprehensive, transparent public debt data are fundamental to assessing debt sustainability and effective use of borrowed resources. These data are essential for policy makers to make informed borrowing choices, creditors to appropriately price for sovereign risk, and citizens to hold their governments accountable. Yet, despite some improvements, public debt statistics in many low- and middle-income countries still suffer from important gaps in coverage and inadequate levels of transparency. The Debt Management Performance Assessment (DeMPA) conducted by the World Bank for 100 low- and middle-income countries found debt management capacity met the minimum standard for sound debt management in less than half of the dimensions assessed, including debt monitoring and reporting.<sup>3</sup>

Heightened debt vulnerabilities in low- and middle-income countries have been exacerbated by the COVID-19 pandemic. IDA countries have been particularly hard hit, with more than half now in debt distress or at high risk of it. This reflects increased public borrowing in recent years against the backdrop of a changing creditor landscape and multiplicity of non-traditional bilateral

**Figure O.28 Portfolio Equity Flows to Major Recipients, 2018–20**  
US\$ (billion)

<sup>3</sup> IMF-World Bank G-20 Note on Strengthening Public Debt Transparency, June 2018.

and private creditors and, for some countries, a sharp rise in borrowing in domestic markets. A proliferation of new and complex debt instruments and increased share of non-concessional financing in public debt portfolios has also complicated public debt management processes.

**The debt-rescheduling efforts in 2020 and the need for an accurate measure of the impact of and gains from the G-20 DSSI highlighted the importance of debt transparency.** Countries that benefit from DSSI are required to use fiscal space created for expenditures related to crisis response, to disclose all public sector debt, and to refrain from contracting new non-concessional debt during the suspension period, other than agreements in the context of DSSI, or in compliance with limits agreed under the IMF Debt Limit Policy or World Bank Sustainable Development Finance Policy.

**The World Bank continues to take the lead in disseminating data on DSSI outcomes.** *International Debt Statistics 2021* released for the first time a highly disaggregated dataset that provided, for each DSSI participant country, the breakdown of projected debt-service payments to each bilateral creditor and multilateral entity. **One important and ongoing element of the World Bank's focus on debt transparency is to accurately assess DSSI outcomes and the terms and conditions of other bilateral debt-restructuring arrangements.** These data are the essential underpinning of the Bank's multi-pronged program of support for borrowers, which includes not only unprecedented levels of emergency financing, but also implementation of new policies to incentivize sustainable development financing and increased focus on DSAs.

**This year, the International Debt Statistics 2022 database further enhances debt transparency by introducing two new datasets.** The borrower-creditor matrix is expanded to separately identify the Central Bank in the breakdown of the borrower types. Regarding the creditor breakdown, the average terms of new debt commitments (maturity, interest rate, grace period, and grant element) and the currency composition of debt stock by creditor type and creditor country have been added to the database. This new, disaggregated dataset allows analyses for each borrower-creditor pair, for regions, and for select subgroups. This database sets a new standard for

greater debt transparency. It enriches the ways in which external debt data can support analyses and policy making. It confirms the rising importance of the information that allows for the comparison of lending terms extended by bilateral individual creditors, including new bilateral creditors, and by commercial lenders. The data are drawn from the World Bank DRS to which World Bank borrowers (IBRD and IDA) report annually, loan by loan, on stocks and flows for long-term external debt owed by public agencies or private agencies with public guarantees; in aggregate, on long-term external debt owed by the private sector with no public guarantees; and quarterly, loan by loan, on the terms and conditions of new public and publicly guaranteed loan commitments.

**The DRS definition of external public debt is holistic.** It encompasses all borrowing by (1) central government, state and local government, and municipalities; (2) Central Bank or monetary authority; and (3) public sector entities, irrespective of whether the obligation benefits from a state guarantee. Efforts over time have already closed large gaps in the data on public sector external debt and improved the coverage of borrowing by state-owned enterprises (SOEs). For the 123 countries reporting to the World Bank DRS and for which data are presented in *International Debt Statistics 2022*, 33 percent have full coverage of public sector debt, including the debt of SOEs.

**Figure O.29 DRS Reporting Countries—Coverage of Public and Publicly Guaranteed Debt**  
Number of countries

Source: World Bank Debtor Reporting System.

The DRS has a long-standing record for flexibility and capacity to meet new data needs as they arise to support the Bank's institutional requirements and those of the broader international community. Throughout its 60 plus years in operation, the DRS has continuously evolved in response to new data needs. The DRS has adapted to changing borrowing patterns; new and complex lending instruments; and demands for additional, highly detailed debt data, when periodic debt crises erupt, to both support restructuring processes and measure outcomes.

The DRS ongoing agenda prioritizes transparency and closing public sector data and knowledge gaps. Areas of emphasis are (1) an accurate and comprehensive measure of the external obligations of SOEs in all DRS reporting countries; (2) a determination of the extent to which public sector borrowers in low- and middle-income countries have given external creditors collateral or other risk mitigation commitments; and (3) incorporating Central Bank deposits and currency swaps lines

into the DRS dataset. Furthering transparency on the external borrowing practices of SOEs is, in many respects, an essential first step in assessing the extent of loan collaterals. SOEs, particularly those in the extractive industries, are likely to account for a large share of collateralized loans. Similarly, a comprehensive measure of Central Bank deposits and foreign currency swap lines, and how they are used in support of public debt management in low- and middle-income countries, will be an important addition to debt data transparency and will help avert "debt surprises." A small number of countries already include information on foreign currency swap lines when reporting to the DRS. However, a preliminary survey of Central Banks in G-20 countries indicates that by mid-2021, a third of low- and middle-income countries had entered into currency swap agreements. Many of these arrangements appear to be precautionary, but a clearer understanding of them would be another important step in debt transparency.

# APPENDIX

## About the Data

---

# User Guide to Tables

*International Debt Statistics 2022* focuses on financial flows, trends in external debt, and other major financial indicators for low- and middle-income countries. This edition of *International Debt Statistics* (IDS) has been reconfigured to offer a more condensed presentation of the principal indicators. The longer version of the report will be found in the online tables.

## Tables

### *Aggregate Tables*

The aggregate tables are labeled by region name. Data are shown for all low- and middle-income countries and six regional groups (East Asia and Pacific, Europe and Central Asia, Latin America and the Caribbean, Middle East and North Africa, South Asia, and Sub-Saharan Africa).

### *Country Tables*

Country tables are labeled by country name and ordered alphabetically. Data are shown for 123 low- and middle-income countries that report public and publicly guaranteed external debt to the World Bank's Debtor Reporting System (DRS). The tables also include key debt ratios and the composition of external debt stocks and flows for each country.

Each table shows a time series with the most recent five years, as well as 2010 as a comparison year. Full time series data are available for all countries in the World Bank's Open Data website (<https://datacatalog.worldbank.org/dataset/international-debt-statistics>).

## Statistics

The general cutoff date for countries to report data for this publication was end-August 2021. The economic aggregates presented in the tables are prepared for the convenience of users. Although debt ratios can give useful information about developments in a debt-servicing capacity, conclusions drawn from them will not be valid unless accompanied by careful economic evaluation.

The macroeconomic data provided are collected from national statistical organizations, which in some cases may be subject to a considerable margin of error. The usual care must be taken in interpreting the ratios, particularly for the most recent years, because figures may be preliminary and subject to revision.

Specific country notes describing the sources of information that are not provided by the country are summarized in the "Data Documentation" section. Unless otherwise specified, data on long-term public and publicly guaranteed external debt for 2020 are based on reports provided by the country.

More detailed information on data sources, methodology, and compilation is provided in the appendix at the back of this book.

## Aggregate Measures for Income Groups and Regions

Aggregate measures for income groups and regions include the 123 low- and middle-income countries that report public and publicly guaranteed external debt to the World Bank's DRS, whenever data are available. The aggregate "All low- and middle-income countries" is the sum of data for 123 countries.

### Classification of Countries

For operational and analytical purposes, the World Bank's main criterion for classifying countries is gross national income (GNI) per capita (calculated by the *World Bank Atlas* method). Every country is classified as low-income, middle-income, or high-income. Low- and middle-income countries are sometimes referred to as developing countries. The term is used for convenience; it is not intended to imply that all countries in the group are experiencing similar development or that other countries have reached a preferred or final stage of development. Because GNI per capita changes over time, the country composition of income groups may change from one edition of *International Debt Statistics* to the next. Once

the classification is fixed for an edition, based on GNI per capita in the most recent year for which data are available, all historical data presented are based on the same country grouping.

### Symbols

0 or 0.0 means zero or small enough that the number would round to zero at the displayed number of decimal places.

.. means that data are not available or that aggregates cannot be calculated because of missing data in the years shown.

\$ indicates current U.S. dollars unless otherwise specified.

---

# User Guide to IDS Online Tables and Database

The country tables that were previously available in the *International Debt Statistics* print edition is now available online. Using an automated query process, these reference tables will be updated based on the revisions to the International Debt Statistics database.

Users can access all the online tables, download the PDF version of the publication, and view the report as an eBook on ISSUU, as well as access the database and download the archived editions of the publication by going to <http://data.worldbank.org/products/ids>. You can also access all of the publications through the Debt Website at <https://www.worldbank.org/en/programs/debt-statistics/publications>.

## How to Access IDS Online Country Tables

To access the IDS online tables, visit <https://www.worldbank.org/en/programs/debt-statistics/ids> and select from “Country,” “Region,” or “Topic.” Click on “Analytical” to view the table with a select number of indicators as reported in the IDS publication, or “Standard” to view the tables with the full list of indicators available in the database. To access the DSSI debt service payments due table, visit <https://www.worldbank.org/en/programs/debt-statistics/dssi> and select “Monthly presentation” for monthly projections or “Annual presentation” for yearly projections.

### IDS Data Tables:

COUNTRY	REGION	TOPIC
---------	--------	-------

ANALYTICAL	STANDARD
------------	----------

Data are shown for developing countries that report public and publicly guaranteed external debt to the World Bank's Debtor Reporting System (DRS). The tables also include key debt ratios and the composition of external debt stocks and flows for each country.

These analytical tables show a select number of indicators as reported in the IDS publication.

Afghanistan	Albania	Algeria	Angola
Argentina	Armenia	Azerbaijan	Bangladesh
Belarus	Belize	Benin	Bhutan
Bolivia	Bosnia and Herzegovina	Botswana	Brazil
Bulgaria	Burkina Faso	Burundi	Cambodia
Cameroon	Cabo Verde	Central African Republic	Chad
China	Colombia	Comoros	Congo, Dem. Rep.
Congo, Rep.	Costa Rica	Cote d'Ivoire	Djibouti
Dominica	Dominican Republic	Ecuador	Egypt, Arab Rep.

To access a specific country table directly without going through the above landing page, use the URL <https://www.worldbank.org/en/programs/debt-statistics/ids> and click on a country name to view the table. Similarly, to view the regional table, click on the “Region” tab and select one of the listed regions. The data can be filtered by Counterpart-Area (the creditor) and by Country (the debtor) using the drop-down filters.

## How to Access the Database

DataBank (<http://databank.worldbank.org>) is an online web resource that provides simple and quick access to collections of time series data. It has advanced functions for selecting and displaying data, performing customized queries, downloading data, and creating charts and maps. Users can create dynamic, custom reports based on their selection of countries, indicators, and years. All these reports can be easily edited, shared, and embedded as widgets on websites or blogs. For more information, see <http://databank.worldbank.org/help>.

## Actions

Click to share the table using either the embed code or the URL

Click to edit and revise the table in DataBank

Click to export all metadata to Excel

Click to export the table to Excel

Click to export the table and corresponding indicator metadata to PDF

Click to print the table and corresponding indicator metadata

Click to access the IDS Online Tables Help file

# Data Sources and Methodology

## Data Sources

### *Debtor reporting system*

The principal sources of information for the tables in *International Debt Statistics 2022* are reports to the World Bank through the World Bank's Debtor Reporting System (DRS) from member countries that have received either International Bank for Reconstruction and Development (IBRD) loans or International Development Association (IDA) credits. The DRS has its origin in the World Bank's need to monitor and assess the financial position of its borrowers. Since 1951, borrowers have been required to provide statistics on their public external debt and private sector debt that benefit from a public guarantee. Reporting countries submit reports on the annual status, transactions, and terms of the long-term external debt of public agencies and that of private ones guaranteed by a public agency in the debtor country. The DRS maintains these records on a loan-by-loan basis. In 1973, coverage of the DRS was expanded to include private sector nonguaranteed borrowing, but for this category of debt, data are provided by borrowers in aggregate rather than loan by loan.

Data submitted to the DRS are processed in the World Bank External Debt (WBXD) system, along with additional information received from the African Development Bank, the Asian Development Bank, the Inter-American Development Bank (IDB), the International Monetary Fund (IMF), institutions of the World Bank Group (IBRD and IDA), and the European Bank for Reconstruction and Development (EBRD). The WBXD is an internal system of the World Bank. Among its outputs is the International Debt Statistics (IDS) database, from

which the tables in this publication and online database are produced.

Data on exports and imports (on a balance of payments basis), international reserves, current account balances, foreign direct investment (FDI) on equity, portfolio equity flows, and primary income of FDI are drawn mainly from the IMF, supplemented by United Nations Conference on Trade and Development (UNCTAD) reports and country data. Balance of payments data are presented according to the sixth edition of the IMF's *Balance of Payments Manual* (BPM6). Official aid flows come from data collected and published by the Development Assistance Committee (DAC) of the Organisation for Economic Co-operation and Development (OECD). Short-term external debt data are as reported by debtor countries or are estimates based on the Bank for International Settlements (BIS) quarterly series of commercial banks' claims on low- and middle-income countries. For some countries, estimates were prepared by pooling creditor and debtor information. Data on the gross national income of most low- and middle-income countries are collected from national statistical organizations or Central Banks by visiting and resident World Bank missions.

Every effort has been made to ensure the accuracy and completeness of the external debt statistics. Coverage has been improved through the efforts of the reporting agencies and close collaboration between the Bank and our partners, Commonwealth Secretariat (COMSEC) and UNCTAD, which provide debt recording and reporting systems across the globe, as well as through the work of the World Bank missions, which visit member countries to gather data and to provide technical assistance on debt issues. Nevertheless, quality and coverage vary among debtors and may also vary for the same

debtor from year to year. Data on long-term external debt reported by member countries are checked against, and supplemented by, data from several other sources. Among these sources are the statements and reports of several regional development banks, government lending agencies, and official government websites.

## Methodology

### Aggregations

Total debt stock and other aggregate measures are derived from the summation of loan-level data on stocks and flows after conversion to a common currency. Other tabulations are compiled using terms and conditions reported in the loan-level data, such as currency composition, cancellations, rescheduling of other liabilities into long-term public and publicly guaranteed external debt, and debt buybacks.

Aggregates for regional and income groups are based on the World Bank's operational classifications, which may differ from common geographic usage or income groups used by other organizations. Country classifications of DRS reporting countries in 2020 are shown in the country groups section. The same classification is used for all historical data shown in *International Debt Statistics* and the online tables and online database.

### Currency conversion

Data on external obligations are normally reported to the World Bank in the currency of repayment and are converted into a common currency (U.S. dollars) using official exchange rates published by the IMF.

Commitments, disbursements, and debt service payments (flows) are converted to U.S. dollars at the annual average exchange rate for the year. Debt outstanding (disbursed and undisbursed) at the end of a given year (stock) is converted at the exchange rate in effect at the end of the relevant year. Consequently, year-to-year changes in debt outstanding and disbursed may not be equal to net flows (disbursements less principal repayments); similarly, changes in debt outstanding (including undisbursed debt) may not equal commitments less repayments. Discrepancies will be particularly significant when exchange rates have moved sharply during the year. Projected debt service is converted to U.S. dollars at rates in effect at the end of December 2020.

Beginning with 1991, all ruble debt owed to the former Soviet Union has been converted at a rate of US\$1 = 0.6 ruble, except in cases where a bilateral agreement specifying a different conversion rate is in place. Adoption of this methodology does not constitute an endorsement by the World Bank staff of the appropriateness or validity of the exchange rate used. That matter must be resolved bilaterally between the Russian Federation and its debtor countries.

Starting with the 1988–89 edition of *World Debt Tables* (a predecessor of IDS), all data pertaining to IBRD loans from 1985 onward are recorded at their current market value. Starting with the 1991–92 edition, all data pertaining to Asian Development Bank loans from 1989 onward are recorded at their current market value. Starting with the 1998 edition, all data pertaining to African Development Bank and African Development Fund loans from 1997 onward are recorded at their current market value.

### Debt stock and flow reconciliation

Because of currency conversions and the timing of transactions, there may be differences between the change in aggregate stocks from one period to the next and flows during the relevant period; changes in debt outstanding, including undisbursed amounts, will therefore differ from commitments less repayments.

Changes in the stock of debt from one period to the next can be attributed to five factors: the net flow of debt, the net change in interest arrears, the capitalization of interest, a reduction in debt resulting from debt forgiveness or other debt reduction mechanisms, and cross-currency valuation effects. Any residual difference in the change in stock not explained by one of those five factors may indicate inconsistencies in the reported data or specific phenomena prevailing in an individual country (for example, an incomplete historical series for all categories of debt). Starting in 1989, the IDS includes the debt stock reconciliation, but not all components are shown in the IDS print edition and online tables.

### External debt restructuring

Starting in 1985, the WBXD includes information on the restructuring of debt by official creditors in the context of the Paris Club, restructuring

by commercial creditors, debt swap operations, buybacks, and bond exchanges. It attempts to capture accurately the effect of debt restructuring on both external debt stocks and external debt flows, consistent with the terms on which the restructuring takes place. In the compilation and presentation of external debt data, a distinction is made between cash flows and imputed flows. According to this criterion, restructured service payments and the shift in liabilities from one financial instrument to another as a result of debt restructuring are considered to be imputed flows. Both cash flows and imputed flows are recorded separately in WBXD.

The imputed flows and stock changes associated with debt restructuring are included in the IDS tables and online database to complement the cash-basis transactions recorded in the main body of the data. Such data encompass information on the debt stock and debt flows restructured each year, the amount of principal forgiven (interest forgiven is shown as a memorandum item), and the amount of external debt stock reduced either by forgiveness or by a debt buyback operation. Changes in creditors and debtors that result from debt restructuring are also reflected. For example, when insured commercial credits are rescheduled, the creditor classification shifts from private to official (bilateral), reflecting the assumption of the assets by the official credit insurance agencies in the creditor country. The IDS data will show a reduction in the external debt owed to the original private creditors equal or similar to the amount of debt restructured and a corresponding increase in the debt owed to the new official creditor. Similarly on the debtor side, when a government accepts responsibility for the payment of restructured debt previously owed by a private enterprise, the relevant change in the debtor category will be reflected. Likewise, if short-term external debt is restructured into a long-term obligation, the stock of short-term external debt will decline and the stock of long-term external debt will rise by the amount of short-term debt restructured. In the event of a debt swap of long-term external debt (external debt to equity, external debt for nature, or external debt for development), the face value of the external debt swapped will be recorded as a decline in long-term external debt stock, but no flow transaction (principal repayment) will be recorded.

### *Projections of future disbursements and debt service payments*

The WBXD system projects future disbursements and future debt service payments on the assumption that every existing loan commitment will be fully used and repaid in full.

### *Future disbursements*

Disbursement projections are made using one of the following methods:

- *Specific schedules.* Debtor countries are requested to submit a schedule of future disbursements, if available, at the time each new loan is first reported.
- *Standard schedules.* In the absence of specific schedules, the WBXD system projects the future disbursement schedule according to the undisbursed balance of each loan at the end of the most recent reporting period.

These projected schedules are based on profiles derived from the disbursement pattern of comparable loans that fully disbursed. Thirty different profiles have been compiled corresponding to each category of creditor and, in the case of official creditors, for concessional and nonconcessional loans. Each profile is derived by applying regression analysis techniques to a body of data on actual disbursements for each fully disbursed loan in the WBXD database. The profiles are periodically updated to take into account the evolving pattern of disbursements observed for fully disbursed loans.

Future principal payments are generated by the WBXD system according to the repayment terms of each loan. Principal repayments (amortization) are based on the amount of the loan commitment. If the amortization schedule follows a set pattern (for example, equal semiannual payments), the WBXD system calculates repayments automatically using the loan commitment amount, the first and final payment dates, and the frequency of the payments. If future payments are irregular, the WBXD system requires a schedule.

Future interest payments are generated by the WBXD system according to the disbursed and outstanding balance of the loan at the beginning of the period. Using the interest rate specified in the loan contract, the first and final interest payment dates, and the frequency of payments, the WBXD system calculates the stream of future interest

payments due. If interest payments are irregular, the WBXD system requires a schedule.

Future debt service payments are the sum of future principal and interest payments due on existing commitments, including the undisbursed portion. They do not include debt service payments that may become due as a result of new loans contracted in subsequent years, nor do they take into account the effect of any change to future debt service obligations resulting from actions such as prepayment or rescheduling or from cancellations that occurred after the most recent year-end data reported to the DRS.

Both projected disbursements and future debt service payments are converted into U.S. dollars using end-December 2020 exchange rates. Likewise, future interest payments on loans with a variable interest rate (for example, loans from commercial banks tied to the London Interbank Offered Rate [LIBOR]) are based on the interest rate prevailing at end-December 2020.

#### *Treatment of arrears*

The DRS collects information on arrears of both principal and interest. Principal in arrears is included in the amount of long-term external debt outstanding and is shown separately. Interest in arrears on long-term external debt and interest in arrears on the use of IMF credit are included as part of short-term external debt outstanding and are shown separately. Clearance of interest in arrears by repayment will be recorded as an interest payment in the relevant creditor category of the loan (or loans) on which the arrears were incurred, as a corresponding reduction in the level of short-term debt outstanding, and as a net reduction in interest arrears. Clearance of interest arrears through debt restructuring or forgiveness will be recorded as a reduction in the level of short-term debt outstanding and a net reduction in interest arrears. When interests are rescheduled, they will be capitalized: This change will be recorded as an increase in long-term debt outstanding equal to the amount of interest capitalized and the reduction in short-term debt outstanding noted previously.

## **External Debt and Its Components**

This section describes the compilation of the major components of external debt included

in the IDS tables and database and the relationship between them, as shown in figure A.1. Information about general methods of compiling external debt data is discussed in the previous section titled “Methodology.” For concise definitions, see the glossary.

#### *Total external debt*

Total external debt shown in the IDS is the sum of long-term external debt, short-term debt, and IMF credit. It represents the total debt owed to nonresident creditors and is repayable in both foreign and domestic currency.

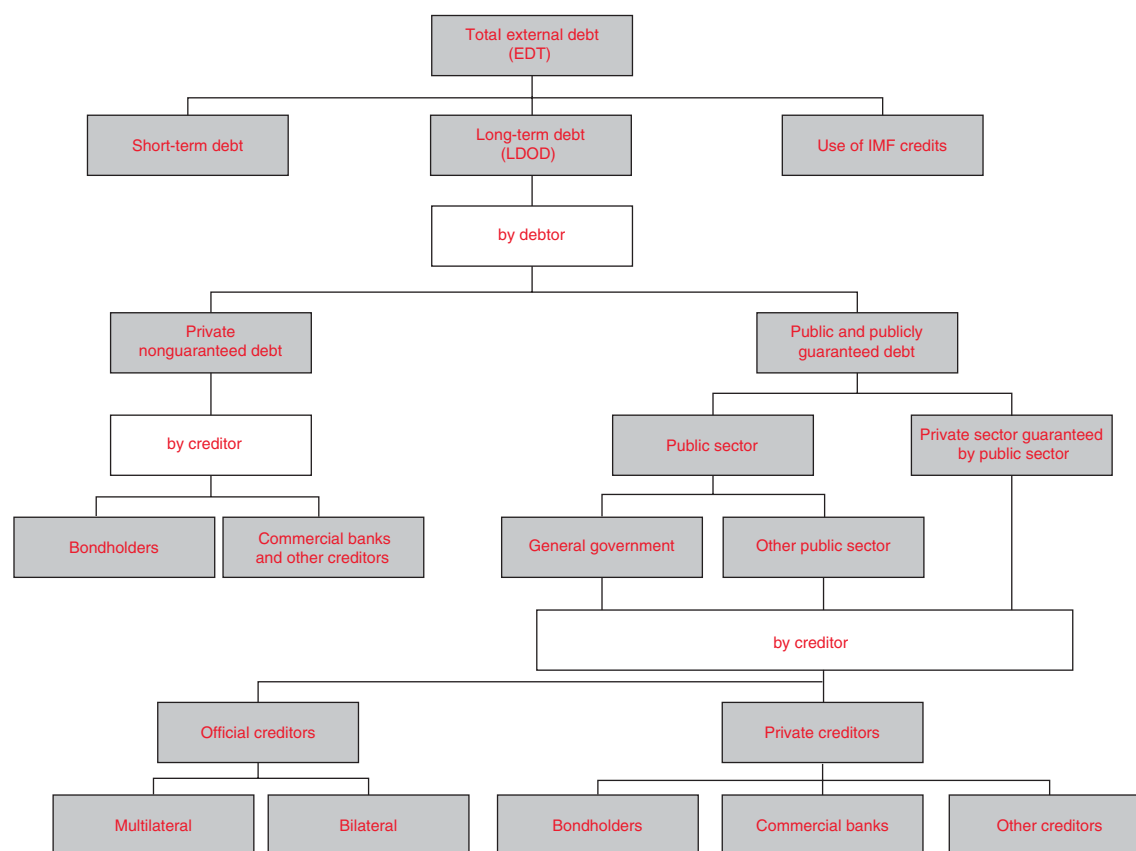

#### *Short-term debt*

Short-term debt is defined as external debt with an original maturity of one year or less. The DRS requires debtor countries to report only on their long-term external debt. However, to gain a comprehensive picture of total external obligations, the World Bank encourages debtor countries to voluntarily provide information on their short-term external obligations.

By its nature, short-term external debt is difficult to monitor: Loan-by-loan registration is normally impractical, and monitoring systems typically rely on information requested periodically by the Central Banks from the banking sector. The World Bank regards the debtor country as the authoritative source of information on its short-term debt. Unless otherwise specified in the country tables, the data for short-term debt are derived from the data provided by the quarterly external debt statistics database (see QEDS). BIS data on international bank lending is the second source of the short-term debt. These data are reported on the basis of residual maturity, but an estimate of short-term external liabilities by original maturity can be derived by deducting from claims due in one year those that, 12 months earlier, had a maturity of between one and two years. However, not all commercial banks report to the BIS in a way that allows the full maturity distribution to be determined, and the BIS data include liabilities only to banks within the BIS reporting area. Consequently, the results should be interpreted with caution.

The flow of short-term debt may be derived from the change in claims (stock) data in the BIS quarterly series over consecutive periods, but valuation adjustments resulting from exchange rate

**Figure A.1. External Debt and Its Components**

movements will affect the calculations, as will prepayment and refinancing of long-term maturities falling due. When short-term external debt has been rescheduled, lags in reporting and differences in the treatment of the rescheduled external debt by debtors and creditors may result in double counting.

Interest in arrears on long-term external debt and interest in arrears on the use of IMF credit are added to short-term debt and are separately identified.

#### *Use of IMF credit*

Data related to the operations of the IMF are provided by the IMF Treasurer's Department. They are converted from special drawing rights (SDR) into dollars using end-of-period exchange rates

for stocks and average-over-the-period exchange rates for flows. IMF trust fund operations under the Enhanced Structural Adjustment Facility, Extended Fund Facility, Poverty Reduction and Growth Facility, and Structural Adjustment Facility (Enhanced Structural Adjustment Facility in 1999) are presented together with all of the IMF's special facilities (buffer stock, supplemental reserve, compensatory and contingency facilities, oil facilities, and other facilities). SDR allocations are also included in this category. According to the BPM6, SDR allocations are recorded as the incurrence of a debt liability of the member receiving them (because of a requirement to repay the allocation in certain circumstances, and also because interest accrues). This debt item was introduced for the first time in IDS 2013 with historical data starting in 1999.

*Long-term debt*

Long-term debt has an original maturity of more than one year. It comprises the obligations of both public and private debtors. Private nonguaranteed debt comprises the external obligations of private debtors that are not guaranteed for repayment by a public entity in the debtor country.

Public and publicly guaranteed debt comprises the external obligations of public debtors and has two components: (a) public debt, which is borrowing by the national government or agency, by a political subdivision or agency, or by autonomous public bodies, and (b) publicly guaranteed debt, which is borrowing by a private agency that is guaranteed for repayment by a public entity.

*Private nonguaranteed debt*

The DRS reporting requirements were expanded in 1973 to include long-term private nonguaranteed debt. Data are reported annually on an aggregate basis and include, for the reporting year, the total amount of disbursed and outstanding debt; the amount of disbursements, principal repayments, and interest payments; the principal and interest rescheduled; and the projected principal and interest payments for future years. The aggregate data are usually reported in U.S. dollars, and no information on the underlying currency composition is given.

DRS reporting countries recognize the importance of monitoring borrowing by their private sector, particularly when it constitutes a significant portion of total external debt, but many countries acknowledge the difficulty of this process. Detailed data are available only when countries have registration requirements for private nonguaranteed debt in place, most commonly in connection with exchange controls. When formal registration of private nonguaranteed debt is not mandatory, compilers must rely on balance of payments data and financial surveys.

The data on private nonguaranteed debt in this publication is as reported or as estimated for countries where this type of external debt is known to be significant. The estimation of private nonguaranteed debt is based on the national data on quarterly external debt statistics (QEDS) or IMF data. Flows are derived from the change in stock over consecutive periods and are adjusted for the effects of exchange rate movements (assuming the currency composition mirrors that of public and publicly guaranteed debt)

and for any known debt restructuring. Principal repayments are estimated on the basis of the average maturity observed for loans to private sector borrowers in countries reporting to the DRS and on the basis of the stock of debt outstanding. Interest payments are estimated on the basis of the stock of debt outstanding and interest rates prevailing in international capital markets.

Balance of payments data provide a useful guideline in the estimation process: private nonguaranteed external debt may be derived as a residual between net long-term external borrowing recorded in the balance of payments and net long-term public and publicly guaranteed external debt reported to the DRS.

*Public and publicly guaranteed debt*

Data related to public and publicly guaranteed debt are reported to the DRS on a loan-by-loan basis. The data provide annual information on the disbursed and outstanding balance and the undisbursed balance of each loan, the cumulative disbursements, the principal and interest paid and principal and interest restructured in the reporting year, and the stock of any outstanding payment's arrears of principal and interest. Detailed information on the terms and conditions of each loan is also reported. Public debt and private debt publicly guaranteed are shown separately in this publication. Public sector debt is disaggregated by government and "other public" and further disaggregated by creditor type.

*Official creditors*

Official creditors include multilateral and bilateral lenders. In general, official creditors provide loans (and, in some cases, provide grants) to public bodies, although in some cases they may lend to other entities with a public guarantee.

Multilateral creditors are international financial institutions such as the World Bank, regional development banks, and other multilateral and intergovernmental agencies whose lending is administered on a multilateral basis. Funds administered by an international financial organization on behalf of a single donor government constitute bilateral loans (or grants). For lending by a number of multilateral creditors, the data presented in this publication are taken from the creditors' records. Such creditors include the African Development Bank, the Asian Development Bank, the IDB, IBRD, and IDA. (IBRD and IDA are institutions of the World Bank.)

Bilateral creditors are governments and their agencies, including Central Banks, aid agencies, official export credit agencies, and autonomous agencies such as the U.S. Department of Agriculture or the Federal Home Loan Bank. Member countries of the OECD Development Assistance Committee (DAC) and some other countries also report information on loans extended bilaterally or officially guaranteed to the Creditor Reporting System of the OECD.

#### *Private creditors*

Private creditors include commercial banks, bondholders, and other private creditors. This line includes only publicly guaranteed creditors.

Nonguaranteed private creditors are shown separately.

Bonds include publicly issued or privately placed bonds.

Commercial bank loans are loans from private banks and other private financial institutions.

Credits of other private creditors include credits from manufacturers, exporters, and other suppliers of goods, plus bank credits covered by a guarantee of an export credit agency. This line is included in the online database but is not shown in the published tables. It can be obtained as the difference between (a) credits of total private creditors and (b) bonds and commercial bank loans.

## Data Documentation

### *Country-Specific Notes on Debt*

Country	Country Notes
Afghanistan	Short-term debt before 2015 is based on data from the BIS. Data include the effects of Paris Club debt restructuring agreements signed in 2010 and HIPC and MDRI debt relief. DSSI eligible and participating in 2020.
Angola	Long-term private nonguaranteed debt data are estimates based on Central Bank data and are not available before 2009. Short-term debt before 2012 is based on data from the BIS. DSSI eligible and participating in 2020.
Argentina	Long-term private nonguaranteed debt data before 2008 are World Bank staff estimates. Short-term debt before 2010 is based on data from the BIS. Long-term foreign direct investment debt is reported according to the BPM5 definition for entities with foreign ownership of 10 percent or more of the ordinary shares or voting power and excludes debt of fellow companies.
Azerbaijan	Long-term private nonguaranteed debt data are World Bank staff estimates based on the market data. Short-term debt is based on data from the BIS.
Bangladesh	Short-term debt before 2012 is based on data from the BIS. Long-term private nonguaranteed debt data from 2007 to 2018 are World Bank staff estimates based on reports provided by the country and are not available prior to 2007. DSSI eligible and not participating in 2020.
Belarus	Long-term private nonguaranteed debt data from 2014 are World Bank staff estimates based on reports provided by the country.
Belize	Long-term private nonguaranteed debt data from 2008 are based on Central Bank data. Long-term private nonguaranteed debt data for 2020 are based on reports provided by the country.

## Sources of the Macroeconomic Indicators

The macroeconomic data are prepared by The World Bank from a variety of sources. Data on Personal Transfers and Compensation of Employees are prepared by World Bank staff

based on IMF balance of payments statistics. Data on foreign direct investments and current account balance are prepared by World Bank staff based on IMF balance of payments statistics and UNCTAD's *World Investment Report*. Other macroeconomic data are from IMF balance of payments statistics.

Data on exports of goods, services, and primary income are based on countries' balance of payments statistics for the following countries:

Cameroon (2020)	Kyrgyz Rep. (2020)	Samoa (2020)
Comoros (2020)	Liberia (2020)	St. Lucia (2019–2020)
Dominica (2019–2020)	Madagascar (2020)	St. Vincent and the Grenadines (2019–2020)
Gambia, The (2019–2020)	Malawi (2020)	Tanzania (2020)
Grenada (2019–2020)	Mauritania (2020)	Uganda (2020)
Iran, Islamic Rep. (2010–2020)	Papua New Guinea (2019–2020)	Zimbabwe (2018–2020)
Jordan (2020)	Peru (2020)	
Kenya (2020)	Rwanda (2020)	

Data on imports of goods, services, and primary income are based on countries' balance of payments statistics for the following countries:

Cameroon (2020)	Kyrgyz Rep. (2020)	Samoa (2020)
Comoros (2020)	Liberia (2020)	St. Lucia (2019–2020)
Dominica (2019–2020)	Madagascar (2020)	St. Vincent and the Grenadines (2019–2020)
Gambia, The (2019–2020)	Malawi (2020)	Tanzania (2020)
Grenada (2019–2020)	Mauritania (2020)	Uganda (2020)
Iran, Islamic Rep. (2010–2020)	Papua New Guinea (2019–2020)	Zimbabwe (2018–2020)
Jordan (2020)	Peru (2020)	
Kenya (2020)	Rwanda (2020)	

Data on current account balance are based on countries' balance of payments statistics for the following countries:

Benin (2020)	Iran, Islamic Rep. (2010–2020)	Samoa (2020)
Burkina Faso (2020)	Jordan (2020)	Senegal (2019–2020)
Cameroon (2020)	Kenya (2020)	Sierra Leone (2020)
Central African Rep. (2020)	Kyrgyz Rep. (2020)	Solomon Islands (2020)
Chad (2020)	Liberia (2020)	Somalia (2020)
Comoros (2020)	Madagascar, Rep. of (2020)	St. Lucia (2019–2020)
Congo, Rep. of (2020)	Malawi (2020)	St. Vincent and the Grenadines (2019–2020)
Côte d'Ivoire (2020)	Mali (2019–2020)	Sudan (2020)
Dominica (2019–2020)	Mauritania (2020)	Tanzania (2020)
Gabon (2020)	Myanmar (2020)	Togo (2020)
Gambia, The (2019–2020)	Niger (2020)	Uganda (2020)
Grenada (2019–2020)	Papua New Guinea (2019–2020)	Zimbabwe (2018–2020)
Guinea-Bissau (2020)	Peru (2020)	
Guyana (2020)	Rwanda (2020)	

Data on personal transfers and compensation of employees are based on countries' balance of payments statistics for the following countries:

Dominica (2019–2020)	Peru (2020)	Tanzania (2020)
Grenada (2019–2020)	Rwanda (2020)	Uganda (2020)
Jordan (2020)	St. Lucia (2019–2020)	Zimbabwe (2018–2020)
Kyrgyz Rep. (2020)	St. Vincent and the Grenadines (2019–2020)	

Data on primary income on foreign direct investment are based on countries' balance of payments statistics for the following countries:

Cameroon (2020)	Rwanda (2020)	Sudan (2020)
Dominica (2019–2020)	St. Lucia (2019–2020)	Uganda (2020)
Grenada (2019–2020)	St. Vincent and the Grenadines (2019–2020)	

Data on foreign direct investment are based on countries' balance of payments statistics for the following countries:

Dominica (2019–2020)	Liberia (2020)	St. Vincent and the Grenadines (2019–2020)
Grenada (2019–2020)	Myanmar (2020)	Tanzania (2020)
Jamaica (2012–2020)	Peru (2020)	Uganda (2020)
Jordan (2020)	Rwanda (2020)	Zimbabwe (2018–2020)
Kyrgyz Rep. (2020)	St. Lucia (2019–2020)	

Data on portfolio equity are based on countries' balance of payments statistics for the following countries:

China (2010–2020)	Rwanda (2020)	Uganda (2020)
Dominica (2019–2020)	St. Lucia (2019–2020)	
Grenada (2019–2020)	St. Vincent and the Grenadines (2019–2020)

*Note:* Letters in parenthesis indicate DRS reporters' status: (A) as reported, (P) preliminary, and (E) estimated. The status "as reported" indicates that the country was fully current in its reporting under the DRS and that World Bank staff are satisfied that the reported data give an adequate and fair representation of the country's total public debt. "Preliminary" data are based on reported or collected information, but because of incompleteness or other reasons, an element of staff estimation is included. "Estimated" data indicate that countries are not current in their reporting and that a significant element of staff estimation has been necessary in producing the data tables.

a. For Bosnia and Herzegovina, total debt before 1999, excluding IBRD and IMF obligations and short-term debt, is included under Serbia.

b. Data prior to 2006 include Montenegro.

		Venezuela, RB

Note: Low-income countries are those with a GNI per capita of \$1,045 or less in 2020. Middle-income countries are those with a GNI per capita equal to or more than \$1,046 but equal to or less than \$12,695. Italicized countries are IDA-only countries as of July 1, 2021; IDA-only excludes blend and IBRD countries. Venezuela, RB is unclassified according to the World Bank FY2022 income classification owing to a lack of available data. Thus, Venezuela, RB has been excluded from the aggregate data.

# Glossary

## Debtor Reporting System (DRS)

**Bilateral official creditors** are official agencies that make loans on behalf of one government to another government or to public (and, in some cases, private) borrowers in another country.

**Bonds** are debt instruments issued by public and publicly guaranteed or private debtors with durations of one year or longer. Bonds usually give the holder the unconditional right to fixed money income or contractually determined, variable money income.

**Commitments of public and publicly guaranteed debt** constitute the total amount of new long-term loans to public sector borrowers or borrowers with a public sector guarantee extended by official and private lenders and for which contracts were signed in the year specified.

**Concessional debt** conveys information about the borrower's receipt of aid from official lenders at concessional terms as defined by the World Bank, that is, loans with an original grant element of 35 percent or more. Loans from major regional development banks—African Development Bank, Asian Development Bank, and the Inter-American Development Bank—are classified as concessional according the World Bank classification.

**Contractual obligations on outstanding long-term external debt** are the anticipated debt service payments on long-term external debt contracted up to December 31 of the reporting year.

**Debt buyback** is the repurchase by a debtor of its own debt, either at a discount price or at par value. In the event of a buyback of long-term

debt, the face value of the debt bought back will be recorded as a decline in stock outstanding of long-term debt, and the cash amount received by creditors will be recorded as a principal repayment. For example, if a country buys back long-term external debt of face value B at a price P, then long-term external debt will decline by B, and principal repayment will increase by P. The difference between the price at which the debt was bought back and the face value is recorded as a debt stock write-off (the related transactions are not separately identified in the International Debt Statistics [IDS] publication but are available in the online database).

**Debt forgiveness grants** include both debts canceled by agreement between debtor and creditor and reductions in the net present value of official nonconcessional loans resulting from concessional rescheduling or refinancing. Data are recorded on a disbursement basis and include debt forgiveness from bilateral and multilateral creditors.

**Debt outstanding and disbursed** is the value at year's end of long-term external debt owed by public and publicly guaranteed debtors and private nonguaranteed debtors.

**Debt restructurings** are revisions to debt service obligations agreed on by creditors and debtors. Such agreements change the amount and timing of future principal and interest payments.

**Debt service to exports** is the ratio of the sum of principal repayments and interest paid on total long-term debt (public and publicly guaranteed debt and private nonguaranteed debt) to the value of exports of goods and services and receipts of primary income from abroad.

**Debt Service Suspension Initiative (DSSI)** took effect on May 1, 2020, and allowed 73 eligible countries to apply for a temporary suspension of debt-service payments owed to official bilateral creditors. The suspension period, originally set to end on December 31, 2020, has been extended through December 2021.

**Debt stock-flow reconciliation** shows the indicators that affect the change in debt stocks from one period to the next.

**Disbursements** are drawings during the year specified on loan commitments contracted by the borrower.

**Exports of goods, services, and primary income** constitute the total value of exports of goods and services, and primary income.

**External debt flows** are debt-related transactions during the year specified. They include disbursements, principal repayments, and interest payments.

**External debt stocks** comprise public and publicly guaranteed long-term external debt, private non-guaranteed long-term external debt, use of IMF credit, and short-term external debt, including interest arrears on long-term debt.

**External debt stocks to exports** is the ratio of outstanding external debt to the value of exports of goods and services and receipts of primary income from abroad.

**External debt stocks to GNI** is the ratio of outstanding external debt to gross national income.

**Foreign direct investment** refers to direct investment equity flows in the reporting economy. It is the sum of equity capital, reinvestment earnings, and other capital. Direct investment is a category of cross-border investment associated with a resident in one economy having control or a significant degree of influence on the management of an enterprise that is resident in another economy. Ownership of 10 percent or more of the ordinary shares or voting stock is the criterion for determining the existence of a direct investment relationship.

**Government sector debt** consists of all external debt obligations of all levels of the departments, branches, agencies, foundations, institutes, non-market and non-profit institutions controlled by the government, and other publicly controlled organizations engaging in non-market activities.

**Grace period** is the time between the date on which a loan is committed and the date on which the first principal payment is due. The information presented in International Debt Statistics is the average grace period on all public and publicly guaranteed debt committed during the specified period.

**Grants** are legally binding commitments that obligate a specific value of funds available for disbursement for which there is no payment requirement. They include debt forgiveness grants and grants from bilateral and multilateral agencies (such as the International Development Association).

**Gross national income (GNI)** is the sum of value added by all resident producers, plus any product taxes (less subsidies) not included in the valuation of output, plus net receipts of primary income compensation of employees and property income from abroad. Yearly average exchange rates are used to convert GNI from local currency to U.S. dollars.

**Heavily Indebted Poor Country (HIPC) Initiative** is a program of the World Bank and the International Monetary Fund (IMF) to provide debt relief to qualifying countries with unsustainable debt burdens.

**Imports of goods, services, and primary income** constitute the total value of goods and services imported and income payable to nonresidents. Interest arrears on long-term debt are interest payments due but not paid, shown on a cumulative basis.

**Interest arrears** are due and payable immediately and are therefore regarded as short-term obligations. Thus, an increase in interest arrears on long-term debt will be recorded as an increase in short-term debt. Interest in arrears on the use of IMF credit is also considered to be part of short-term external debt.

**Interest payments** are the amounts of interest paid in foreign currency, goods, or services in the year specified.

**Interest rate** is the interest rate applicable to a loan commitment as specified in the loan contract. The information presented in International Debt Statistics is the average interest on all public and publicly guaranteed debt committed during the specified period.

**IMF charges** are the amounts of interest paid in foreign currency in the year specified for transactions with the IMF.

**IMF purchases** are the total drawings on the general resources account of the IMF during the year specified, excluding drawings in the reserve tranche.

**IMF repurchases** are the amounts of principal (amortization) paid in foreign currency in the year specified for transactions with the IMF.

**International reserves** constitute the sum of a country's monetary authority's holdings of special drawing rights, its reserve position in the IMF, its holdings of foreign exchange, and its holdings of gold (valued at year-end London prices).

**Long-term external debt** is debt that has an original or extended maturity of more than one year and that is owed to nonresidents by residents of an economy and is repayable in foreign currency, goods, or services.

**Maturity** is the date on which the final principal repayment on a loan is due. It is the sum of the grace and repayment periods. The information presented in International Debt Statistics is the average maturity on all public and publicly guaranteed debt committed during the specified period.

**Multilateral Debt Relief Initiative (MDRI)** is a program of the World Bank, the IMF, the Inter-American Development Bank, and the African Development Bank that provides additional debt relief to countries that have completed the HIPC process.

**Multilateral official creditors** are official agencies owned or governed by more than one country that provide loan financing. They include international financial institutions such as the World Bank, regional development banks, and other intergovernmental agencies.

**Multilateral to external debt stocks** is the ratio of the stock of debt owed to multilateral creditors to total external debt.

**Net flows on external debt** are disbursements on long-term external debt and IMF purchases minus principal repayments on long-term external debt and IMF repurchases. Up to 1984, this calculation included only long-term external debt and

IMF flows. Since 1985, the calculation includes the change in stock of short-term debt (excluding interest arrears on long-term external debt).

**Official creditors** are governments or other bilateral public entities, such as export-import agencies, development agencies, and multilateral financial institutions, such as the World Bank and regional development banks.

**Personal transfers and compensation of employees** is the sum of personal transfers and compensation of employees. Personal transfers consist of all current transfers in cash or in kind made or received by resident households to or from nonresident households. Personal transfers thus include all current transfers between resident and nonresident individuals. Compensation of employees refers to the income of border, seasonal, and other short-term workers who are employed in an economy where they are not resident and of residents employed by nonresident entities.

**Portfolio equity** is the category of international investment that covers investment in equity securities. Equity securities include shares, stocks, participation, or similar documents (such as American Depositary Receipts) that usually denote ownership of equity.

**Present value of debt outstanding** is the nominal value of all future debt service obligations on existing debt discounted at prevailing market rates of interest. The interest rates used in this calculation are the Commercial Interest Reference Rates (CIRR) for each relevant currency compiled and published by the Organisation for Economic Co-operation and Development.

**Primary income on FDI** are payments of direct investment income (debit side), which consist of income on equity (dividends, branch profits, and reinvested earnings) and income on the intercompany debt (interest).

**Principal arrears on long-term debt** are principal repayments due but not paid on long-term external debt, shown on a cumulative basis.

**Principal repayments** are the amounts of principal (amortization) paid in foreign currency, goods, or services in the year specified with respect to long-term external debt.

**Private creditors** are bondholders, commercial banks, and other trade-related lenders.

**Private nonguaranteed debt** is debt owed by private sector borrowers to external creditors on loans that do not benefit from a public sector guarantee by the debtor country.

**Public and publicly guaranteed debt outstanding and disbursed** is the value of debt at year's end of public sector borrowers, or borrowers with a public sector guarantee, owed to official and private lenders.

**Public and publicly guaranteed external debt** comprises public debt (an external obligation of a public debtor, such as the national government or agency, a political subdivision or agency, or an autonomous public body) and publicly guaranteed external debt (an external obligation of a private debtor that is guaranteed for repayment by a public entity).

**Public debt** is an external obligation of a public debtor, including all levels of government, state-owned enterprises, public corporations, development banks, and any other autonomous public bodies of government.

**Publicly guaranteed debt** is an external obligation of a private debtor that is guaranteed for repayment by a public entity.

**Reserves to external debt stocks** is the ratio of international reserves to outstanding external debt.

**Reserves to imports (months)** is the ratio of international reserves to the value of imports of goods, services, and primary income in the year shown and is expressed in months:

$$\frac{\text{Reserves}}{\text{Imports}/12}$$

**Short-term external debt** has an original maturity of one year or less. Available data permit no distinction among public, publicly guaranteed, and private nonguaranteed short-term external debt.

**Short-term to external debt stock ratio** is the ratio of short-term external debt to total outstanding external debt.

**Special Drawing Rights (SDRs)** refer to an international reserve asset that was created by the IMF in 1969 to supplement its member countries' official reserves. The value of SDRs is based on a basket of four key international currencies: the U.S. dollar, the pound sterling, the Japanese yen, and the euro. In addition to playing a role as a supplementary reserve asset, SDRs serve as the unit of account for the IMF and some other international organizations.

**Technical cooperation grants** include (a) free-standing technical cooperation grants, which are intended to finance the transfer of technical and managerial skills or of technology for the purpose of building up general national capacity without reference to any specific investment projects, and (b) investment-related technical cooperation grants, which are aimed at strengthening the capacity to execute specific investment projects.

**Total amount forgiven** is the total amount of principal and interest due, principal and interest in arrears, and debt stock forgiven in the year specified.

**Total amount rescheduled** is the total amount of external debt rescheduled, including principal and interest due, principal and interest in arrears, charges, penalties, and debt stock in the year specified.

**Total change in external debt stocks** is the difference in the external debt stock between two consecutive years.

**Use of IMF credit** denotes members' drawings on the IMF other than amounts drawn against the country's reserve tranche position. Use of IMF credit includes purchases and drawings under Stand-By, Extended, Structural Adjustment, Enhanced Structural Adjustment, and Systemic Transformation Facility Arrangements as well as trust fund loans. SDR allocations are also included in this category.

ECO-AUDIT  
*Environmental Benefits Statement*

The World Bank Group is committed to reducing its environmental footprint. In support of this commitment, we leverage electronic publishing options and print-on-demand technology, which is located in regional hubs worldwide. Together, these initiatives enable print runs to be lowered and shipping distances decreased, resulting in reduced paper consumption, chemical use, greenhouse gas emissions, and waste.

We follow the recommended standards for paper use set by the Green Press Initiative. The majority of our books are printed on Forest Stewardship Council (FSC)–certified paper, with nearly all containing 50–100 percent recycled content. The recycled fiber in our book paper is either unbleached or bleached using totally chlorine-free (TCF), processed chlorine-free (PCF), or enhanced elemental chlorine-free (EECF) processes.

More information about the Bank's environmental philosophy can be found at <http://www.worldbank.org/corporateresponsibility>.

**International Debt Statistics (IDS)**, a long-standing annual publication of the World Bank, features external debt statistics and analysis for the 123 low- and middle-income countries that report to the World Bank Debtor Reporting System. **IDS 2022** includes (1) an overview analyzing global trends in debt stocks of and debt flows to low- and middle-income countries within the framework of aggregate capital flows (debt and equity); (2) an evaluation of the volume of debt service deferred through the Debt Service Suspension Initiative (DSSI) in 2020 and the 2021 extension for participating eligible countries, as well as borrowing trends and debt service costs for DSSI-eligible countries that did not participate in the initiative; (3) tables and charts detailing debtor and creditor composition of debt stock and flows, terms of new commitments, and maturity structure of future debt service payments and debt burdens, measured in relation to gross national income and export earnings

for each country; (4) one-page summaries per country, plus global, regional, and income group aggregates showing debt stocks and flows, relevant debt indicators, and metadata for six years (2010 and 2016–20); and (5) a user guide describing the tables and content, definitions and rationale for the country and income groupings used in the report, data notes, and information about additional resources and comprehensive datasets available to users online.

Unique in its coverage of the important trends and issues fundamental to the financing of low- and middle-income countries, **IDS 2022** is an indispensable resource for governments, economists, investors, financial consultants, academics, bankers, and the entire development community. For more information on **IDS 2022** and related products, please visit the World Bank's Data Catalog at <https://datacatalog.worldbank.org/dataset/international-debt-statistics>.
