

# Gujarat

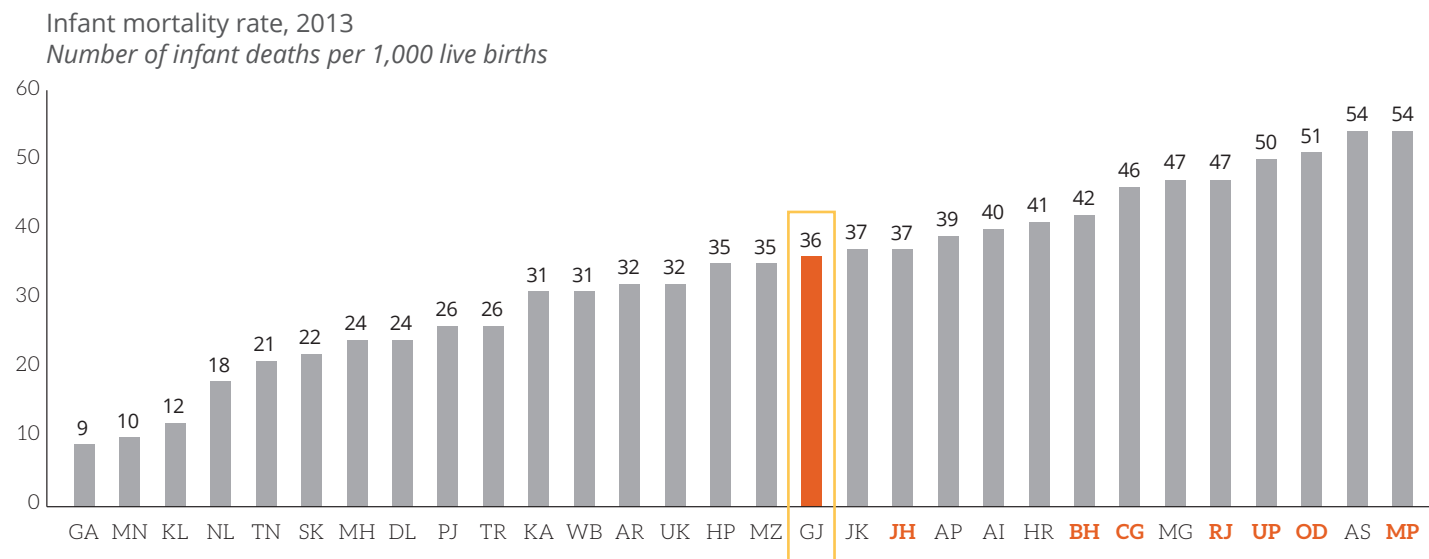

## Health and Education

There is mixed progress on health and education in Gujarat. While Gujarat's infant mortality rate is declining, malnutrition remains high, even among the rich. Moreover, open defecation — again close to the national average — is more prevalent among the poor. As for education, only a third of all adults have completed secondary school. And, while schooling for the younger generation is a bright spot, with a larger share of children now in school, better learning outcomes have not followed. Enrollment in public schools remains high.

### Infant mortality rate is declining in Gujarat

### Infant mortality rate in Gujarat is below the national average
