The Little Data Book on Financial Inclusion 2018 was prepared by the Finance and Private Sector Development Team of the Development Research Group, by a team led by Leora Klapper under the supervision of Asli Demirguc-Kunt and comprising Saniya Ansar, Jake Hess, Deeksha Kokas, Adrienne Sigrid Larson, and Dorothe Singer. The work was carried out under the management of Shantayanan Devarajan. The team is grateful to Oya Pinar Ardic Alper, Margaret J. Miller, Sebastian-A Molineus, Ceyla Pazarbasioglu-Dutz, Mahesh Uttamchandani, and World Bank colleagues in the Development Economics Vice Presidency and the Finance, Competitiveness & Innovation Global Practice as well as staff at the Bill & Melinda Gates Foundation, the Better Than Cash Alliance, the Consultative Group to Assist the Poor, the GSM Association, the G20's Global Partnership for Financial Inclusion, and the Office of the UNSGSA (UN Secretary-General's Special Advocate for Inclusive Finance for Development) for providing substantive comments at different stages of the project. The team is also grateful for the excellent survey execution and related support provided by Gallup, Inc. under the direction of Jon Clifton.

The team is especially grateful to the Bill & Melinda Gates Foundation for providing financial support making the collection and dissemination of the data possible.

Substantial contributions were made by Ana Florina Pirlea, Tariq Afzal Khokhar, Omar Hadi, and Jomo Tariku from the World Bank's Development Data Group. The book's cover design was done by Jomo Tariku based on an original work by Communications Development Incorporated. Typesetting was done by BMWW. Alison Strong provided editorial assistance.

Foreword

By Her Majesty Queen Máxima of the Netherlands UN Secretary-General's Special Advocate for Inclusive Finance for Development

UN Secretary-General's Special Advocate for Inclusive Finance for Development and Honorary Patron of the G20's Global Partnership for Financial Inclusion

For those of us committed to advancing financial inclusion, no tool is of greater value than the Global Financial Inclusion (Global Findex) database. This invaluable data set provides a rigorous, multidimensional picture of where we stand and how far we have come in expanding access for all to the basic financial services people need to protect themselves against hardship and invest in their futures.

The Little Data Book on Financial Inclusion presents key findings from the Global Findex database, with detailed insight into how adults in more than 140 economies access accounts, make payments, save, borrow, and manage risk. As the data show, each economy has its own successes, challenges, and opportunities when it comes to financial inclusion. A growing body of research demonstrates the impact of country advances on significant priorities such as reducing poverty, hunger, and gender inequality. Today, member states at the United Nations are using Global Findex data to track progress toward the Sustainable Development Goals.

Dozens of national governments have adopted policies to expand financial inclusion. These and other global and national efforts are paying off. New Global Findex data reveal that globally the share of adults owning an account is now 69 percent, an increase of seven percentage points since 2014. These numbers translate into 515 million adults who have gained access to financial tools. The 2017 figures on overall account ownership continue the upward trajectory we've seen since the Global Findex database was first released—with financial inclusion rising 18 percentage points since 2011, when account ownership was 51 percent.

The 2017 Global Findex data reflect the continued evolution of financial inclusion. Recent progress has been driven by digital payments, government policies, and a new generation of financial services accessed through mobile phones and the internet.

The power of financial technology to expand access to and use of accounts is demonstrated most persuasively in Sub-Saharan Africa, where 21 percent of adults now have a mobile money account—nearly twice the share in 2014 and easily the highest of any region in the world. While mobile money has been centered in East Africa, the 2017 update reveals that it has spread to West Africa and beyond.

Digital technology is also transforming the payments landscape. Globally, 52 percent of adults have sent or received digital payments in the past year, up from 42 percent in 2014. Technology giants have moved into the financial sphere, leveraging deep customer knowledge to provide a broad range of financial services. Payments made through their technology platforms are facilitating higher account use in major emerging economies such as China, where 57 percent of account owners are using mobile phones or the internet to make purchases or pay bills—roughly twice the share in 2014.

Foreword

Some advances have been made in helping women gain access to financial services. In India three years ago, men were 20 percentage points more likely than women to have an account. Today, India's gender gap has shrunk to 6 percentage points thanks to a strong government push to increase account ownership through biometric identification cards.

Still, in most of the world women continue to lag well behind men. Globally, 65 percent of women have an account compared with 72 percent of men, a gap of seven percentage points that is all but unchanged since 2011. Nor has equality in account ownership been achieved in other regards. The gap between rich and poor has not improved since 2014: account ownership is 13 percentage points higher among adults living in the wealthiest 60 percent of households within economies than among those in the poorest 40 percent. And urban populations continue to benefit from far broader access to finance than rural communities. In China around 200 million rural adults remain outside the formal financial system.

The continued involvement of businesses will be vital for unlocking opportunities to expand financial inclusion. Companies pay wages in cash to about 230 million unbanked adults worldwide; switching to electronic payrolls could help these workers join the formal financial system. Mobile phones and the internet also offer strong openings for progress: globally, one billion financially excluded adults already own a mobile phone and about 480 million have internet access.

But the private sector, governments, and development organizations all need to sharpen their focus on the use of accounts, which has stagnated for saving and borrowing. Without people actively using their accounts, the impact of our work will be lost.

The Global Findex database is an indispensable resource for those of us working to increase financial inclusion. I am proud to partner with the Global Findex team, and I thank the World Bank's Development Research Group and the Bill & Melinda Gates Foundation for supporting this crucial initiative. I hope governments, businesses, and development champions will continue to use *The Little Data Book* and its trove of information as we redouble our efforts to deepen financial inclusion.

Introduction

The Little Data Book on Financial Inclusion 2018 is a pocket edition of the Global Findex database published in 2018. The data represent a third round of data collection since the Global Findex database was launched in 2011. The database provides nationally representative, demand-side data on access to and use of accounts, credit, payments, and savings by adults age 15 and above in 144 economies. In addition, new indicators measure how people make or receive digital payments. This book presents data for selected indicators by country, region, and income group. For some indicators the data are disaggregated by gender, income level, employment status and rural residence.

This publication is part of the Global Findex suite of products, available both online and in hard copy. To learn more and to access the most recent version of the database, visit the Global Findex web page (http://www.worldbank.org/globalfindex).

The Global Findex database is housed in the World Bank's Development Research Group and funded by the Bill & Melinda Gates Foundation. It is the first public global database of demand-side indicators to track the financial lives of individuals over time. Covering a range of topics, the data can be used to create a more complete picture of how people save, borrow, manage risk, and send and receive money. And as the Global Findex survey questionnaire has expanded, the data have allowed more nuanced insights into the use of mobile technology to pay bills, receive wages and government payments, and send money to and receive it from family living elsewhere.

This third edition of the database was compiled in 2017 and includes updated indicators on access to and use of formal and informal financial services and additional data on financial technology, or fintech, including the use of mobile phones and the internet to complete financial transactions. The data were collected by Gallup, Inc. over the 2017 calendar year alongside the Gallup World Poll survey.

Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. This book and the accompanying research have the potential to aid policy makers, the private sector, and the entire global community as together we shape an effective environment for shared prosperity.

Data notes

The data in this book are for 2017 unless otherwise noted in the tables or the glossary.

Regional aggregates include data for low- and middle-income economies only.

Figures in italics are for years or periods other than those specified.

Symbols used:

- .. indicates that data are not available or that aggregates cannot be calculated because of missing data.
- 0 or 0.0 indicates zero or a value small enough that it would round to zero at the number of decimal places displayed.
 - \$ indicates current U.S. dollars.

Data are shown for 144 economies. The term *country* (used interchangeably with *economy*) does not imply political independence or official recognition by the World Bank but refers to any economy for which the authorities report separate social or economic statistics.

Regional tables

Income group tables

The World Bank's main criterion for classifying economies for operational and analytical purposes is gross national income (GNI) per capita. Each economy for which data are presented in this book is classified as low income, middle income, or high income based on its GNI per capita in 2016. Low-and middle-income economies are sometimes referred to as developing economies. The use of the term is convenient; it is not intended to imply that all economies in the group are experiencing similar development or that other economies have reached a preferred or final stage of development. Classification by income does not necessarily reflect development status. Income classifications of economies remain fixed over the course of the World Bank's fiscal year (ending on June 30) regardless of any revisions during the year to their income per capita data.

Low income economies are those with a GNI per capita of \$1,005 or less in 2016.

Middle income economies are those with a GNI per capita between \$1,006 and \$12,235. Lower-middle-income and upper-middle-income economies are separated at a GNI per capita of \$3,955.

High income economies are those with a GNI per capita of \$12,236 or more.

Afghanistan

Gender-matched sampling was used during the final stage of selection.

Algeria

Global Findex data exclude sparsely populated areas in the far South, representing about 10 percent of the population.

Argentina

Global Findex data exclude dispersed rural population areas, representing about 5.7 percent of the population.

Azerbaijan

Global Findex data exclude Kelbadjaro-Lacha, Nagorno-Karabakh, and Nakhichevan territories, representing about 14 percent of the population.

Bahrain

Global Findex data include only Bahraini nationals, Arab expatriates, and non-Arabs who were able to participate in the survey in Arabic or English.

Bangladesh

Global Findex data exclude three hill districts in Chittagong (Bandarban, Khagrachori, and Rangamati) for security reasons. The excluded areas represent about 1 percent of the population.

Cameroon

Global Findex data exclude some localities because of security concerns: Blangoua, Bourrha, Darak, Fotokol, Goulfey, Hile-Alifa, Kolofata, Koza, Mayo Moskota, Mogode, Mora, Tokombere, Waza, and Zina. The excluded areas represent about 10 percent of the population.

Central African Republic

Global Findex data exclude some prefectures because of security concerns: Bamingui-Bangoran, Basse-Kotto, Haute-Kotto, Haut-Mbomou, Mbomou, Nana-Grébizi, Ouham, Ouham-Pende, and Vakaga. The excluded areas represent about 40 percent of the estimated population.

Chad

Global Findex data exclude seven regions because of security concerns and wilderness (Bourkou, Ennedi, Ouaddai, Salamat, Sila, Tibesti, and Wadi Fira) as well as quartiers or villages with less than 50 inhabitants. The excluded areas represent about 20 percent of the population.

Chile

Global Findex data exclude the remote areas Antarctica, Easter Island, and Juan Fernández Island, representing about 0.04 percent of the population.

China

Global Findex data exclude Tibet and Xinjiang, representing less than 5 percent of the population. Unless otherwise noted, data for China do not include data for Hong Kong SAR, China; Macao SAR, China; or Taiwan, China.

Congo, Dem. Rep.

Global Findex data exclude parts of several provinces (Eastern Kasai, Equateur, Katanga, North Kivu, Orientale, and South Kivu) and all of Western Kasai province for security reasons. The excluded areas represent about 34 percent of the estimated population.

Cyprus

GNI per capita data refer to the area controlled by the government of Cyprus.

Egypt, Arab Rep.

Global Findex data exclude frontier governorates (Matruh, New Valley, North Sinai, Red Sea, and South Sinai) because of their remoteness and small population share. The excluded areas represent less than 2 percent of the population.

Georgia

GNI per capita and population data exclude Abkhazia and South Ossetia.

India

Global Findex data exclude Northeast states and remote islands, representing less than 10 percent of the population.

Israel

Global Findex data exclude East Jerusalem. This area is included in the sample for West Bank and Gaza.

Japan

Global Findex data exclude 12 municipalities near the nuclear power plant in Fukushima, representing less than 1 percent of the population.

Jordan

Because of a change in survey methodology, Global Findex data for 2017 include any respondent in a fixed household able to participate in the survey in Arabic. This resulted in a higher percentage of self-reported non-Jordanians (12 percent in the 2017 sample, compared with less than 5 percent in previous waves).

Kuwait

Global Findex data include only Kuwaiti nationals, Arab expatriates, and non-Arabs who were able to participate in the survey in Arabic or English.

Lao PDR

Global Findex data exclude Xaisomboun Province and some communes in Bokeo, Huaphanh, Luangnamtha, Luangprabang, Oudomxay, Phongsaly, Saravane, Sekong, Xayaboury, and Xienkhuang because of remoteness or security issues. The excluded areas represent about 10 percent of the population.

Lebanon

Global Findex data exclude towns of Baalbek, Bint Jbeil, and Hermel under the control of Hezbollah as well as the Beirut suburb of Dahiyeh. The excluded areas represent about 13 percent of the population. Excluded zones were replaced by areas within the same governorate.

Madagascar

Global Findex data exclude unsafe or inaccessible regions, representing about 25 percent of the population.

Mali

Global Findex data exclude the regions of Gao, Kidal, Mopti, and Tombouctou because of security concerns. These regions represent 23 percent of the population.

Moldova

GNI per capita, population, and Global Findex data exclude Transnistria (Prednestrovie) because of security concerns. The excluded area represents about 13 percent of the population.

Montenegro

Global Findex data exclude some very small and remote villages (with less than 150 people), representing about 0.5–1.5 percent of the population.

Morocco

GNI per capita data include the former Spanish Sahara. Global Findex data exclude the Southern provinces, representing about 3 percent of the population.

Myanmar

Global Findex data exclude the states of Chin, Kachin, and Kayah, representing less than 5 percent of the population.

Nigeria

Global Findex data exclude the states of Adamawa, Borno, and Yobe because of security concerns. These states represent 7 percent of the population.

Russian Federation

Global Findex data exclude remote or difficult-to-access areas in the Far North, North Caucasus, and Far East (Nenets autonomous region, Yamalo-Nenets autonomous region, Chukotsk region) as well as other remote or difficult-to-access districts. The excluded areas represent about 20 percent of the population.

Saudi Arabia

Global Findex data include only Saudi nationals, Arab expatriates, and non-Arabs who were able to participate in the survey in Arabic or English.

Singapore

Global Findex data exclude 7 percent of condominium dwellers. About 14 percent of the population were living in condominiums as of 2016.

South Sudan

Global Findex data exclude parts of 9 of 10 states because of security concerns. It excludes the majority of Unity State and Upper Nile State as well as all of Jonglei State except Bor South County. The excluded areas represent 44 percent of the population.

Tanzania

GNI per capita data refer to mainland Tanzania only.

Thailand

Global Findex data exclude three provinces in the South region (Narathiwat, Pattani, and Yala) for security reasons as well as a few districts in other provinces. The excluded areas represent less than 4 percent of the population.

Ukraine

Global Findex data exclude occupied and conflict areas in Donetsk and Lugansk oblasts. The excluded areas represent 10 percent of the population.

United Arab Emirates

Global Findex data include only Emirati nationals, Arab expatriates, and non-Arabs who were able to participate in the survey in Arabic or English.

Venezuela, RB

Global Findex data exclude the Federal Dependencies because of remoteness and difficulty of access, as well as some additional areas because of security concerns. The excluded areas represent about 5 percent of the population.

Vietnam

Global Findex data exclude 11 provinces: An Giang, Dac Lak, Dien Bien, Gia Lai, Ha Giang, Ha Tinh, Kien Giang, Kon Tum, Nghe An, Quang Binh, and Thanh Hoa. The excluded areas represent about 19 percent of the population.

West Bank and Gaza

Global Findex data exclude areas with security concerns close to the Israeli borders, areas accessible only to special Israeli permit holders, and areas with a population of less than 1,000. The excluded areas represent less than 2 percent of the population. The data include East Jerusalem.

Glossary

Account denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution (see definition for *financial institution account*) or report personally using a mobile money service in the past 12 months (see definition for *mobile money account*).

Borrowed any money denotes the percentage of respondents who report borrowing any money (by themselves or together with someone else) for any reason and from any source in the past 12 months.

Borrowed from a financial institution or used a credit card denotes the percentage of respondents who report borrowing any money from a bank or another type of financial institution, or using a credit card, in the past 12 months.

Borrowed from family or friends denotes the percentage of respondents who report borrowing any money from family, relatives, or friends in the past 12 months.

Financial institution account denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution.¹

GNI per capita (\$) is gross national income (GNI) converted to U.S. dollars using the World Bank Atlas method, divided by total midyear population. GNI is the sum of value added by all resident producers plus any product taxes (less subsidies) not included in the valuation of output plus net receipts of primary income (compensation of employees and property income) from abroad. GNI, calculated in national currency, is usually converted to U.S. dollars at official exchange rates for comparisons across economies. The World Bank Atlas method is used to smooth fluctuations in prices and exchange rates. It averages the exchange rate for a given year and the two preceding years, adjusted for differences in rates of inflation between the country and the euro area, Japan, the United Kingdom, and the United States. Data are for 2016. Aggregates include economies not shown in this book. (World Bank)

Made or received digital payments denotes the percentage of respondents who report using mobile money, a debit or credit card, or a mobile phone to make a payment from an account, or report using the internet to pay bills or to buy something online, in the past 12 months. It also includes respondents who report paying bills, sending or receiving remittances, receiving payments for agricultural products, receiving government transfers, receiving wages, or receiving a public sector pension through a financial institution account or through a mobile money account in the past 12 months.

Mobile money account denotes the percentage of respondents who report personally using a mobile money service in the past 12 months.²

No deposit and no withdrawal from a financial institution account denotes the percentage of respondents who report neither a deposit into nor a withdrawal from their financial institution account in the past 12 months.

No deposit and no withdrawal from an account denotes the percentage of respondents who report neither a deposit into nor a withdrawal from their account in the past 12 months.

Outstanding housing loan denotes the percentage of respondents who report having an outstanding loan from a bank or another type of financial institution to purchase a home, an apartment, or land.

Population, age 15+ is the midyear estimate of all adult residents age 15 and above regardless of legal status or citizenship, except for refugees not permanently settled in the country of asylum who are generally considered part of the population of their country of origin. Data are for 2016. Aggregates include economies not shown in this book. (Eurostat, United Nations Population Division, and World Bank)

Saved any money denotes the percentage of respondents who report personally saving or setting aside any money for any reason and using any mode of saving in the past 12 months.

Saved at a financial institution denotes the percentage of respondents who report saving or setting aside any money in the past 12 months by using an account at a bank or another type of financial institution.

Saved for old age denotes the percentage of respondents who report saving or setting aside any money in the past 12 months for old age.

Saved using a savings club or person outside the family denotes the percentage of respondents who report saving or setting aside any money in the past 12 months by using an informal savings club or a person outside the family.

Sent or received domestic remittances through an account denotes the percentage of respondents who report personally sending any of their money in the past 12 months to, or receiving any of it from, a relative or friend living in a different area of their country using a financial institution account or a mobile money account.

Sent or received domestic remittances through an OTC service denotes the percentage of respondents who report personally sending any of their money in the past 12 months to, or receiving any of it from, a relative or friend living in a different area of their country over the counter in a branch of their financial institution, through a mobile banking agent, or through a money transfer service.

Sent or received domestic remittances through cash only denotes the percentage of respondents who report personally sending any of their money in the past 12 months to, or receiving any of it from, a relative or friend living in a different area of their country *only* by handing cash to or receiving cash from that person, or by sending or receiving it through someone they know.

Used a debit or credit card to make a purchase denotes the percentage of respondents who report using their own debit or credit card to make a purchase in the past 12 months.

Glossary

Used a mobile phone or the internet to access an account denotes the percentage of respondents who report using a mobile phone or the internet to make a payment, to make a purchase, or to send or receive money through their account at a bank or another type of financial institution or through the use of a mobile money service in the past 12 months.

Used an account to pay utility bills denotes the percentage of respondents who report making a payment for water, electricity, or trash collection directly from a financial institution account or through a mobile money account in the past 12 months.

Used an account to receive government payments denotes the percentage of respondents who report personally receiving any payment from the government (public sector wages, a public sector pension, or government transfers of financial support) directly into a financial institution account, into a card, or into a mobile money account in the past 12 months.

Used an account to receive private sector wages denotes the percentage of respondents who report receiving a private sector salary or private sector wages directly into a financial institution account, into a card, or into a mobile money account in the past 12 months.

Used the internet to pay bills or to buy something online denotes the percentage of respondents who report making bill payments or online purchases using the internet, whether through a mobile phone, a computer, or some other device, in the past 12 months.

Notes

For indicators for which the source of data is other than the 2017 edition of the Global Findex database, the source is given at the end of the definition or is as follows:

For 2011 Global Findex data, the source is Asli Demirguc-Kunt and Leora Klapper, "Measuring Financial Inclusion: Explaining Variation in Use of Financial Services across and within Countries," *Brookings Papers on Economic Activity* (Spring 2013).

For 2014 Global Findex data, the source is Demirgüç-Kunt, Asli, Leora Klapper, Dorothe Singer, and Peter van Oudheusden. Forthcoming. "The Global Findex Database 2014: Measuring Financial Inclusion and Opportunities to Expand Access to and Use of Financial Services." World Bank Economic Review.

1. Financial institution account includes respondents who report having an account at a bank or at another type of financial institution, such as a credit union, a microfinance institution, a cooperative, or the post office (if applicable), or having a debit card in their own name. It includes an additional 3.93 percent of respondents in 2017 who report receiving wages, government transfers, a public sector pension (included in 2017 data), or payments for agricultural products into a financial institution account in the past 12 months; paying utility bills or school fees from a financial institution account in the past 12 months; or receiving wages or government transfers into a card in the past 12 months.

Glossary

2. Mobile money account includes respondents who report personally using services included in the GSM Association's Mobile Money for the Unbanked (GSMA MMU) database to pay bills or to send or receive money in the past 12 months. It includes an additional 0.60 percent of respondents in 2017 who report receiving wages, government transfers, a public sector pension (included in 2017 data), or payments for agricultural products through a mobile phone in the past 12 months.
