

Karnataka

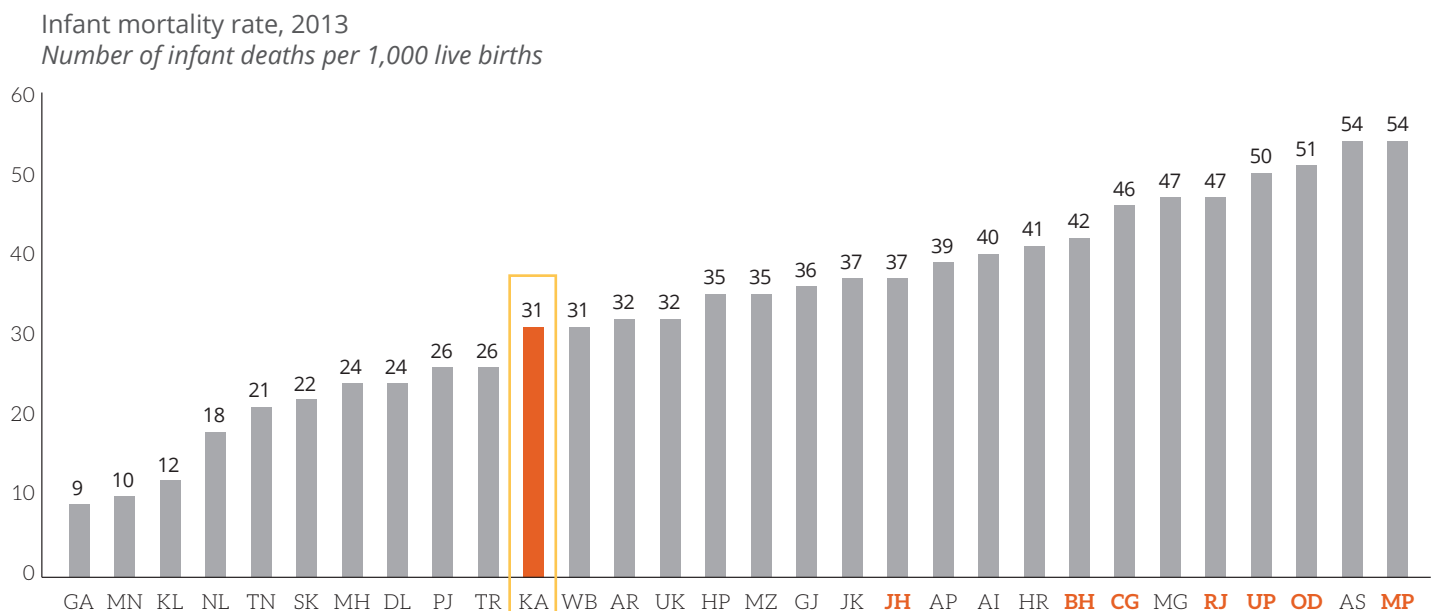

Health and Education

Health and education outcomes in Karnataka have been improving; nonetheless progress could be faster. As for health, on the positive side, infant mortality is below the national average, and declining. However, malnutrition is high among the lower income groups. And, nearly one in every two households in Karnataka defecates in the open, with open defecation being even higher among the lower income groups. In education, secondary school completion is higher in Karnataka than in many other states. And, learning outcomes have remained close to the national average. Moreover, enrollment in private schools has increased after 2012.
