The World Bank does not accept responsibility for the views expressed herein which are those of the author(s) and should not be attributed to the World Bank or to its affiliated organizations. The findings, interpretations, and conclusions are the results of research supported by the Bank; they do not necessarily represent official policy of the Bank. The designations employed, the presentation of material, and any maps used in this document are solely for the convenience of the reader and do not imply the expression of any opinion whatsoever on the part of the World Bank or its affiliates concerning the legal status of any country, territory, city area, or of its authorities, or concerning the delimitations of its boundaries, or national affiliation.

AFRICA REGION POPULATION PROJECTIONS 1987-88:

Short- and Long-Term Estimates

A B S T R A C T

Population projections from 1985 to 2030 for every country in the World Bank's sub-Saharan Africa region are reported. Age structure and demographic indicators are given for each quinquennium. Demographic indicators are also reported for groups of countries corresponding to Bank country departments in the region, as well as, for comparison, for the whole world and for countries grouped by income.

A general introduction describes the methodology, provides a general overview of results, and compares estimates with U.N. estimates. The introduction includes tables and appended figures comparing Bank regions and departments.

FOREWORD

A report on World Bank population projections for 1987-88, the tenth report in a series that began with the Bank's first World Development Report in 1978, is being published this year for external use for the third time. In addition, for use within the Bank, separate working papers are being produced on each of the four Bank regions. This working paper contains the population projection results that pertain to the Africa region.

The Introduction to the main report was expanded to address questions about methodology and data sources that were raised about previous reports. This Introduction is reproduced here in full. It includes a brief history of the population estimates and projections work in the World Bank; delineates sources of the principal data used; provides a comparison of the Bank estimates with U.N. estimates; and tabulates basic demographic information on the World Bank's new operational regions and departments.

Appendix C, which does not appear in the book, has been added to the Introduction to highlight comparisons among Bank country departments.

A program to run Bank population projections on personal computers is available for staff who wish to make use of it.

Dean T. Jamison
Chief
Population, Health and Nutrition Division

ACKNOWLEDGEMENTS

A number of persons helped us in the preparation of the book and this working paper. From the very beginning, Ms. Junko Sasaki was responsible for much of the computer work. The systematic manner in which she carried out the computer work helped maintain the accuracy of the estimates and projections. Randy Bulatao was available whenever we needed his help in computer programming and solving methodological questions. The work will be in good hands when he takes over the main responsibility for this work next year. One of the major time consuming tasks in this work has been data input. Cathy Cataldo spent a considerable part of her short stay with the Department on this work, and Ella Hornsby was responsible for typing the introduction and summary tables.

We are also greatly indebted to the staff of the United Nations Population Division, New York, to Celade in Santiago, Chile, and to the U.S. Bureau of the Census, Washington, D.C., for their great help in providing the latest demographic information from their files.

K. C. Zachariah
My T. Vu

METHODS, ASSUMPTIONS, AND PRINCIPAL RESULTS

This set of population projections was prepared for the World Bank's World Development Report 1987 and replaces the set used in World Development Report 1986. The methodology, the years for which estimates and projections are made, and the format of the tables, are more or less the same as those used in the 1985 publication.

History of the Bank's Population Estimates and Projections

Population projections are prepared routinely by the World Bank each year. In recent years they have been published first in summary form in the Bank's World Development Report and later in much greater detail in separate book form.

Although the Bank's population projections began only in 1978 when the first World Development Report was published, the program of preparing population projections by Bank staff began several years earlier, soon after the creation of the Population and Human Resources Division (PHRD). This division began its demographic work using outside consultants, not only for demographic information and analyses but also for population estimates and projections. Feeling the need to build an in-house capacity for demographic analysis and projections in the Bank, the Population and Human Resources Division recruited the necessary staff and began making population projections for selected countries on an ad hoc basis. This exercise proved very useful not only because of the availability of population projections in-house, but also because it gave to the staff the ability to answer economists and project officials about demographic questions in general. Therefore, the exercise was extended to all Bank member countries resulting in the Bank's first staff paper on population projections with the title: "Population Projections for Bank Member Countries 1970-2000" (by K. C. Zachariah and Roberto Cuca, 1974).

When PHRD was formally requested to make population estimates and projections for World Development Report 1978, the task was entrusted to a small group under the supervision of a senior demographer. This was the beginning of the annual work on population projections for all countries of the world, including countries that are not members of the Bank. This group assembled the base data needed for the projections in consultation with the country economists and outside agencies, such as the U.N. Population Division, the U.S. Bureau of Census, etc; developed a methodology; borrowed a computer program from the Population Council; and prepared short-term and long-term population projections for all countries of the world. Later, the Bank developed its own computer program to meet the special needs of Bank publications.

Until 1983, projections were prepared mainly for use within the Bank: for preparing population and other demographic tables included in the annual World Development Indicators of the World Development Report, for country economic and sector work, and to provide background data for policy work on population and development. Detailed results were given limited circulation through PHRD staff papers and PHN Technical Notes. Since 1984, detailed results have been published for internal and external use under the

title World Population Projections, Short- and Long-term Estimates by Age and Sex with Related Demographic Statistics.

With the publication of World Development Report 1984, which had population and development as its special topic, the Bank's population projections reached an international audience. For months during the summer of 1984, the world press was inundated with population estimates and projections prepared by the World Bank. With this international publicity came also greater critical scrutiny of the Bank's projections by outside demographic experts. As a result, some of the gaps in the Bank's projections became evident. They related mostly to lack of information on sources of base data and lack of historical series. Some of these criticisms have been taken into consideration in this publication. Others will be remedied in subsequent issues.

The Bank's work in the area of population estimates and projections is never a duplication of the efforts of the U.N. Population Division and other agencies. In some areas, the Bank makes use of data produced by these agencies, but for several countries it adds its own data collected by Bank economists and project officers. In general, it coordinates its work with that of other international agencies.

From the beginning, the Bank's method of projection was always different from that of the U.N.. The distinguishing characteristics of the Bank estimates and projections were:

- a. annual updating of base data, estimates, and projections, compared with biannual updating by the U.N. and less frequent updating by other agencies
- b. quick response to changes in base data due to information from new censuses or sample surveys
- c. production of short-term as well as long-term projections (until stationary stage) through a single method and computer program
- d. inclusion of all countries of the world
- e. classification of countries not only by geographic regions but also by development status and national income.

Assumptions and Methods

Base Total Population and Age-Sex Composition

The base year for the 1987 projections is 1985. As in previous years, the total population in 1985 was taken from a variety of sources. A number of countries have had population censuses in recent years. For these countries the mid-1985 population estimates were obtained from the recent census results.

For developed countries, the mid-1985 population statistics were taken from official estimates published in the most recent issue of the U.N. Population and Vital Statistics Report. For the Sub-Saharan African region, revision of base data was made on the basis of new information obtained from censuses or surveys. For the rest, base data were obtained from either the

U.N. Population Division, the U.S. Bureau of the Census, other international sources such as Demographic Statistics (Eurostat 1984), or the World Bank's economic and sector reports.

Details about the source and method of estimating the 1985 population by country are given in Appendix Table A1.

The total population in 1985 was distributed by age and sex on the basis of the percentage distribution from the latest census results (adjusted for errors in age reporting), or from the U.N. revised projections.

Mortality Level and Trend

The base-year mortality levels in the projections are in general the same as those used in the recent U.N. projections. The exceptions are where the Bank's own analysis indicated a different mortality level (see Appendix Table A2 for details).

For projecting mortality, life expectancy at birth was used as the mortality index. It was projected on the basis of a simple model using past patterns of relationships between life expectancy change, its level, and the female primary school enrollment ratio.

On the basis of recent evidence of a close relationship between female education and childhood mortality, world data were examined to determine whether female educational levels could be used as a discriminant of mortality levels and change. The latest available data on the percentage of girls enrolled in primary school (normally the years 1973-77) were obtained from the UNESCO Statistical Year Book for 1978-79 for all countries covered in the World Development Report. Data on the percentage of women 20-24 years of age in the 1960s and early 1970s who had had some schooling were obtained from Statistical Report and Studies: Statistics of Educational Attainment and Illiteracy 1945-74 (UNESCO 1977). Unfortunately, such data were available for only thirty developing countries.

For all countries, current life expectancy at birth proved to be correlated with current female primary school enrollment ($R^2 = 0.495$). For developing countries alone, however, the results were more striking: $R^2 = 0.499$ for current female primary-school enrollment, 0.526 for female education ten years ago. This group of countries is of course the Bank's prime concern. Thus, there seemed to be a case for estimating trends on the basis of female education.

The next step was to examine the relationship between changes in life expectancy and education, from 1965-69 to 1975-79, for a given life expectancy (the input variable) measured at the initial (1965-69) level. The data on female primary school enrollment for 1965-69 were also taken from the UNESCO Statistical Report and Studies. The objective was to estimate future yearly increases in female life expectancy for different categories of female primary school enrollment. Naturally, the underlying assumption is that the relationship between the initial level of primary

school enrollment and subsequent change in life expectancy will be the same in the future as it was from 1965-69 to 1975-79, but there seems to be no practical alternative to such an assumption.

After much experimentation with various groupings, countries were divided into two groups: those with initial (1965) female primary school enrollment of less than 70 percent (the "low" group) and those with 70 percent or more (the "high" group). Initially, all data points were included and were divided into low, medium, and high groups. This produced widely scattered data in two lower groups and a poor fit when regression equations were calculated. Attempts were made to improve the fit by changing the dividing point for the medium and low groups and by removing many observation points based on less reliable data. The second procedure improved the R^2 values, but produced curves indicating relationships contrary to expectations. This, together with the small size of the resulting groups and the fact that even some of the remaining observations were based on insufficient data, led to the conclusion that it would be safer to use two categories instead of three and to include all the data (with the exception of those for Saudi Arabia).

Experience has shown that the changes in life expectancy increase in size up to a certain point and thereafter decrease in size. Accordingly, regression equations were calculated using linear and quadratic terms for initial life expectancy.

Fairly good results were obtained for the high group (see Figure 1). The large variance in the low group (Figure 2), particularly in the countries with lower life expectancies, resulted in a poor fit, but given the scope of the analysis and the constraints imposed by the data, this was the best curve that could be found for the group.

With the exception of Saudi Arabia, there was no country in the low group in which initial life expectancy exceeded fifty-five years. Since the curve for the low group was almost linear, the extrapolation of increments for life expectancies of more than fifty-five years would have resulted in unrealistically high values. It was assumed that countries with low educational levels will behave similarly to those with high levels when the former reach the same educational attainment. Therefore, the curve for the low group was made to coincide with that of the high group at higher expectations of life at birth (Figure 3). Table 1 shows the expected increments for the two groups.

For a given expectation of life at birth, survival ratios for males and females were derived from the Coale-Demeny model life tables, with mortality levels up to 26 (that is, the expectation of life at birth for females equals 82.5). These tables are in four sets--North, South, East, and West. The particular set used for each depends on region and mortality level, as follows:

Figure 1. *High Female Primary School Enrollment*

Note: Raw data and fitted values based on regression equation.

Figure 2. *Low Female Primary School Enrollment*

Note: Raw data and fitted values based on regression equation.

North Africa, the Middle East, and Latin America	
Below 18	South
18 and above	West
East and South Asia, North America, Europe, and Oceania	
All levels	West

Fertility Level and Trend

The principal sources for the base fertility rates were also the revised U.N. population projections (1984). The total fertility rates (TFR) for 1985-90 were taken directly from the U.N. source for some of the developed countries, for a large number of countries in Latin America, and for a few of the Asian and Sub-Saharan African countries. For several countries, most of them in Asia, Latin America, and Sub-Saharan Africa, independent estimates of the TFR were taken from the Bank's economic reports, the World Fertility Survey, and the U.S. Bureau of the Census. In some of these sources, fertility measures were given in terms of the crude birth rate (CBR). The total fertility rate corresponding to the CBR was estimated by using the available age-sex composition and age-specific fertility pattern (see Appendix Table A3 for details about sources).

The starting point in estimating future fertility trends is an assumption about what year the net reproduction rate (NRR) is likely to reach unity. It is assumed that in all countries the NRR will reach unity sometime during 2000-2050.

The selection of a year for a particular country is governed by the following factors: (a) expectation of life at birth for females of that country during 1985-90, (b) TFR of that country during 1985-90, (c) changes in the birth rate during 1970-80, and (d) status of the country with respect to family planning. The year in which $NRR = 1$ for each country was determined on the basis of a regression equation estimated from the latest data available. The estimated variables (a) through (d) were substituted in the regression to derive the year in which $NRR = 1$. The nearest year ending in zero or five was finally selected.

The country's status regarding family planning was estimated on the basis of the percentage of married women 15-49 years of age who were currently (latest year available) using some method of contraception, including methods used by husbands. Information for a majority of the countries was readily available from standard sources. For other countries,

program statistics were used. The countries were classified into three categories, based on the strength of the family planning variable:

Family planning status	Contraceptive prevalence	Category
Strong	31 or higher	3
Moderate	16-30	2
Weak	15 or lower	1

For the Sub-Saharan African countries it was also assumed that if the countries are in the same subregion and have the same demographic background they will reach a replacement level at more or less the same time.

The TFR in the year in which $NRR = 1$ was estimated on the basis of the country's mortality level in that year. The TFRs for intermediate years were calculated in three steps. First, an exponential curve was fitted to the TFR in 1985-90 and to the TFR in the year in which $NRR = 1$. Second, this curve was used to estimate the TFR in 1990-95 for Asian, Latin American, and North African countries where the TFR in 1985-90 was greater than 3. Third, the TFRs for the other periods were estimated by fitting a reverse geometric curve in the first segment (up to 1990-95). Such a procedure ensured a slower decline in the beginning of the projection period, when fertility rates were high, and a faster decline at the intermediate level.

The procedure followed for the Sub-Saharan African countries and for countries where the TFR in 1985-90 was less than 3 was slightly different. Recent data indicate that the TFR has started to drop in several Sub-Saharan African countries, such as Botswana, the People's Republic of the Congo, Ghana, Kenya, South Africa, Swaziland, and Zimbabwe. In the well-known zone of low fertility and high sterility in Central Africa, however, there appears to have been a rise in fertility and fall in sterility in all the affected areas--the Central African Republic, Chad, Gabon, Zaire, and so on--for which data are available. Therefore, the countries in Sub-Saharan Africa were studied one by one. It was assumed that the TFR would remain constant until 1990-95 in some of them, drop right away in others, and increase slightly in the rest until 1990-95. Then, in all of the Sub-Saharan African countries, fertility would decline according to a reverse geometric curve until half the period between 1990-95 and the year in which $NRR = 1$. Thereafter, fertility would decline geometrically to the replacement level. For a few countries in Asia and the Middle East, it was also assumed that the TFR would remain constant for some years before beginning to decline. For the low-fertility countries ($TFR < 3$), fertility rates were projected by assuming a geometric decline (or increase where $NRR < 1$) to the replacement level.

For the period beyond the year in which $NRR = 1$, the TFRs were kept at the replacement level and estimated on the basis of the mortality level at each of the five-year intervals.

In some countries fertility is already below replacement level or will decrease to below replacement level during the next five to ten years. Since a population will not become stationary if its net reproduction rate is other than 1, to make estimates of the hypothetical stationary population in these countries it was necessary to assume that their fertility rates would regain replacement levels. For the sake of consistency with the estimates made for other countries, it was assumed that the total fertility rate in the countries where fertility is already below the replacement rate would remain constant until 1990-95, increase to the replacement level by the year 2020, and then remain constant.

The projection model includes the feature that the age pattern of TFR changes as fertility rates decline. The patterns at TFR = 7.6, 4.1, and 2.8 are shown in Figure 4. For intermediate rates, the age pattern falls between the curves. In these patterns, the mean age at childbirth declines from 28.86 years when TFR = 7.6, to 28.45 when TFR = 4.1, and to 27.98 when TFR = 2.8 (as in the case of Kenya).

Migration Level and Trend

One of the sources for the estimates of international migration was also the revised U.N. population projections. Other sources were the documents prepared by the U.N. for the 1984 International Conference on Population, the U.S. Bureau of the Census, Demographic Statistics (Eurostat 1984), and a Bank consultant report on international migration.

Because of the limitations of the data, some amount of quinquennial net migration by sex was assumed for countries where past and present trends of migration flow appear to be significant. An age-sex structure was then created for these countries based on the sex ratio of migrants.

The estimates of future migration are speculative. For most economies the net migration rates were assumed to be zero by the year 2000; for a few they were allowed to continue, but not beyond the year 2025. To deal with the refugee movements that have occurred recently in Africa, Asia, and Latin America, the Bank's projections include as migrants only those who are likely to remain permanently in the receiving countries. The average quinquennial number of net migrants by sex and net migration rates by country and region are provided in the detailed country results.

Summary of Results

Population projections were prepared separately for every country in the world. Since many countries reach stability only after 175 years of projection, the results are presented at five-year intervals for the period 1985-2030 and at twenty-five-year intervals thereafter.

For each of the 186 separate units, the following information is presented in the accompanying tables:

- o Population by sex and five-year age groups, 1985-2150
- o Birth rate, death rate, rate of natural increase, and growth rate for five-year periods from 1985-90 to 2025-2030, and twenty-five-year periods from 2000-2025 to 2125-2150
- o Gross reproduction rate (GRR) and total fertility rate for five-year periods and twenty-five-year periods
- o Net reproduction rate for five-year periods and twenty-five-year periods
- o Expectation of life at birth ($e(0)$) and infant mortality rates (IMR) for males and females separately for five-year periods and twenty-five-year periods
- o Net migrants by sex and net migration rates for the five-year periods and the twenty-five-year periods.

According to the projections, the total world population would increase from 4.840 billion in 1985 to 6.176 billion in the year 2000, and 8.188 billion in the year 2025 (see Table 2). The average growth rate during 1985-90 would be about 1.71 percent per year, decreasing to less than one percent by 2025. The birth rate would decline by 10 points but the death rate would decline only by less than 2 points.

The world's population increased by about 83 million in 1985, and this absolute increase continues to rise. About five years from now, the increase will peak at around 88 million. The next century will experience not only a steady decline in the rate of growth, but also a steady decline in the absolute increase.

Five billion persons. By far the most significant demographic event of 1987 is the birth of the 5 billionth person of the world. The most likely date when the total population of the world crossed 5 billion is sometime between the end of June and early July. According to the figures given in this report the event occurred on June 24th, rather than, as the U.N. estimated, on July 11th.

Uncertainties in the total population of some of the large countries, especially those in Africa that have not taken a proper population census in recent years, make it difficult to be precise in this estimate. The monthly growth in the world population in mid-1987 is about 7 million, and in one country alone the uncertainties could be as large as a month's global growth. For example, for Nigeria, the Bank estimate of the total population in 1985 was 96 million and the U.N. estimate was 91 million. The difference is equivalent to 20 days of global growth. But these uncertainties are not large enough to make the margin of error more than 2 or 3 months. Thus, the chances are very high that the world population passed 5 billion in the summer of 1987.

Previous and future billions. Table 3 gives the year in which the world population reached or will reach 1 billion, 2 billion, and so on up to 10 billion. It took an indefinitely long period of time for the world population to grow to a billion around the turn of the 19th century. But then, the pace of population growth became more rapid, and in fact the pace has been accelerating since then. It took about 120 years to reach 2

billion, 34 years after that for 3 billion, 14 years more for 4 billion, and only 13 years more for 5 billion. Thus, each succeeding billion was added in an ever decreasing period of time.

The projections given in this report indicate that world population growth, in absolute terms, has not yet reached its maximum, although the peak is not far off. The 6th and the 7th billions are likely to be reached in a shorter period of about 12 years, but the subsequent billions will take longer. Thus the remaining years of this century will experience relatively stable population growth (in absolute terms) of about 88 million a year. This stability in absolute growth is a result of a decreasing rate of growth and an increasing total population.

Stationary population. The rate of population growth has been declining since the latter half of the 1960's when it reached its peak of 2 percent per year. The absolute growth is likely to reach its peak by 1992 and then start declining. But even then the total population will continue to increase for quite some time. It may take more than a century for the total population of the world to show a tendency to decrease. What will be the population of the world be when it stops growing? Any long-term growth estimation is essentially speculative, and the Bank's estimate is no exception. According to the estimate in this report, the total population of the world will not exceed 11 billion. The 10th billion will be reached around 2070, but the population will stabilize below 11 billion.

Growth diversity by Bank regions. The four Bank regions have very marked demographic characteristics and growth prospects (see Tables 4 and Table 5; more detail is presented in Tables 10 and 11 and the Appendix Figures). At one extreme is the sub-Saharan Africa region with its high fertility, mortality, and growth rates. The Africa region is expected to double its population in about 20 years. Asia has the lowest fertility and growth rate, and is likely to double in population only in 150 years.

Latin America and the Caribbean (LAC) has the lowest mortality rate, and partly as a result, its growth rate is higher than that of Asia. The total population of the region is likely to double by 2039. The stationary population is more than twice its present size.

The Europe-Middle East-North Africa (EMENA) region is demographically two distinct sub-regions. Its European part has one of the lowest fertility and growth rates anywhere in the world, but crude mortality is slightly higher than in some other subregions because of an older age structure. On the other hand, its Afro-Asian part has growth rates closer to that of the Africa region. But, unlike Africa, the high growth rate in the EMENA region is constituted by relatively lower birth and death rates and a significant immigration rate. The total population of the EMENA region is expected to double by 2023.

Bank member countries in Asia have more than half the population of the world, and the region also contributes nearly half of the world's annual population growth. But Asia's share in growth will decrease and Africa's share will overtake Asia's. In the latter half of the twenty-

second century, much of the world's population growth will take place in Africa.

Figure 5 indicates an interesting complementarity between the growth in Asia and Africa. As growth in one goes up, growth in the other goes down. By late next century, the Asian contribution will decrease to less than 30 percent while that of Africa will increase to nearly 55 percent. Twenty five years later, by 2110, the African contribution will decrease to 30 percent while that of Asia will increase once again to above 40 percent. The relative ranks will change once again later in that century. These fluctuations are essentially a reflection of the lag in the African demographic transition.

The Country Departments within the Africa region are fairly homogeneous; so are the country departments in the Latin American region. As noted above, the European countries in the EMENA region are very much different from the rest of the region. In Asia, China stands at one extreme with the lowest growth rate, and the department constituting Bangladesh, Nepal, and Sri Lanka stands at the other end with the highest growth rate.

At the national level:

- o China has the largest population.
- o India makes the largest annual contribution to the world's population growth.
- o Kenya and Rwanda have the highest fertility rates.
- o Qatar has the highest growth rate.
- o Sierra Leone has the lowest expectation of life at birth.
- o Sierra Leone has the highest infant mortality rate.

The projections indicate that, as a result of differentials in growth, potential future demographic situations will be somewhat different. India will catch up with China in population size, and the annual population growth of Nigeria might overtake both India's and China's (Figure 6). The crude death rates in Nigeria and other African countries will fall below those of Asian and Latin American countries by 2025 because of younger age distribution, although their relative ranks with respect to life expectancy at birth remain the same. Fertility rates will be relatively low and near replacement level in most countries, and much of the growth will be a reflection of past demographic momentum.

Consistency of the Projections

Consistency over time. The first set of Bank population projects were published in the World Development Report 1978, ten years ago. How do these and other earlier projections compare with more recent attempts? Table 6 gives a brief comparison of the results of the projections made in 1980 and 1987 for world regions and selected large countries. It shows that the global estimate made in 1987 is higher than that made in 1980 due to upward revisions for Africa and Asia. On the other hand, population totals of the Americas or Europe were revised downward.

The upward revisions in Africa were a general phenomenon; almost all countries in the Sub-Saharan region were involved in the increase. Thus the Bank's assessment of the population growth potential has been revised upward in the case of Africa during the last ten years.

The present assessment is based on the assumption that family planning will catch up soon in most of these countries and fertility will start declining before the end of the century. It is also assumed that once fertility starts declining, it will continue to decline rather rapidly. The earlier projections were revised upward because the evidence in recent years indicates that fertility decline did not begin as early as was assumed in the earlier projections. If family planning does not catch up or does not result in fertility reductions, the present projections will have to be revised upward once again.

In the case of Latin America, the fertility rate for 1985-90 is revised downward; the actual fertility decline was larger than previously projected.

In Asia, a significant revision was made in China's growth prospects. In the last few years, China's fertility has declined so fast that demographers generally believe that fertility will remain below replacement level for a long time. On that basis, it could be projected that China's population growth will be overtaken by India by the middle of the next century and the ultimate stationary population of China will be substantially smaller than India's. But recent revival in China's birth rate makes this less likely. In this projection, India and China end up with more or less the same long-term stationary population (see Figure 6).

There are upward revisions in a number of other countries also but these were more due to revisions in the 1985 total populations than in assumptions about future trends. For Burkina Faso, the 1985 population was revised upward from 6.7 to 7.9 million on the basis of new census results. In Pakistan, the base population was raised from 93.4 million to 96.2 million by the Statistical Office, with consequent changes in future population.

In general, inconsistencies between recent and past Bank projections are mainly due to revisions in base population as a result of better and newer information from censuses and surveys.

Consistency with U.N. projections. How do the Bank estimates and projections compare with the U.N. figures? Appendix Table B gives a comparison of the total population of selected countries in 1985, 2000 and 2025 according to these projections and the U.N. 1984 revision, which is the latest available.

The Bank and the U.N. make an earnest effort to coordinate their work in projections and to reduce the discrepancies as much as possible. Therefore, there should not be much difference between the two sets. Yet, some differences persist. For 28 countries out of a total of 148 countries in Appendix Table B, there was no difference at all in the 1985 total

population, and the difference was less than 1 percent in 53 other countries. Among countries with a population of 10 million or more, the difference was more than 5 percent only for Afghanistan. Thus, the difference between the Bank and the U.N. is confined to a few countries.

The reasons for persisting differences are several. The Bank revises its base data on a continuous basis, makes population estimates and projections annually and publishes the results with little delay. On the other hand, the U.N. updates its work only once every two years, and although their results are issued as computer printouts to selected organizations, the full report is published with much delay. For some countries, the two organizations have their own special reasons to follow specific population figures. For example, for Namibia the U.N. is required to use the estimate provided by the Namibia Commissioner. For Nigeria, the Bank staff felt it necessary to use the official estimate provided by the country.

Yet another source of difference is the way information regarding the degree of underenumeration (or overenumeration) in census results is treated. Usually, the U.N. estimates imply an assumption of a higher level of underenumeration than the Bank's estimates. While the Bank uses results of Post Enumeration Surveys or other direct assessments of underenumeration, it does not usually correct population totals on the basis of evaluation of age-sex distribution alone, unless the outcome of such evaluation has been accepted by national authorities. In the majority of the countries where the differences are small, the discrepancy is due to differences in the assumptions about post-censal fertility rates, mortality rates, and migration rates.

The differences in the projected totals are usually larger than those in the base population and tend to increase with the period of projection. Part of the differences in the projected populations is due to difference in the base values, and the balance due to differences in methodology and assumptions about fertility, mortality, and migration trends. An approximate analysis indicates that about a third of the variance in percent difference between the two sets of projections in 2000 is explained by the difference in base total population; differences in TFR and life expectancy at birth having only a marginal significance. For 2025 and later periods, base values become less relevant and assumptions about fertility and mortality trends become more and more important.

The methodological differences are in the use of different model life tables (the Bank uses Coale-Demeny tables while the U.N. uses U.N. and a variety of other models); different periods for which projections are made (the Bank projects from 1985 to 2150 and the U.N. projects from 1950 to 2025); and different assumptions about trends in fertility (e.g., the Bank assumes that fertility increases to replacement level in developed countries) and mortality (the Bank assumes a relatively slower increase in life expectancy at birth). But the net effect of methodological differences is not large. On the whole, differences in the Bank and the U.N. projections are essentially due to differences in the base total population.

If these are made to agree, there will be very little difference in the projections, at least for the short to medium periods.

Conclusion

World Bank population projections, published annually in its World Development Reports, and biannually in separate book form have become not only the Bank's official population figures for its sectoral, project and analytical work, but also an up-to-date source of demographic data for the international community of demographers, other social scientists, national planners, and students of population sciences. The Bank's publications in this field have some relative merits and some relative disadvantages over those of the U.N. Advantages include frequent revision and data input from Bank economists and project officers who are in constant contact with national officials. These publications also cover short-term and long-term projections prepared on the basis of the same methodology. Their main drawback is that so far the Bank publications do not include historical series to go with future series. In the coming years it is expected that historical series will also be provided in one form or another.

Table A1. Sources of Population Data

Country	Census date	Population (1000) *	Source for 1985 population
Afghanistan	Jun 79	13051 F	Bank estimate of 1980 population (15,950) based on 1979 census with nomads (15,540) 23/6/79), and excluding refugee movement to Pakistan which is assumed temporary.
Albania	Oct 60	1626 F	PVSR 7/86 (latest official estimate).
Algeria	Feb 77	16948 J	Feb 1977 census projected to 1985, using official estimate of growth rate (3.2%) for recent years.
American Samoa	Apr 80	32 J	US/BOC, 1985.
Andorra	Nov 54	6 F	PVSR 7/86.
Angola	Dec 70	5646 F	UN 1984 revision.
Anguilla	na		
Antigua and Barbuda	Feb 81	66 F	Bank estimate based on the 1984 official estimate (79) from PVSR 7/86, and growth rate of 1.3%.
Argentina	Oct 80	27947 F	CELADE printout 2/87.
Australia	Jun 81	14576 F	PVSR 7/86 (latest official estimate), de jure population.
Austria	May 81	7555 J	PVSR 7/86 (latest official estimate).
Bahamas	May 80	223 F	PVSR 7/86 (latest official estimate).
Bahrain	Apr 81	351 F	PVSR 7/86 (official estimate).
Bangladesh	Mar 81	87120 F	1981 census adjusted for underenumeration (3.3%) and projected.
Barbados	May 80	252 F	Estimated, based on 1984 official estimate (253) and 1983-84 growth rate of 0.4%.
Belgium	Mar 81	9849 J	Estimated based on 1984 official estimate (9853) and growth rate of 0.04%.
Belize	May 80	143 F	PVSR 7/86 (latest official estimate).
Benin	Mar 79	3331 F	March 1979 census projected to 1980 (3,464) and 1985, using Bank estimates of TFR and E(0).
Bermuda	May 80	68 F	UNDY, 1984 (official estimate).
Bhutan	Dec 69	1035 F	1980 population based on government estimate (reportedly based on 1980-81 census), 1985, Bank projection.
Bolivia	Sep 76	4613 F	UN 1984 revision.
Botswana	Aug 81	941 F	1981 census projected backwards to 1980, then forward to 1985, using official estimates of fertility, mortality, and migration for 1980-85 period.
Brazil	Sep 80	121149 F	UN 1984 revision.
British Virgin Islands	May 80	12 F	PVSR 4/87.
Brunei	Aug 81	193 F	PVSR 7/86 (latest official estimate).
Bulgaria	Dec 85	8948 F	PVSR 7/86 (latest official estimate).
Burkina Faso	Dec 85	7747 F	Dec 1985 census adjusted to mid-1985.
Burma	Apr 83	35314 F	April 1983 census projected to 1985, using Bank estimates of TFR and E(0).
Burundi	Aug 79	4114 F	1979 census projected forward to 1980 and to 1985.
Cameroon	Apr 76	7090 F	April 1976 census corrected for underenumeration (7.40%) and projected to 1980 and 1985.

Table A1. Sources of Population Data (cont.)

Country	Census date	Population (1000) *	Source for 1985 population
Canada	Jun 81	24343 J	PVSR 7/86 (official estimate).
Cape Verde	Jun 80	296 F	Bank estimate.
Cayman Islands	Oct 79	17 F	
Central African Rep.	Dec 75	2055 F	Dec 1975 census corrected for 11.3% underenumeration, projected to 1980 and 1985.
Chad	Dec 63	3254	UN 1984 revision.
Channel Islands	Apr 81	129 F	PVSR 7/86.
Chile	Apr 82	11330 F	PVSR 7/86 (official estimate).
China	Jul 82	1031883 F	Official estimate for 1984 year-end pop. is 1,034,750, CBR=17.5, CDR=7, GR=1.08. Mid-1985 pop. obtained by adding half year growth at the rate of 1.08 per year to year-end '84 pop.
Colombia	Oct 85	27867 J	Official estimate as reported by Bank economist.
Comoros	Sep 80	386	Mid-1980 population estimated from census total, then projected to 1985.
Congo, People's Rep.	Jan 85	1854	Feb 1974 census (1300) projected to 1985 using Bank's TFR and E(0).
Cook Islands	Dec 81	18 F	US/BOC, 1985.
Costa Rica	Jun 84	2417 J	PVSR 7/86 (official estimate).
Côte d'Ivoire	Apr 75	6710 F	April 1975 census projected to 1985 using Bank estimate of TFR and E(0).
Cuba	Sep 81	9724 F	PVSR 7/86 (official estimate).
Cyprus	Sep 76	613 J	PVSR 7/86 (official estimate).
Czechoslovakia	Nov 80	15283 J	Estimated from latest official estimate (PVSR 7/86) of population 5/31/85 (15,476) and that of 12/31/85 (15,480).
Denmark	Jan 81	5124 J	PVSR 7/86.
Djibouti	60	81 F	January 1983 census (excluding refugees in camp) projected using growth rate for 1980-1985 of 3.2%.
Dominica	Apr 81	75 F	April 1981 census projected to 1985 using growth rate of 1.32%.
Dominican Rep.	Dec 81	5648 F	CELADE printout 2/87.
Ecuador	Nov 82	8051 F	UN 1984 revision.
Egypt, Arab Rep. of	Nov 76	36626 F	1985 population obtained by projecting 1980 population (from UN 1984 revision) using growth rate of 2.53%.
El Salvador	Jun 71	3555 F	CELADE printout 2/87
Equatorial Guinea	Dec 60	246 F	Estimated, based on growth rate between 1960 census and 1982 house listing count (300).
Ethiopia	May 84	42169 F	1984 census projected forward using growth rate of 0.2%.
Faeroe Islands	Sep 77	42 J	PVSR 7/86.
Falkland Is. (Malvinas)	Dec 80	2 F	PVSR 4/87.
Fiji	Sep 76	588 F	PVSR 7/86.
Finland	Nov 80	4785 J	PVSR 7/86 (official estimate).
France	Mar 82	54335 F	PVSR 7/86 (official estimate).
French Guiana	Mar 82	73 J	UN 1985 printout.

Table A1. Sources of Population Data (cont.)

Country	Census date	Population (1000) *	Source for 1985 population
French Polynesia	Oct 83	167 F	1983 census total adjusted to mid-year and then projected to 1985 using intercensal (1977-1983) growth rate of 2.98%.
Gabon	Oct 60	449 F	Estimate based on unpublished Aug 1980 census (800) and indirect evidence of high immigration based on new primary school entrants for 1980 to 1985.
Gambia, The	Apr 83	696 F	June 1983 census projected to 1985 using a growth rate of 3.3%.
Gaza Strip	Sep 67	356 F	Bank estimate, based on projection.
German Democratic Rep.	Dec 81	16706 J	PVSR 7/86 (official estimate).
Germany, Federal Rep. of	May 70	60651 J	PVSR 7/86 (latest official estimate).
Ghana	Mar 84	12206 F	March 1984 census (12,205) and growth rate of 3.2%.
Gibraltar	Nov 81	30 F	PVSR 7/86 (official estimate).
Greece	Apr 81	9740 F	PVSR 7/86 (official estimate).
Greenland	Oct 76	50 J	PVSR 7/86 (official estimate).
Grenada	Apr 81	89 F	Provided by Bank economist. Pop.1983 was obtained, using growth rate of 1.97% from 1983 figure.
Guadeloupe	Mar 82	327 J	UN 1985 Assessment.
Guam	Apr 80	106 J	1984 official estimate (PVSR 7/86) projected to 1985 using average growth rate of 2.87% for period 1980-84.
Guatemala	Mar 81	6054 J	PVSR 7/86 (official estimate).
Guinea	Feb 83	5781 F	1983 census projected using growth rate of 2.33 (UN 1984 revision).
Guinea-Bissau	Apr 79	768 F	April 1979 census, projected to 1985 using vital rates of Guinea.
Guyana	May 80	758 F	PVSR 7/86 (official estimate).
Haiti	Aug 82	5054 J	CELADE printout 2/87.
Holy See	Apr 48	1 F	PVSR 7/86.
Honduras	Mar 74	2657 J	CELADE printout 2/87.
Hong Kong	Mar 81	4987 F	PVSR 7/86 (official estimate).
Hungary	Jan 80	10709 F	PVSR 7/86.
Iceland	Dec 80	204 J	PVSR 7/86 (official estimate).
India	Mar 81	685185 F	1981 census with official correction for underenumeration, projected to 1985 using Bank estimate of fertility and mortality.
Indonesia	Oct 80	147490 F	Oct 1980 census (not adjusted for undercount) projected to 1985.
Iran, Islamic Rep. of	Nov 76	33709 F	UN 1984 revision.
Iraq	Oct 77	12000 F	UN 1984 revision.
Ireland	Apr 81	3443 F	PVSR 4/87 (official estimate).
Isle of Man	Apr 86	64 J	PVSR 7/86.
Israel	Jun 83	4038 J	PVSR 7/86 (official estimate).
Italy	Oct 81	56557 F	PVSR 7/86 (official estimate).
Jamaica	Jun 82	2206 F	1980 population (official estimate) projected to 1985.
Japan	Oct 80	117060 F	PVSR 7/86 (official estimate).

Table A1. Sources of Population Data (cont.)

Country	Census date	Population (1000) *	Source for 1985 population
Johnston Island	Apr 70	1 F	PVSR 6/86.
Jordan	Nov 79	2133 F	Census includes only the population of East Bank. 1980 population (UN, 1984 revision) projected with new migration and TFR.
Kampuchea, Democratic	Apr 62	5729 F	1980 population (UN 1984 revision) projected to 1985.
Kenya	Aug 79	15327 F	August 1979 census (adjusted for 5% undercount of children) projected to 1980 and 1985).
Kiribati	May 85	64 F	PVSR 4/87 (official estimate).
Korea, Dem. People's Rep.	May 44	na F	1980 population (UN 1984 revision) projected using UN TFR and E(0) for 1980-85.
Korea, Rep. of	Nov 80	37436 F	PVSR 7/86 (official estimate).
Kuwait	Apr 85	1697 F	Based on census using growth rate of 4.4%.
Lao, People's Dem. Rep.	Mar 85	3585 F	1985 census projected using a growth rate of 2.0% for the 4-month period after census date because of migration.
Lebanon	Nov 70	2126 F	UN 1984 revision.
Lesotho	Sep 76	1217	April 1986 census (1,578) projected backwards to mid-1985.
Liberia	Feb 84	2102 F	Feb 1974 census (1504) projected to 1985 using a growth rate of 3.35%.
Libya	Jul 84	3637 J	July 1984 census projected to 1985, using a growth rate of 3.86% (UN 1984 revision).
Liechtenstein	Dec 81	26 F	PVSR 7/86.
Luxembourg	Mar 81	365 J	PVSR 7/86 (official estimate).
Macao	Mar 81	242 J	PVSR 7/86 (official estimate).
Madagascar	74-75	7604 F	1974/75 census projected using fertility and mortality estimates from the Budget Survey.
Malawi	Sep 77	5547 F	Nov 1977 census projected to 1985.
Malaysia	Jun 80	13183 F	1980 population (UN 1984 revision) projected using Bank estimates of fertility and mortality.
Maldives	Mar 85	181 F	1985 census projected to mid-year using intercensal growth rate of 3.3%.
Mali	Dec 76	6395 F	Dec 1976 census projected backwards to 1975, then forward to 1980, and 1985.
Malta	Nov 67	316 F	Bank estimate based on official estimate of 360 for 1982 and very significant net emigration rate.
Martinique	Mar 82	327 J	PVSR 7/86 (official estimate).
Mauritania	Dec 76	1420	1976 census (included 539,000 nomads, but excluded 67,000 "transhumants", who are "l'etrangers" but Mauritanian nationality) projected, using Bank estimates of TFR and E(0).
Mauritius	Dec 83	1000	PVSR 4/87 (official estimate).
Mexico	Jun 80	66847 J	1980 population (UN 1984 revision) projected to 1985.
Midway Islands	Apr 70	2 F	PVSR 7/86.
Monaco	Mar 82	27 J	PVSR 7/86.

Table A1. Sources of Population Data (cont.)

Country	Census date	Population (1000) *	Source for 1985 population
Mongolia	Jan 79	1595 F	PVSR 7/86 (official estimate).
Montserrat	May 80	12 F	UN 1984.
Morocco	Sep 82	20420 F	Sept 1982 census projected to 1985.
Mozambique	Aug 80	11674	Aug 1980 census (adjusted for 4% underenumeration) projected backwards to mid-1985 using a growth rate of 2.6%, then forward to 1985.
Namibia	May 70	762	1981 census projected backwards to mid-1980 and then forward to 1985.
Nauru	Jan 77	7 F	PVSR 1/87.
Nepal	Jun 81	15023 J	June 1981 census projected to 1985 using Bank estimates of TFR and E(0).
Netherlands Antilles	Feb 81	172 J	Bank estimate.
Netherlands, The	Feb 71	13060 J	PVSR 7/86 (official estimate).
New Caledonia	Apr 83	145 F	1983 census projected using intercensal growth rate of 1.25%.
New Zealand	Mar 81	3176 F	PVSR 7/86 (latest official estimate).
Nicaragua	Apr 71	1878 J	UN 1984 revision.
Niger	Nov 77	5098 O	Nov. 1977 census projected to 1980 and to 1985.
Nigeria	Nov 63	55670 F	Bank projection based on official government data.
Niue	Sep 76	4 F	PVSR 4/87 (latest official estimate).
Norway	Nov 80	4091 J	PVSR 7/86 (official estimate).
Oman	Jun 81	15023 F	UN 1984 revision.
Pacific Is., Trust Terri.	Sep 80	133 J	Pop 1933 (PVSR 1/87) projected to 1985 using growth rate of 2.2% (US/BOC, 1985).
Pakistan	Mar 81	84254 F	Federal Bureau of Statistics.
Panama	May 80	1825 F	UN 1984 revision.
Papua New Guinea	Sep 80	3011 F	UN 1984 revision.
Paraguay	Jul 82	3035 F	CELADE printout 2/87.
Peru	Jul 81	17005 F	Bank estimate using growth rate of 2.3% (from Census data) and Bank estimates of TFR and E(0).
Philippines	May 80	48098 J	Based on 1980 population, using Bank estimate of TFR and E(0) and net emigration of 250,000.
Pitcairn Island	Dec 85	.. F	PVSR 1/87.
Poland	Dec 78	35061 J	Statistical Year Book, Government of Poland.
Portugal	Mar 81	9833 F	PVSR 7/86 (official estimate).
Puerto Rico	Apr 80	3197 F	Estimated, using the average growth rate of 1980-84 (PVSR 7/84; 4/85; 7/86).
Qatar	May 70	111	PVSR 4/87 (estimate).
Reunion	Mar 82	516 J	March 1982 census projected using a growth rate of 1.04%.
Romania	Jan 77	21560 F	Estimated from 1984 official figure of 22,625 (PVSR 7/86) plus natural increase for one year (117,000) and net emigration for one year (200).
Rwanda	Aug 78	4800 J	Based on 1970 survey and Aug 1978 census.
San Marino	Nov 76	19 F	PVSR 7/86.

Table A1. Sources of Population Data (cont.)

Country	Census date	Population (1000) *	Source for 1985 population
Sao Tomé and Príncipe	Sep 70	73811 F	PVSR 1/87.
Saudi Arabia	Sep 74	7013 F	UN 1984 revision.
Senegal	Sep 76	4908 F	Situation Economique du Senegal, 1985.
Seychelles	Aug 77	61898 F	PVSR 4/87.
Sierra Leone	Dec 85	3516 F	Census adjusted for 5% underenumeration and projected backwards.
Singapore	Jun 80	2414 F	PVSR 7/87 (official estimate).
Solomon Islands	Feb 76	197 F	US/BOC, 1985.
Somalia	Feb 75	3253 F	1975 census inflated by 20% (Govt. estimate) for underenumeration and projected to 1980 and 1985 (growth rate 1975-80=2.6% and 1980-85=2.8%)
South Africa	May 80	25017	May 1980 census increased to 28,544 to cover excluded areas and underenumeration, then projected to 1985 using growth rate of 2.51%.
Spain	Mar 81	37746 F	PVSR 7/86 (latest official estimate).
Sri Lanka	Mar 81	14847 F	PVSR 7/86 (official estimate).
St. Helena	Oct 76	5 J	PVSR 4/87.
St. Kitts and Nevis	May 80	44 F	Statistics Office, Planning Unit (official estimate).
St. Lucia	May 80	115 F	1984 population (official estimated from economist) projected using 1983-84 growth rate of 2.0%.
St. Pierre and Miquelon	Mar 82	6 F	PVSR 4/87.
St. Vincent	May 80	98 F	Estimated using 1983 population (Report No. 5241-STV, 1984) and growth rate of 1.2%.
Sudan	Feb 83	20564 F	Feb 1983 census projected to mid 1985, using a Bank estimated growth rate of 2.71%.
Suriname	Jul 80	352 F	UN 1984 revision.
Swaziland	Aug 76	6366 F	PHN Sector Report 1984.
Sweden	Sep 80	8320 J	PVSR 7/86 (official estimate).
Switzerland	Dec 80	6366 J	Estimated from official 1984 population, 6442 (PVSR 7/86) by adding natural increase for one year.
Syrian Arab Rep.	Sep 81	9053 F	1980 population estimated from census using growth rate of 3.54% (UN). 1985 population projected from 1980.
Taiwan	Dec 80	17969 F	Based on 1980 census and projected (official 1981 CBR = 23, CDR = 4.8).
Tanzania	Aug 78	17513 F	Aug 1978 census projected to 1980 and 1985.
Thailand	Apr 80	44825 J	Population and Manpower Planning Division (Bank Report No. 6036-TH, Vol 3, 1986).
Togo	Nov 81	2705 F	Nov 1981 census projected to 1985.
Tokelau	Oct 82	2 F	PVSR 1/87.
Tonga	Nov 76	90 J	PVSR 4/87 (official estimate).
Trinidad and Tobago	May 80	1080 F	UN 1984 revision.
Tunisia	Mar 84	6966 F	March 1984 census projected to 1985 using growth rate of 2.39%.
Turkey	Oct 80	44737 F	Based on 1985 census.
Turks and Caicos Is.	May 80	7 F	PVSR 4/87.

Table A1. Sources of Population Data (cont.)

Country	Census date	Population (1000) *	Source for 1985 population
Tuvalu	May 79	7 F	PVSR 1/87.
Uganda	Jan 80	12637 F	Official estimate as reported by economist.
United Arab Emirates	Dec 80	1043 F	Dec 1980 census projected to 1985 using growth rate of 6.04%.
United Kingdom	Apr 81	55678 F	Estimated from official 1984 figure (56,488) by adding natural increase for one year (PVSR 7/86).
United States of America	Apr 80	226546 F	PVSR 7/86 (official estimate).
Uruguay	Oct 85	2931 F	CELADE printout 2/87.
USSR	Jan 79	262436 F	1984 population (PVSR 7/86, latest official data) projected, adding natural increase and subtracting 6000 migrants.
Vanuatu	Jan 79	111 F	Bank projection.
Venezuela	Oct 81	14517 F	UN 1984 revision.
Viet Nam	Oct 79	52742 F	1980 population estimated from adjusted census total (53,248), and projected to 1985.
Virgin Islands (US)	Apr 80	97 J	US/BOC, 1985.
Wake Island	Apr 70	2 F	PVSR 1/87.
Wallis and Futuna	Mar 69	9 F	US/BOC, 1985.
Western Sahara	Dec 70	76 F	PVSR 4/87.
Western Samoa	Nov 81	156 F	US/BOC, 1985
Yemen, Arab Rep. of	Feb 86	9274 F	Bank estimate based on official 1980 mid-year estimate projected using growth rate of 2.45%.
Yemen, People's Dem. Rep.	May 73	1590 J	Bank estimate based on unofficial results of the Agricultural Survey.
Yugoslavia	Mar 81	22425 J	PVSR 7/86 (official estimate).
Zaire	Jul 84	29671 F	July 1984 census projected using growth rate of 2.94%.
Zambia	Sep 80	5680 F	Central Statistical Office.
Zimbabwe	Aug 82	7550 F	Bank estimate, based on Aug 1982 census.

* Nature of estimate: de jure (J) or de facto (F).

.. Less than 500 people.

Table A2. Sources of Fertility Data

Country	Source
Afghanistan	Bank estimate
Albania	1980-85 based on official vital statistics, but adjusted to coincide with observed growth rate, 1985-90 Bank projection.
Algeria	1980-1985 from UN 1984 revision, 1985-90 Bank projection.
American Samoa	Bank estimate.
Andorra	Bank estimate.
Angola	Bank estimate.
Anguilla	Bank estimate.
Antigua and Barbuda	1980-85 derived from CBR = 15 (PVSR 7/86), 1985-90 Bank projection.
Argentina	1980-85 from 1984 revision, 1985-90 Bank projection.
Australia	PVSR 7/86 (latest official estimate).
Austria	Derived from official estimate of CBR = 11.5 for 1985 and adjusted to produce the given growth rate.
Bahamas	Derived from official birth rate of 23.2 for 1985 (PVSR 7/86).
Bahrain	1980-85 from UN 1984 revision, 1985-90 Bank projection.
Bangladesh	Bank estimate based on different survey results (Census Analytical Report) and contraceptive prevalence rate.
Barbados	1980-85 from UN 1984 revision, 1985-90 Bank projection.
Belgium	Derived from CBR = 11.5 for 1985 (PVSR 7/86).
Belize	Derived from CBR = 38 for 1985 (US/BOC, 1985).
Benin	Estimated from World Fertility Survey (1979).
Bermuda	Bank estimate.
Bhutan	Same as Nepal: provides the observed growth rates.
Bolivia	UN 1984 revision. Small difference in 1985 is due to difference in methodology.
Botswana	Estimated from official data (Statistical Bulletin, March 1985, CSO, Botswana).
Brazil	1980-85 from UN 1984 revision, 1985-90 Bank projection.
British Virgin Islands	Bank estimate.
Brunei	Estimated, using a reported CBR of 29.8 for 1985.
Bulgaria	Estimated from reported CBR = 13.2 for 1985 (PVSR 7/86) and CBR = 13.98 for 1980-84.
Burkina Faso	Bank source (SSA Background Paper).
Burma	For 1980-1985 from UN 1984 revision, 1985-1990 Bank projection.
Burundi	Bank estimate (SSA Background Paper) using national survey results (1965, 70/71, 79 census, 79 post-censal demographic survey).
Cameroon	TFR of 6.5 for 1975-80 and 1980-85 from World Fertility Survey, assumed to increase to 6.75 during 1985-90 due to reduction in sterility.
Canada	Official estimate. (UNDY 1984).
Cape Verde	Bank estimate based on CBR given by government.
Cayman Islands	Bank estimate.
Central African Rep.	Bank estimate (SSA Background Paper).
Chad	UN 1984 revision.
Channel Islands	Estimated using CBR = 11.9 for 1985 (PVSR 7/86).
Chile	UN 1984 with slight adjustment for official estimate of CBR.
China	Estimated, using CBR of 19.3.

Equatorial Guinea	UN assessment, 1985.
Ethiopia	From pre-famine UN estimate.
Faeroe Islands	Bank estimate.
Falkland Is. (Malvinas)	Bank estimate.
Fiji	Derived from CBR = 28.4 for 1984 (UNDY 1984).
Finland	Derived from CBR = 13.3 (1984).
France	Derived from CBR = 13.9 for 1985 (PVSR 7/86).
French Guiana	Bank estimate.
French Polynesia	Derived from CBRs = 30.2 for 1984 (PVSR 1/87) and 29 for 1985 (US/BOG, 1985).
Gabon	Bank estimate (SSA Background Paper).
Gambia, The	Bank estimate (SSA Background Paper).
Gaza Strip	UN 1984 revision.
German Democratic Republic	Derived from CBR = 13.7 (1985).
Germany, Federal Republic	Derived from CBR = 9.6 (1985).
Ghana	1980-85 from UN 1984 revision, assuming declining fertility during 1985-90.
Gibraltar	Bank estimate.
Greece	Derived from CBR = 11.7 (1985).
Greenland	Bank estimate.
Grenada	Figures interpolated, using 1980-85 and 1985-90 figures from 1985 World Population Projections.
Guadeloupe	UN 1984 revision.
Guam	Estimated to get desired CBR.
Guatemala	1980-85 UN 1984 revision, 1985-90 Bank projections.
Guinea	UN 1984 revision.
Guinea-Bissau	Same as Guinea
Guyana	UN 1984 revision.
Haiti	CELADE printout 2/87.
Holy See	Bank estimate.

Table A2. Sources of Fertility Data (cont.)

Country	Source
Honduras	CELADE printout 2/87.
Hong Kong	Estimated with CBR = 16.0.
Hungary	Derived from CBR = 11.7 (1985).
Iceland	Derived from CBR = 15.9 (1985).
India	Adjusted SRS rate (World Bank staff working paper No.699).
Indonesia	Bank estimate based on census age data, TFR and contraceptive prevalence rate from a sample survey.
Iran, Islamic Republic	UN 1984 revision.
Iraq	UN 1984 revision.
Ireland	Derived from CBR = 17.5, 1985 (PVSR 7/86).
Isle of Man	Bank estimate.
Israel	Estimated, based on official vital statistics.
Italy	Derived from CBR = 10.1 for 1985 (PVSR 7/86).
Jamaica	Derived from CBR = 24.3 for 1985 (from economist).
Japan	Estimated from reported CBR of 12.9 for 1980-85.
Johnston Island	Bank estimate.
Jordan	Based on World Fertility Survey (1976 TFR=7.7) Demographic Survey (1981 TFR=7.1), Manpower Survey (1982 TFR=6.6) and Family Health Survey (1983 TFR=6.6).
Kampuchea, Democratic	UN assessment, 1984.
Kenya	1980-85 based on various national surveys, 1985-90 Bank projection, assuming same recent decline in fertility.
Kiribati	Estimated from CBR = 34 for 1985 (US/BOC, 1985).
Korea, Dem. People's Rep.	UN 1984 assessment.
Korea, Rep. of	UN 1984 assessment.
Kuwait	Derived from official CBR = 35.55 (1980-85).
Lao People's Dem. Republic	Bank estimate.
Lebanon	UN 1984 assessment.
Lesotho	From 1977 World Fertility Survey, assuming a very small decrease for 1985-90.
Liberia	UN 1984 revision.
Libya	UN 1984 revision.
Liechtenstein	Bank estimate.
Luxembourg	Derived from CBR = 11.1 (1985).
Macao	Derived from CBR = 23 for 1985 (US/BOC, 1985).
Madagascar	Bank estimate based on 1980 survey.
Malawi	Based on information from 1977 census Analytical Report
Malaysia	1980-85 UN 1984 revision, adjusted slightly for migration, 1985-90 Bank projection.
Maldives	Bank estimate.
Mali	Bank estimate (SSA Background Paper, based on 1960/61 survey and 1976 census age data).
Malta	Derived from CBR = 14.2 (1985).
Martinique	1980-85 from UN assessment, 1985, 1985-90 adjusted to get desired CBR.
Mauritania	Bank estimate (SSA Background Paper based on 1965 survey and 1957 survey of Fonta Zore region).

Table A2. Sources of Fertility Data (cont.)

Country	Source
Mauritius	Estimated using the official CBR = 19 for 1985.
Mexico	1980-85 from UN 1984 revision, 1985-90 Bank projection.
Midway Islands	Bank estimate.
Monaco	Bank estimate.
Mongolia	UN 1984 revision.
Montserrat	Bank estimate.
Morocco	1980-85 from UN 1984 revision, 1985-90, bank projection.
Mozambique	Estimated to get specific growth rate.
Namibia	UN 1984 revision.
Nauru	Bank estimate.
Nepal	1980-85 from UN 1984 assessment, Bank projection for 1985-90.
Netherlands Antilles	Based on 1985 estimate of CBR from US/BOC, 1985.
Netherlands, The	Derived from CBR = 12.1 for 1985 (PVSR 7/86).
New Caledonia	1980-85 from PVSR, 1984 special supplement, Bank projection for 1985-90.
New Zealand	Derived from CBR = 15.9 (PVSR 7/86).
Nicaragua	1980-85 from UN 1984 revision. 1985-90 Bank projection.
Niger	Bank estimate (SSABP based on 1959/60 survey and 1977 census age data).
Nigeria	Official estimate (from economist).
Niue	Bank estimate.
Norway	Derived from CBR = 12.4 for 1985 (PVSR 7/86).
Oman	UN 1984 revision.
Pacific Is., Trust Terr.	1980-85 based on US/BOC sources, 1985-90 Bank projection.
Pakistan	World Fertility Survey for 1980-85, assuming low decline for 1985-90.
Panama	1980-85 UN 1984 revision, 1985-90 Bank projection.
Papua New Guinea	UN 1984 revision.
Paraguay	CELADE printout 2/87
Peru	1980-85 Bank estimate, 1985-90 Bank projection.
Philippines	Bank estimate based on National Demographic Survey (1983).
Pitcairn Island	Bank estimate.
Poland	Derived from CBR = 18.2, 1985 (PVSR 7/86).
Portugal	Derived from CBR = 12.3, 1985 (PVSR 7/86).
Puerto Rico	1980-85 from PVSR (1984 special supplement), 1985-90 Bank projection).
Qatar	UN 1984 revision.
Reunion	Based on official data.
Romania	Derived from CBR = 15.5, 1984 (PVSR 7/86).
Rwanda	Bank estimate (SSA Background Paper).
San Marino	Bank estimate.
Sao Tomé and Principe	1980-85 estimated from CBR = 38.7 for 1980-85 (PVSR, 1984 special supplement) 1985-90 Bank projection.
Saudi Arabia	1980-85 UN 1984 revision. 1985-90 Bank projection.
Senegal	Bank estimate, average of 1978 World Fertility Survey fertility rate (7.15) and 1970-71 survey rate (6.16).
Seychelles	1980-85 estimated from CBRs (PVSR 1984 Special Supplement and PVSR 1985-87).
Sierra Leone	Based on 1974 census data.
Singapore	Based on official estimate of birth rate.
Solomon Islands	US/BOC, 1985.

Table A2. Sources of Fertility Data (cont.)

Country	Source
Somalia	Bank estimate (SSA Background Paper).
South Africa	UN 1984 revision.
Spain	Derived from CBR = 12.5 (1983).
Sri Lanka	Official estimate.
St. Helena	Bank estimate.
St. Kitts and Nevis	Based on official data (Statistics Office, Planning Unit , and ECCM Secretariat).
St. Lucia	Based on official data (Government Statistical Office and DECS).
St. Pierre and Miquelon	Bank estimate.
St. Vincent	1980-85 from Bank report (No. 5241 - STV, 1984) 1985-90 Bank projection.
Sudan	1980-85 from the UN 1984 revision. 1985-90, Bank projection.
Suriname	UN 1982 revision.
Swaziland	Bank estimate.
Sweden	Derived from CBR = 11.8, 1985 (PVSR 7/86).
Switzerland	Derived from CBR = 11.6 (PVSR 7/86).
Syrian Arab Republic	1980-85 UN 1984 revision. 1985-90 Bank projection.
Taiwan	Derived from CBR = 19.0 (US/BOC, 1985).
Tanzania	Bank estimate (SSA Bank paper).
Thailand	1980-85 official estimate (NESDB, Thailand), TFR 1985-90 adjusted upward to get $r = 1.95\%$.
Togo	Estimated from 1961 and 1971 census data.
Tokelau	Bank estimate.
Tonga	1980-85 based on CBR, 1985-90 Bank projection.
Trinidad and Tobago	1980-85 from UN 1984 revision, Bank projection for 1985-90.
Tunisia	1980-85 from the UN 1984 revision, Bank projection for 1985-90.
Turkey	1980-85 from UN 1983 revision, 1985-90 Bank projection.
Turks and Caicos Is.	Bank estimate.
Tuvalu	Bank estimate.
Uganda	Bank estimates, based on the population growth rate of 3%.
United Arab Emirates	1980-85 UN 1984 revision, 1985-90 Bank projections.
United Kingdom	Derived from CBR = 12.9.
United States of America	TFR 1981-84 from UN/BOC 1985, #980. CBR 1985 from PVSR 7/1986 (official).
Uruguay	1980-85 from CELADE printout 2/87, 1985-90 Bank projection.
USSR	Bank estimate based on official CBR.
Vanuatu	Bank estimate.
Venezuela	1980-85 from UN 1984 revision, Bank projection for 1985-90.
Viet Nam	Bank estimate for 1980-85 and then projected to 1985-90.
Virgin Islands (US)	Derived from CBR = 25 for 1985 (US/BOC, 1985).
Wake Island	Bank estimate.
Wallis and Futuna	Bank estimate.
Western Sahara	Bank estimate.
Western Samoa	US/BOC, 1985.
Yemen, Arab Republic	Based on World Fertility Survey.
Yemen, People's Dem. Rep.	Bank estimate to reconcile with population growth rates and rates in neighboring states.
Yugoslavia	Derived from CBR = 15.9 for 1985 (PVSR 7/86).

Table A2. Sources of Fertility Data (cont.)

Country	Source
Zaire	UN 1984 revision.
Zambia	1980-85 Bank estimate (PHN Sector Report, Oct., 1983), 1985-90 Bank projection.
Zimbabwe	Bank estimate based on past rates and recent CPR of 26%.

For notes and abbreviations, see Table A1.

Table A3. Sources of Mortality Data

Country	Source
Afghanistan	Bank estimate
Albania	1980-85 based on official vital statistics, but adjusted to coincide with observed growth rate, 1985-90 Bank projection.
Algeria	1980-85 from UN 1984 revision, 1985-90 Bank projection.
American Samoa	Bank estimate.
Andorra	Bank estimate.
Angola	Bank estimate.
Anguilla	Bank estimate.
Antigua and Barbuda	1980-85 derived from CDR = 5.2 (PVSR 7/86), 1985-90 Bank projection.
Argentina	1980-85 from UN 1984 revision, 1985-90 Bank projection.
Australia	PVSR 7/86 (latest official estimate).
Austria	Derived from official estimate of CDR = 11.8 for 1985, and adjusted to produce the given growth rate.
Bahamas	Derived from official CDR of 5.6 for 1985 (PVSR 4/87).
Bahrain	1980-85 from UN 1984 revision, 1985-90 Bank projection.
Bangladesh	Bank estimate with adjustment of survival ratio, and using the M:F ratio from Census Analytical Report.
Barbados	1980-85 from UN 1984 revision, 1985-90 Bank projection.
Belgium	Derived from CDR = 11.2, 1985 (PVSR 7/86).
Belize	Derived from CDR = 7 for 1985 (US/BOC, 1985).
Benin	Estimated from child survival data from WFS (1979).
Bermuda	Bank estimate.
Bhutan	Estimated from rough estimate of CDR of 21 for 1980-85.
Bolivia	UN 1984 revision. Small difference in 1985 is due to difference in methodology.
Botswana	Estimated from official data (Statistical Bulletin, March 1985, CSO, Botswana).
Brazil	1980-85 from UN revision, 1985-90 Bank projection.
British Virgin Islands	Bank estimate.
Brunei	Estimated, using a reported CDR of 3.9 for 1985.
Bulgaria	Estimated from CDR = 12.0 for 1985 (PVSR 7/86) and CDR = 11.23 for 1980-84.
Burkina Faso	Bank Source (SSA Background Paper).
Burma	1980-85 from UN 1984 revision, 1985-90, Bank projection.
Burundi	Bank estimate (SSA Background Paper).
Cameroon	Bank estimate based on WFS Child survival rates.
Canada	Official estimate. (UNDY, 1984).
Cape Verde	Bank estimate based on CDR given by government.
Cayman Islands	Bank estimate.
Central African Rep.	Estimated from child survival data in the 1975 census.
Chad	UN 1984 revision.
Channel Islands	Estimated, using CDR = 11.4 for 1985 (PVSR 7/86).
Chile	UN 1984 revision with slight adjustment for official estimate of CDR.
China	Estimated, using CDR of 6.6.
Colombia	From economist.
Comoros	PHN sector report.
Congo, People's Rep.	Bank estimate (SSA Background Paper).

Table A3. Sources of Mortality Data (cont.)

Country	Source
Cook Islands	Bank estimate.
Costa Rica	1980-85 UN 1984 revision, 1985-90 Bank projections.
Côte d'Ivoire	Bank estimate (Sector Report).
Cuba	UN 1984 revision.
Cyprus	UN 1984 revision.
Czechoslovakia	Derived from CDR = 11.8 (1985).
Denmark	Derived from CDR = 11.2.
Djibouti	Ethiopian rates used.
Dominica	1980-85 based on information given to economist by MOH, 1985-90 Bank projection.
Dominican Republic	CELADE printout 2/87.
Ecuador	1980-85 data from 1984 UN revision. 1985-90 Bank projection.
Egypt, Arab Republic	Based on official CDR.
El Salvador	CELADE printout 2/87.
Equatorial Guinea	UN assessment, 1984.
Ethiopia	Bank estimate, sector report.
Faeroe Islands	Bank estimate.
Falkland Is. (Malvinas)	Bank estimate.
Fiji	Bank estimate.
Finland	Derived from CDR = 9.2 for 1984.
France	Derived from CDR = 10.1 for 1985 (PVSR 7/86).
French Guiana	Bank estimate.
French Polynesia	Derived from CDRs = 5.2 for 1984 (PVSR 1/87) and 5.0 for 1985 (US/BOC, 1985).
Gabon	Bank estimate (SSA Background Paper).
Gambia, The	Bank estimate (SSA Background Paper).
Gaza Strip	UN 1984 revision.
German Democratic Rep.	Derived from CDR = 13.57 for 1985.
Germany, Federal Rep.	Derived from CDR = 11.5 for 1985.
Ghana	UN 1984 revision.
Gibraltar	Bank estimate.
Greece	Derived from CDR = 9.3 (1985).
Greenland	Bank estimate.
Grenada	Figures interpolated, using 1980-85 and 1985-90 figures from 1985 World Population Projections.
Guadeloupe	UN 1984 revision.
Guam	Estimated to get desired CDR.
Guatemala	1980-85 UN 1984 revision, 1985-90 Bank projections.
Guinea	UN 1984 revision.
Guinea-Bissau	Same as Guinea.
Guyana	UN 1984 revision.
Haiti	CELADE printout 2/87.
Holy See	Bank estimate.
Honduras	CELADE printout 2/87.
Hong Kong	Estimated from CDR = 4.9.
Hungary	Derived from CDR = 13.7 (1985).

Table A3. Sources of Mortality Data (cont.)

Country	Source
Iceland	Derived from CDR = 7.1 (1985).
India	Adjusted SRS rate.
Indonesia	Based on census.
Iran, Islamic Republic	UN 1984 revision.
Iraq	UN 1984 revision.
Ireland	Derived from CDR = 9.0, 1985 (PVSR 7/86).
Isle of Man	Bank estimate.
Israel	Estimated, based on official statistics.
Italy	Derived from CDR = 9.5 for 1985, (PVSR 7/85).
Jamaica	UN assessment, 1984.
Japan	Estimated on the basis of reported CDR = 6.2 for 1980-85.
Johnston Island	Bank estimate.
Jordan	UN 1984 revision.
Kampuchea, Democratic	UN assessment, 1984.
Kenya	1980-85 based on various national surveys and 1985-90 Bank projection, assuming smooth future increase.
Kiribati	Estimated from CDR = 14 for 1985 (US/BOC, 1985).
Korea, Dem. People's Rep.	UN 1984 revision.
Korea, Rep. of	UN 1984 revision.
Kuwait	Derived from official CDR = 3.2 (1980-84).
Lao People's Dem. Rep.	Bank estimate.
Lebanon	UN 1984 assessment.
Lesotho	From 1977 WFS, E(0) assumed to increase at normal rate.
Liberia	UN 1984 revision.
Libya	UN 1984 revision.
Liechtenstein	Bank estimate.
Luxembourg	Derived from CDR = 10.8 (1985).
Macao	Derived from CDR = 6 for 1985 (US/BGC, 1985).
Madagascar	Bank estimate using 1980 and 1984 surveys.
Malawi	Bank estimate using 1977 census data (SSA Background Paper).
Malaysia	1980-85 UN 1984 revision, 1985-90 Bank projection.
Maldives	Bank estimate.
Mali	Bank estimate (SSA Background Paper, using 1960/61 survey and 1976 census age data).
Malta	Derived from CDR = 7.4 (1985).
Martinique	1980-85 UN assessment, 1985. 1985-90 Bank projection.
Mauritania	Bank estimate (SSA Background Paper based on 1965 survey).
Mauritius	Estimated using official CDR = 6.8 for 1985.
Mexico	1980-85 CELADE printout 2/87, 1985-90 Bank projection.
Midway Islands	Bank estimate.
Monaco	Bank estimate.
Mongolia	UN 1984 revision.
Montserrat	Bank estimate.
Morocco	1980-85 UN 1984 revision, 1985-90 bank projection.
Mozambique	UN 1984 revision.
Namibia	UN 1984 revision.

Table A3. Sources of Mortality Data (cont.)

Country	Source
Nauru	Bank estimate.
Nepal	1980-85 UN 1984 revision, 1985-90 Bank projection.
Netherlands Antilles	Based on 1985 estimate of CDR from US/BOC, 1985.
Netherlands, The	Derived from CDR = 8.5, 1985 (PVSR 7/86).
New Caledonia	1980-85 from PVSR, 1984 special supplement, 1985-90 from Bank projections.
New Zealand	Derived from CDR = 8.4 (PVSR 7/86, latest official).
Nicaragua	1980-85 UN 1984 revision, 1985-90 Bank projection.
Niger	UN 1984 revision.
Nigeria	From the UN Population Division (1983 printout).
Niue	Bank estimate.
Norway	Derived from CDR = 10.6, 1985 (PVSR 7/86).
Oman	UN 1984 revision.
Pacific Is., Trust Terr.	1980-85 based on US/BOC sources, 1980-85 Bank projection.
Pakistan	1980-85 UN 1984 revision, 1985-90 Bank projection.
Panama	1980-85 UN 1984 revision, 1985-90 Bank projection.
Papua New Guinea	UN 1984 revision.
Paraguay	CELADE printout 2/87.
Peru	1980-85 Bank estimate 1985-90, Bank projection.
Philippines	Bank estimate based on National Demographic Survey (1983).
Pitcairn Island	Bank estimate.
Poland	Derived from CDR = 10.3 for 1985 (PVSR 7/86).
Portugal	Derived from CDR = 9.6 for 1985 (PVSR 7/86).
Puerto Rico	1980-85 from PVSR 1984 (special supplement), 1985-90 Bank projection.
Qatar	UN 1984 revision.
Reunion	Based on official data.
Romania	Derived from CDR = 10.3 for 1984 (PVSR 7/86).
Rwanda	UN 1984 revision.
San Marino	Bank estimate.
Sao Tomé and Príncipe	1980-85 estimated from CDR = 10.2 for 1980-85 (PVSR 1984 special supplement) 1985-90 Bank projection.
Saudi Arabia	1980-85 UN 1984 revision, 1985-90 Bank projection.
Senegal	Estimated from WFS, 1978.
Seychelles	Estimated from CDRs (PVSR 1984 special supplement and 1985-87).
Sierra Leone	From 1974 census child survival data.
Singapore	Based on official estimate of death rate.
Solomon Islands	US/BOC, 1985
Somalia	Bank estimate (SSA Background Paper).
South Africa	UN 1984 revision.
Spain	Derived from CDR = 7.8 for 1983.
Sri Lanka	Official estimate.
St. Helena	Bank estimate.
St. Kitts and Nevis	Based on official data (Statistics Office, Planning Unit, and ECCM Secretariat).
St. Lucia	Based on official data (Government Statistical Office and DECS).
St. Pierre and Miquelon	Bank estimate.
St. Vincent	1980-85 from Bank report (No. 5241-STV, 1984), 1985-90 Bank projection.

Table A3. Sources of Mortality Data (cont.)

Country	Source
Sudan	1980-85 UN 1984 revision, 1985-90 Bank projection.
Suriname	Estimated from official CDR.
Swaziland	Bank estimate.
Sweden	Derived from CDR = 11.3, 1985 (PVSR 7/86).
Switzerland	Derived from CDR = 9.1 (PVSR 7/86).
Syrian Arab Republic	1980-85 UN 1984 revision, 1985-90 Bank projection.
Taiwan	Derived from CDR = 5.0, 1985. (US/BOC, 1985).
Tanzania	UN 1984 revision.
Thailand	Official estimate (NESDB, Thailand).
Togo	Based on child survival estimates from 1961 and 1971 census data.
Tokelau	Bank estimate.
Tonga	1980-85 estimated from CDR, 1985-90 Bank projection.
Trinidad and Tobago	1980-85 UN 1984 revision, 1985-90 Bank projection.
Tunisia	Bank estimate based on government figures.
Turkey	UN 1982 revision and Bank estimate.
Turks and Caicos Is.	Bank estimate.
Tuvalu	Bank estimate.
USSR	UN 1984 revision up to 1980 and Bank estimate based on official CDR.
Uganda	Bank estimates, based on a population growth rate of 3%.
United Arab Emirates	1980-85 UN 1984 revision, 1985-90 Bank projection.
United Kingdom	Derived from CDR = 11.4.
United States of America	Estimated, based on CDR = 8.7 or 1984 (Annual Summary Monthly Vital Statistics Report 1984 and CDR = 8.8 for 1985 (PVSR 7/86).
Uruguay	1980-85 CELADE printout 2/87, 1985-90 Bank projection.
USSR	UN Pop. Div. World Population Prospects, 1980.
Vanuatu	Bank estimate.
Venezuela	1980-85 UN 1984 revision, 1985-90 Bank projection.
Viet Nam	Bank estimate for 1980-85, then projected to 1985-90.
Virgin Islands (US)	Derived from CDR = 5 for 1985 (US/BOC, 1985).
Wake Island	Bank estimate.
Wallis and Futuna	Bank estimate.
Western Sahara	Bank estimate.
Western Samoa	US/BOC, 1985
Yemen, Arab Republic	Based on WFS.
Yemen, People's Dem. Rep.	Bank estimate to reconcile with population growth rates and rates in neighbouring states.
Yugoslavia	Derived from CDR = 9.1 for 1985 (PVSR 7/86).
Zaire	UN 1984 revision.
Zambia	1975-80 UN 1984 revision, projected to 1985-90 using Bank mortality schedule.
Zimbabwe	UN 1984 revision.

For notes and abbreviations, see Table A1.

Table B. Population Estimates, World Bank and U.N., 1985, 2000, and 2025

Countries	1985		2000		2025		Percentage Diff.
